

LANCASHIRE UNITED

THE FLEET

1900-1981

RICHARD ALLEN - MICHAEL EYRE - PETER GREAVES

SECOND EDITION

This is a second edition. Produced during the COV19 pandemic emergency as a PDF download only, it contains all updates and corrections so far discovered; these are highlighted in the text. The download is free and there are no plans to print this edition. If you would like to make a donation to the Christie Cancer Hospital that would be kind.

Readers may know that our friend and co-author Peter Greaves suffered an acute stroke shortly after the first edition was printed. He is now very severely disabled and unable to join in producing this edition.

Richard Allen, Michael Eyre, March 2020

The authors are aware of conflicts with a recent PSV Circle Fleet History covering LUT, SLT and Bangor Blue. Although the compiler of the latter was supplied with a copy of the book, all the corrections, and offers to check the work, it contains many dates, details and assertions that differ from both editions of this book and (importantly) LUT/SLT company records. Further checks of these have shown show that in all cases the book is correct.

To view the pdf as correct pairs of pages as in the printed book, set Adobe Reader to View > Page Display > tick "Two Page view" and tick 'Show Cover page in two page view'.

We are greatly indebted to the Leigh-based staff of the Wigan Council Archives Service where the majority of the LUT and SLT archives are stored and cared for. They hold a huge amount of material - for example, to find fleet lists from the 1920s, vehicle incident registers from 1919 to the 1960s, insurance records, capital and expense ledgers was something we never even dreamed of.

The LUT material that did not go to Leigh was placed in the care of the Greater Manchester Museum of Transport and we are equally grateful to Chairman Dennis Talbot, Archivist George Turnbull and the team for the museum's usual friendly and generous help.

The Lancashire County Archives at Preston allowed us access to their motor taxation records - and explained their structure and basis, leading to our discovering that in some cases not "all is what it seems to be". The Bolton Library and Museums Service and the Gwynedd County Council Archives team researched their motor tax records for us and provided a mass of copies of relevant documents. The Kithead Trust was a valuable source of more original data.

Nothing was too much trouble for these friendly and helpful professionals who patiently accommodated endless visits to their collections and were always willing to help find answers. Without them, there would be no book.

The late Eric Ogden wrote several books on LUT that, some fleet details apart maybe, have stood the test of time. Eric passed on before he might have tackled the vehicle data and if this work in some way completes what he started then we hope he would have approved. We have made good use of the late Keith Stretch's definitive work on SLT - published in 1972, it is remarkably accurate. Phillip Taylor's excellent "A Trolleybus to the Punchbowl" was a valuable source for crosschecking.

The thorough work of the late Bruce Maund provided the base material from which to assemble the developments in North Wales. We are grateful to Ken Swallow for providing copies of Bruce's notes and, as a separate task, researching the genealogy of the Edwardes, Gernaey and Gardner families.

From its formation, the Passenger Transport Executive's engineering team copied its monthly fleet change notices to the Museum of Transport's predecessor organisations. We are grateful to the PTE Directors who authorised this all those years ago and to the staff members who provided the copies monthly.

The excellent Commercial Motor on-line archive provided detailed contemporary information from the 1920s, 1930s and 1940s. The Omnibus Society gave us access to its photograph collection; the National Tramway Museum kindly provided images from its vast collection. We have consulted the relevant PSV Circle News Sheets - predictably, the mass of new information from the company's records changes things, often substantially, but that does not diminish the fine job that the Circle did with the data available at the time - for LUT it was often precious little. There are also a number of what might be termed myths of long standing; we have noted the principal ones.

We received generous help on specific, often complex, matters from Don Akrigg, David Beilby, Mike Christensen, Allan Condie, Mike Fenton, Richard Gadsby, Robin Hannay, Martin Ingle, Ted Jones, Philip Kirk, Thomas Knowles, Geoff Lumb, Geoff Lister, the late Roy Marshall, the late Alan Mills, Phil Moth, Richard Morant, Michael Russell, Jim Saunders, Peter Smalley, Ray Stenning, Mike Sutcliffe, Phillip Taylor, Bob Telfer, Peter Thompson, Peter Tulloch, Peter Waller and Jim Whiting. Lucy Frontani of Carnegie Publishing, Lancaster, did her usual excellent job on the book's layout.

Inevitably, there will be mistakes in what we have produced. We apologise for them in advance and will be grateful to be told of any that escaped the checking process - and of details that emerge subsequently.

Production of this book has been funded anonymously; all income other than distribution and postage costs will be shared between The Christie Charity for the Christie Cancer Hospital, registered charity 1049751, and the Greater Manchester Transport Society, registered charity 509772, which operates the Museum of Transport, Greater Manchester. The image copyright holders have generously waived the image fees. **A total of some £6,000 was raised for Christie's.**

CONTENTS

Although it contains some historical background and an outline of the development of the various companies, this book is principally a detailed (and hopefully complete and accurate) record of their bus, coach, tram and trolleybus fleets, compiled "ground up" from original material in the companies' and other archives. As a result it differs, very considerably in many instances, from what has been published before.

The LUT Company

Formation

Usually referred to as “LUT”, Lancashire United had its origins in Liverpool-born tramway entrepreneurs the Atherton brothers. The story of their South Lancashire Tramways involved St Helens, Liverpool and the area of south Lancashire that in time became LUT’s operating territory. There were several companies, including South Lancashire Tramways Co (not a limited company) all of which were brought together in November 1900 under the South Lancashire Electric Traction and Power Company Ltd (“SLETP”).

Some local notables backed the scheme - Arthur Stanley (son of Lord Derby) and his brother George, together with Joseph Beecham (of Beecham’s pills fame and father of the famous orchestra conductor) and E K Muspratt, Chairman of British Insulated & Helsby Cables. Although Arthur Stanley was chairman and, along with the Beechams, had a substantial investment in the company, the bulk of the money came from Scotland. The Watson family of Linwood had interests in papermaking, other tramways, power generation, Dunlop tyres and a more local business - “Watson, Steelwork, Bolton” was a name that would still be well known in the 21st century. The other major investor was Edwin Adam, an Edinburgh barrister. Engineering expertise came from London United Tramways - J R Salter was engineer and then General Manager. With him came E H (Ned) Edwardes who was in charge of the power station at Howe Bridge, Atherton, built in 1901/2.

The tramways

An outline of the development and decline of the tramway part of the company is in the South Lancashire Tramways/Transport section of this book.

Collapse and rescue

Subsidence due to coal mining greatly increased the cost of track work, money ran out, the Athertons departed and in 1904 the company went into receivership. Nevertheless, there was a good business to be built and Arthur Stanley organised a rescue and refinancing masterminded by London investment broker and financier J S Austen. The Watsons, Adam (succeeded by his brother Alfred, also an Edinburgh lawyer but with a country house in Yorkshire) and the Beechams again having major shareholdings. Harry England, who had managed the Bolton Tramways and would later manage the independent West Riding company, was also a shareholder and became an active director of LUT and a close colleague of and adviser to E H Edwardes. Harry England’s advice was taken on almost every major decision.

Registered at the end of December 1905 with an address at 9 North John Street, Liverpool, the new company was named Lancashire United Tramways Ltd. It acquired the assets of SLETP, including the subsidiary companies, the tramways and power station.

Importantly, the British Electric Traction (“BET”) group, of which Austen was a director and would later become Chairman, took a minority but always influential shareholding. Arthur Stanley resigned as a director of the BET group because of a conflict of interest but Austen’s role on the board was to represent the BET’s shareholding in addition to controlling finances. He therefore had no conflict and successfully kept LUT and the much larger BET in an amicable relationship without any real question of the BET acquiring LUT.

The team of Stanley, Austen, the Watsons, Edwin Adam and Harry England, with E H Edwardes as manager, would be the principals in the company for years to come - though financial control remained firmly in London with J S Austen.

In July 1906 the headquarters were moved to The Tramways Offices, Howe Bridge, Atherton. The tramways continued to be operated by the subsidiaries, including the South Lancashire Tramways Co, which remained with no “Limited” in its title.

Buses

Almost at once the new company bought some motor buses. Three second-hand Scott-Stirlings opened a service from Leigh to Westleigh, a route that had been the subject of abortive tramway schemes in 1896 and 1900 by South Lancashire Tramways (“SLT”) and 1903 by Leigh Corporation. Operations commenced on 16 March 1906, the service extended on Sundays from the Town Centre to the Cemetery. On 6 July when the tramway was extended at Lowton St Mary’s, a second bus service, from the new tram terminus there to Newton-le-Willows was introduced. The buses proved unreliable and expensive to run and the services were withdrawn after a few months.

Manager J R Salter died suddenly, aged 35, in December 1910 and Edwardes was appointed manager. He would remain in control of the day-to-day operations of the company for the next 45 years.

Right: The certificate of incorporation of LUT on 29th December 1905.

SLETP's debts were £600,637 and Stanley, on behalf of the founders, bought the assets from the receivers (J R Salter and J M Henderson) for £150,000. Between them Robert Watson, Joseph Beecham, Alfred Adam, Edwin Adam and Sir Arthur Stanley held about 1/3 of the debenture stock.

Below: these five plus Henderson and Salter (through his lawyer) each subscribed for one share to establish the new company, entering into an agreement to exchange their debentures in the insolvent SLETP Company for further shares in LUT, recommending the other debenture holders to do the same.

In May 1914, three Dennis charabancs were purchased but were requisitioned by the War Department some three months later. Howe Bridge works was used mainly for munitions work during the 1914-18 war period.

In 1920 LUT commenced two separate motor bus operations. Based on Atherton, the more normal one was the development of local bus services in south Lancashire. LUT bought a fleet of AEC single-deck buses and the first service commenced in June - a six-mile route linking the tram terminus at Lowton St Mary's with that at Haydock. This was followed by services in Leigh, Newton, Ashton-in-Makerfield and Golborne, together with express services to Blackpool - one from Manchester via Swinton, Tyldesley, Atherton and Wigan, the other from Eccles via Irlam, Warrington, Newton and Wigan.

Charabancs and an unusual alliance

In 1919, a very different motor bus operation had been started in Liverpool, arising from an opportunity that the board either learned from or was persuaded into by one Gustav Roberts. He had an interesting background - in addition to being in the motor trade, he had been an estate agent for some years, then in the taxi business and latterly was describing himself as an advertising agent. From records of these, there appears to have had a period of about 5 years with a business partner before problems between the partners began to develop.

At the time Roberts was principal partner in the Liverpool firm of Avery and Roberts Ltd - main agent and distributor for Dennis and Unic vehicles, it had supplied SLT with two motor cycles in 1909 and LUT's three Dennis charabancs in 1914. The firm also had a haulage business using Dennis lorries and ran a fleet of Unic taxis in the city. The partners also owned A & R (Motors) Ltd which had also run taxis in Liverpool but had been wound up in 1917.

The new LUT venture was a programme of excursions, tours to North Wales coast and mountain resorts, and private hire and contract work in Liverpool, the principal contract being with the cartel of shipping lines ("The North Atlantic Conference") to take passengers from the city's stations to the transatlantic liners. The operation and management of these Liverpool operations was unusual.

In August, LUT bought a garage in Bentley Road, Liverpool and a fleet of charabancs, which again were sourced from Avery and Roberts Ltd - but there was more to the deal than the supply of the charabancs. For reasons which are unclear the

LUT's Liverpool operation was placed under the control of Avery and Roberts Ltd, which was appointed LUT's Liverpool agent and manager.

The agreement with Avery and Roberts Ltd was for two years, renewable. Roberts was to recruit and pay the staff and expenses, Avery and Roberts companies could operate taxis in the area but not charabancs and part of the Bentley Road garage was leased to Avery and Roberts Ltd as part of the agreement. A new A & R (Motors) Ltd was then formed in 1920 to run a bus service from Portmadoc to Pwllheli from a base in Criccieth, LUT having no involvement in it. Both companies had their registered office in Liverpool - 154 Mount Pleasant and later 81 Renshaw Street, which were also used as LUT's offices in the city.

In 1919, with poor roads and a 20mph speed limit, a trip from Liverpool or the Wirral to Snowdonia or Caernarvon was at least a two-day excursion and in October 1919 a new company, Tourists' Hotels Ltd, was registered - note the plural in the word Tourists. Its purpose was to buy hotels that would then be used by passengers on LUT tours and excursions. Once again Avery and Roberts Ltd was involved, the directors being Ned Edwardes of LUT, Gustav Roberts of Avery and Roberts Ltd together with three Merseyside businessmen investors. The registered office was that of Avery and Roberts Ltd at Mount Pleasant. The new firm acquired (or bought an interest in) the Ponsonby Arms, Llangollen and the Queens Hotel, Llanfairfechan in 1920 and The Royal Goat Hotel, Beddgelert, in January 1922. Tourists' Hotels Ltd also had a "motor section" with a small fleet of charabancs with which local excursions were operated for guests who were not on an LUT tour. Roberts' business partner, Percy Avery, had left all the businesses late in 1921.

Bangor Blue

In March 1921, Bangor Blue Motors Ltd of 280 High Street, Bangor, was registered to operate local bus services and tours in North Wales. The original promoters are unclear and may have been J Fred Francis & Sons Ltd, Colwyn Bay, and J & E Roberts of Bangor. It appears to have been under funded and Gustav Roberts was involved by October, perhaps to arrange what happened next.

In January 1922 Bangor Blue was bought jointly by LUT, Avery and Roberts Ltd and Tourists' Hotels Ltd. Ned Edwardes, Harry England (LUT director and Managing Director of the West Riding Automobile Co Ltd) and Gustav Roberts then became its directors. Tourists' Hotels' motor section was transferred to Bangor Blue, and LUT and Avery & Roberts transferred some of their vehicles. Several of the "1921" Bangor Blue fleet,

probably on hire purchase, were not taken over and appear to have been returned to or taken back by their supplying dealer(s).

There was logic for LUT in the Bangor Blue acquisition for, in addition to tours, there was strong growth in local bus services. However, Gustav Roberts (and LUT) seem to have grossly overestimated the market for tours and excursions to North Wales from Liverpool, the Wirral and Lancashire. In December 1922 Tourists' Hotels Ltd became insolvent, went into liquidation and was restructured with new owners. The arrangements are unclear but the firm was still running the three hotels in 1924 and, it seems, through the war - the company was dissolved in 1948.

LUT decided to concentrate upon bus services in south Lancashire and rebuy most of the charabancs as buses, doing half a dozen each financial year. The Liverpool garage was retained for bus services and the liner traffic; Avery & Roberts Ltd continued to lease part of it for their dealing business.

Bangor Blue Motors' business expanded, with buses based in Bangor (where a substantial new garage was built), Menai Bridge, Llanfairfechan and Penmaenmawr, with services into Anglesey as well as to Bettws-y-Coed, Caernarvon, Bethesda and Deiniolen. The vehicles, some new, some used, were supplied by Avery and Roberts Ltd. In this expansion there seems to have been encouragement (and possibly funding) from the BET, through J S Austen (BET Chairman and an LUT director) and the BET's shareholding in LUT - Bangor Blue's telegraph code name was "Traction" - a word taken from the BET's title.

Bangor Blue appears to have been part of the BET's battle with Crosville. In 1925 the BET group was trying (unsuccessfully) to buy Crosville. Conversely, Crosville was trying to buy LUT and its subsidiary SLT - there were some negotiations but LUT declined to proceed.

Whatever the reasons, the Bangor Blue venture became increasingly loss making and of little relevance to LUT's interests. From 1925, buses were being licensed only a quarter at a time and Bangor Blue's manager, C P Paige (later General Manager at Bury and then Oldham) left to join Harry England at West Riding, where he became Traffic Manager. Concentrating upon its expanding bus services in South Lancashire and the need to raise finance for its new trolleybus system, LUT's directors saw no benefit in continuing to be involved in North Wales; for Gustav Roberts, on the other hand, it was a substantial source of income, not least from Bangor Blue's use of his A&R (Motors) fleet.

Some sort of crisis point was reached in mid-1927. LUT and Roberts appear to have been unable to agree on LUT's (and probably the BET Group's) wish to sell Bangor Blue to BET subsidiary Llandudno Coaching & Carriage Co Ltd, ("Royal Blue"), of Llandudno. The LUT directors (E H Edwardes and H England) appear to have decided to resolve things by liquidating (winding up) Bangor Blue, something which only needed a directors' majority vote (a sale would need agreement of at least 75% of the shareholders and could have been blocked by Gustav Roberts).

Probably as a result, supply of new Dennis vehicles by Gustav Robert's Avery and Roberts Ltd agency came to an abrupt end in June. In July two Guy B were bought and four ex-West Riding Bristols from a batch of 12 being acquired by LUT and Bangor Blue, were to have joined the fleet but did not, passing instead direct from West Riding to Llandudno Coaching.

In September 1927 the A & R (Motors) Ltd fleet was taken into Bangor Blue stock and simultaneously Bangor Blue was placed into directors' (as opposed to creditors') voluntary liquidation, the formal notice making it clear that everyone would be paid in full. Perhaps significantly, Gustav Roberts then sold A&R (Motors) Ltd's service (which was 20 miles from the Bangor base) to rival Crosville but the A&R Motors vehicles were taken by Bangor Blue.

In April 1928 the liquidator (Bangor Blue's company secretary, Thomas Threlkeld) sold the services, some buses and the trading name to Llandudno Coaching. Llandudno Coaching retained the name Bangor Blue as a distinct fleet, the whole passing to Crosville in 1931. The separate winding up of the Bangor Blue company dragged on for some years.

LUT's involvement in North Wales ended. The Liverpool private hire business more or less ceased and LUT's need for its Liverpool garage was much reduced, although the lease of part of it to Avery & Roberts Ltd continued as did LUT's use of Robert's premises as its Liverpool office, both leases having some years to run. Avery and Roberts Ltd was declared insolvent shortly after Gustav Robert's death in 1931, one of its creditors being LUT. LUT then moved to alternative office premises and retained the garage.

Expansion in Lancashire

Meanwhile LUT thrived in south Lancashire. By mid-1925 there were 21 bus services linking Leigh, Ashton-in-Makerfield, Warrington, St Helens, Bickershaw, Hindley, Culcheth, Golborne, Astley, Little Hulton, Walkden, Worsley, Westhoughton,

Padgate, Garswood, Billinge, Swinton, Irlam, Farnworth and, importantly, the massive Trafford Park industrial estate. LUT soon had running agreements with the corporation transport departments at Bolton, Leigh, Salford, St Helens and Warrington.

Links with the BET there might have been but relations with the BET's Ribble company were cool - LUT was expanding in territory that Ribble would liked to have had to itself, something not helped by differences in the style of E H Edwardes and Ribble's General Manager Major Hickmott.

Most of the expansion was organic - LUT opened and developed the routes itself. There were two acquisitions, both modest but one of great importance. Arthur Robey's small Irlam Motor Garage Co of Cadishead was taken over in 1924. In June 1925 the more valuable acquisition was when LUT took over the bus service of Trafford Park Estates Ltd, owner of the huge Trafford Park industrial estate, along with its fleet of three leased AEC double-deckers. The service ran from Patricroft, crossing the Manchester Ship Canal by the Barton swing-bridge. It was an astute move, for Manchester, Salford and North Western were already established serving Trafford Park, and this would give LUT a significant share of the important traffic to and from the industrial estate.

Buses and trams were the principal but not the only business. Howe Bridge power station supplied electricity to a wide area and for a short time the company was agent for various manufacturers including Bristol commercial chassis, Hampton cars and a number of car component manufacturers. It also offered general electrical contracting and the supply and installation of telephone systems. Power generation and supply was the most important of these and in March 1926 to reflect what were now its main businesses the company's name was changed to the Lancashire United Transport and Power Co Limited.

Agency or not, after a small number of Bristols, including the second-hand ones from West Riding, LUT's orders for new vehicles went to Leyland and this would continue until the next war - almost, for from time to time LUT would buy more Dennises - and in the 1930s would probably have bought more if Dennis had been able to offer a six-cylinder diesel engine.

Joint operation

In 1927 led by Manchester, the area's municipal operators introduced what was known as The Coordinated Motor Bus Scheme - a comprehensive network of jointly operated limited stop bus services, linking surrounding towns, principally to

the city. The scheme was open to any major operator with a defined area, provided it accepted the rules and structure. Wishing to gain lucrative access to Manchester, the two local company operators, North Western and Lancashire United, joined the scheme, which proved of great benefit to both. LUT was the first, starting in 1927 with a Bolton to Manchester service, run jointly with Salford and Bolton, in competition with the service of J R Tognarelli of Bolton.

During 1927 and 1928 services were introduced from Manchester/Salford to Warrington (joint with Salford); Bolton via Walkden (joint with Bolton and Salford); St. Helens (Salford, St Helens and Leigh) - one via Leigh & Astley, later cut back to Leigh, and one via Atherton which was extended to Liverpool in 1932; Wigan via Atherton & Hindley (joint with Salford and Wigan) and Wigan via Westhoughton (joint with Salford). The Bolton - Manchester service was extended across the city to Hyde in January 1928, bringing LUT buses into north Cheshire.

The express services were worked with single-deckers and ran to "clock-face" timetables (every 15, 30 or 60 minutes) at average speeds which often required drivers to exceed the outdated 20mph speed limit - the operators paid any fines as part of a campaign to get the speed limit increased to 30 mph. To work them, ten Bristol B were followed by a substantial fleet of Leyland Lions and on October 11th 1928 a large extension to the bus garage was opened across the road from the tramcar sheds and works at Howe Bridge. Howe Bridge could now hold over one hundred buses, with space for seventy five at Platt Bridge, Hindley, twenty five at Swinton and twenty at Liverpool.

One of the aims of the joint network was to put a stop to competition from private operators - and it worked. At the end of October 1927, in conjunction with Ribble Motor Services Ltd of Preston, the stage services of Webster Brothers, Wigan, were taken over. In December 1929 Tognarelli sold out to LUT and the Corporations of Manchester, Salford, Oldham and Bolton - his modern fleet was split between the purchasers.

By the end of 1928 the bus fleet numbered 150 plus SLT's 76 tramcars; interestingly there were no proper coaches - until 1951 LUT preferred to use single-deckers with bus-style bodies with their interiors fitted out as coaches. In modern parlance they were "semi-coaches" or "dual-purpose" but within LUT they were referred to and run as "the coach fleet".

LUT BUS SERVICES, NOVEMBER 1922

LOWTON ST MARY'S - HAYDOCK

via Lane Head, Golborne, Lowton Station, Newton and Earlestown
early am and every 2 hours
alternate with Leigh - Haydock
1 bus, 7 journeys

LEIGH - HAYDOCK

via Lowton St Mary's, Lane Head, Newton and Earlestown
early am and every 2 hours
1 bus, 10 journeys

LEIGH - WARRINGTON

via Lowton St Mary's, Lane Head, Newton and Winwick
every 2 hrs, alternate with Leigh- Haydock
1 bus, 8 journeys

LEIGH - NEWCHURCH

via Lowton St Mary's, Lane Head and Croft
Sat and Sun afternoons / evenings only pm approximately every 90 mins
1 bus, 6 journeys

WARRINGTON - GLAZEBOURY

via Culcheth, Croft and Winwick
Wed, Sat and Sun, afternoons / evenings only, every 2 hrs
1 bus, 5 journeys

WARRINGTON - BICKERSHAW

via Winwick, Newton, Lowton Station, Golborne and Abram
Wed, Sat and Sun, afternoons / evenings only, every 2 hrs
1 bus, 5 journeys

HINDLEY - WALKDEN

via Westhoughton, Chequerbent, Little Hulton
daily Mon-Sat, pm Sundays, hourly
2 buses, 19 journeys

LEIGH - WORSLEY

via Astley, Boothstown, Ellenbrook, Walkden
daily Mon-Sat, pm Sundays, hourly
2 buses, 22 journeys

ASTLEY - LITTLE HULTON

via Tyldesley
early am and every 2 hours pm Mon, Wed, Fri, Sat, Sun alternately to Tyldesley & Little Hulton, plus infrequent at other times to Tyldesley
1 bus, 12 journeys

SWINTON - WARRINGTON

via Monton, Patricroft, Irlam, Hollins Green
daily, every hour plus 30 minutes Sun to Hollins Green; 30 mins Sat to Warrington
3-4 buses, 34 journeys

The Swinton - Warrington service frequency indicates how important it was for LUT to buy Robey's rival service and eliminate any competition.

Frequencies and times are summarised.

Long distance express services were also developed. From 1929 jointly with North Western, LUT operated the Manchester to Liverpool via Warrington service and jointly with North Western and Ribble what became the famous X60/X70 to Blackpool. Ribble was strongly opposed to LUT's gaining a share of this, which did nothing to improve relations between the two. The Liverpool express service was incorporated into the "Tyne – Tees – Mersey pool" in 1932, taking LUT vehicles to Middlesbrough and Newcastle upon Tyne. The original Newcastle on Tyne - Liverpool service, had commenced in 1928, operated by BET-group company Northern General. The pool grew to include several more major operators, principally North Western, United, West Yorkshire and Yorkshire Woollen District.

With the railways aggressively buying bus companies, it was not surprising that the London Midland and Scottish Railway Company made an offer to buy LUT. It was rejected and LUT remained independent, the BET group still having its minority but influential shareholding.

Trolleybuses

A further stimulus to the exit from North Wales was the decline of the tramways and a decision to raise finance to convert them to trolleybuses. This was done and the South Lancashire Transport trolleybus system was to become something of an icon in its own right, not only in its inter urban character but also that most of the original fleet of Guy trolleybuses survived to the last days of the system

in 1955-1958. The story is covered in the South Lancashire Tramways part of this book.

The 1930s

LUT now had a firmly established operating area in south Lancashire, roughly bounded by Bolton, Westhoughton, Wigan, Ashton-in-Makerfield, Haydock, Earlestown, Warrington, Irlam, Patricroft, Swinton and Farnworth, plus that important entry into Trafford Park. Over half of the services were jointly operated involving one or more of fourteen other operators. Works' services formed an important part of operations, with over one hundred regular workers' services covering fifty-plus factories and collieries. The works journeys and services to the Trafford Park industrial estate alone grew to require some fifty buses. In May 1930 the area was slightly extended into the Irwell valley when the bus services of William Lees Limited of Radcliffe were purchased jointly by Bury Corporation and LUT.

Until 1938 LUT's buses had not displayed service numbers, although these were shown in timetables.

Commencing in 1937 with the TD5 67 and TS8 141 batches service number indicators were fitted using backlit metal cutout stencils rather than roller blinds although the latter had replaced stencils for destination displays with the 1933 deliveries. Wartime 255-257, 260-319 had roller blind destination indicators and stencil service numbers and new vehicles 1946 onwards had all roller blinds. Many vehicles retained stencil indicators - the last were in use in 1963.

Another feature of the LUT fleet was the three small white lights (for the three letters of LUT) fitted into the front of the body, usually below the indicator box, to enable passengers to identify an LUT vehicle at night. This started with the 1929 vehicle intake and (apart from the wartime vehicles) continued on half-cab single-deck buses and all double-deckers until the introduction of Manchester-style indicators. The practice was not unusual in the area - Wigan's buses had two green lights and many pre-war Ribble vehicles had a translucent red "Ribble" sign in the front nearside bulkhead window.

The Oldham to Blackpool service operated by M & H Motors was purchased jointly with Ribble and North Western in January 1935 and in 1938 Ribble and LUT bought the business of Arthur Christy of Bolton, no vehicles passed to Lancashire United.

Vehicle policy remained firmly Leyland - with a return to Dennis when a batch of Leylands proved troublesome and a test purchase of two Guys. Double-deck bodies were from Leyland with single-deckers from the Trafford Park firm of Davidson, until that company got into difficulties, after which Roe became the chosen single-deck supplier. The war changed all that.

Wartime

In addition to Trafford Park, there was a huge industrial base across LUT's operating area - heavy engineering, collieries, chemicals, textiles, clothing, batteries, aircraft, diesel engines (LUT served Gardner's works at Patricroft). All became vitally important for the war effort, with many workers on shift work and dependent upon LUT's services. Some 18,000 people worked at the huge new Royal Ordnance Factory at Risley and LUT's services to and from the site came to require 50 buses.

A further Royal Ordnance Factory at Chorley and the new RAF (later the United States Air Force) base at Burtonwood added to the demands. In Trafford Park, the Ford Motor Co built two massive new plants on what became Barton Dock Road, all for high volume military aircraft work. It alone had 30,000 workers and the huge Metropolitan Vickers plant nearby had even more.

LUT needed dozens of extra buses quickly. The Regional Transport Commissioner arranged to draft

in over 70, on hire from operators with reduced requirements or spare vehicles. These were soon supplemented with new, wartime-specification Guy Arabs and a few Daimlers.

Family matters

E H Edwardes came from a titled family, based in the Axminster and Bridport area of Somerset, where there are family members to this day. His grandfather was William, the second Baron Kensington, whose son, the Rev Hon Thomas Edwardes, was E H Edwardes' father. The Edwardes had four sons and two daughters and through them LUT became something of a family affair. Son William worked for LUT becoming area manager at Atherton and then superintendent at Swinton; he left the company in 1946. Another son became a vicar in Bridport.

In 1939 August Gernaey married the Edwardes' elder daughter, Barbara. He worked for English Electric, moving to engine component maker Wellworthy at its Salisbury works at the start of the war. In 1949 he became LUT's Chief Engineer.

At St Mark's Church, Worsley on 1 October 1942, Eleanora, the younger daughter of Mr E H Edwardes and the late Mrs Edwardes, of Booths Hall, Boothstown, married Hugh, the elder son of Mr & Mrs Joseph Gardner, of The Coppice, Leigh Road, Worsley. Hugh later took over from his father as Chairman and Managing Director of Gardner.

The government's arrangements for bus production during the war resulted in LUT being allocated the rugged Gardner-engined Guy Arab chassis, some with steel-framed Northern Counties bodies. When the war and government controls on vehicle purchases ended, it was not long before LUT turned to Gardner-engined Guys - the alternative was Daimler but LUT was not willing to tolerate the extra fuel consumption resulting from its fluid flywheel transmission. Gardner engines were in great demand but the family connection meant that LUT would always get what it needed.

A contributory factor was the retirement on the last day of 1945 of W J Wilson - the long serving Rolling Stock Engineer (LUT's then title for its Chief Engineer), who had favoured Leylands. He had been unwell for some time and a caring LUT paid for all his medical treatment and arranged for him to retire with a much enhanced pension. His replacement, another long serving member of the staff, was R Hampson, who ordered a mix of Leylands, Dennises and Guys. Sadly he died suddenly in 1948.

His replacement was E H Edwardes' son-in-law, August Gernaey, who was appointed Chief Engineer on 12 April 1949. The Guy / Gardner / Northern Counties combination then became LUT's standard double-decker. LUT's operating territory was largely flat and the Gardner 6LW was specified for double-deckers, even the 30ft-long Guy Arabs. Only one Arab had a 6LX engine - fitted to LUT 27 it was a prototype engine that actually belonged to Gardner. On loan to LUT, it stayed with the bus all its service life and after.

The board of directors changed too. In 1941 it was much as it had always been - Sir Arthur Stanley (chair), E H Edwardes (managing director), J S Austen, Harry England and J H Watson. Austen passed away in 1942, England died in 1945 and in their place came Worsley-born Sir Joseph Nall (whose companies had interests in power generation, haulage and transport), and BET director J M Birch, replacing Austen as BET representative on board. Stanley died in 1947 and was replaced as chairman by E H Edwardes.

The company's business altered significantly on 1 April 1948 when the country's electricity supply industry was nationalised. The Howe Bridge power station was then run on behalf of the national grid and direct supply of power to customers ended. On 25 November 1948 the company name was changed from Lancashire United Transport and Power Co Limited to Lancashire United Transport Limited.

After the initial venture with charabancs, the excursions and tours business was not really developed, although LUT remained strong in private hire, especially for works outings and the like. Long distance services were worked by the "coach" fleet of dual-purpose vehicles often duplicated by service buses, and until 1951 the company bought no proper coaches. In 1951 a fleet of 10 Guy Arab coaches with unusual Roe coach bodies was purchased and LUT began to build up a fleet of full coaches.

Gardner-powered Atkinsons joined the fleet in 1952, some with high capacity "standee" Northern Counties bodies intended for the heavily used

services into Trafford Park, which were restricted by a low bridge in Eccles. The wartime Guy Arabs were also invaluable for the many works services and rather than rebody them, as many operators did, LUT chose to rebuild almost all, retaining their original shape and many original features.

Changes

E H Edwardes retired at the end of March 1955, having worked for the company since 1902. The selection of his replacement was not harmonious. It is clear that he expected his son-in-law Chief Engineer Gernaey to be appointed "on the nod" but the other directors disagreed. Their view was that LUT's operations and methods needed updating and improving.

First they insisted on additional names being added to the short list - Frank Lythgoe, then General Manager at Middlesbrough Corporation but a former LUT man, and C W Wroth, General Manager of Potteries Motor Traction, were added to A H Gerneay, W G Hunniball, Assistant to the General Manager of Ribble and Manchester Corporation's Chief Engineer Cyril Oakham. With Edwardes declining to vote, the other directors selected Cyril Oakham. Although LUT needed modernising, it was a sad end to Edwardes' reign for he had been highly respected in the industry. He passed away later in the year.

With A H Gernaey remaining as Chief Engineer, things would not be straightforward for Cyril Oakham. Nevertheless, he modernised LUT's operating methods and procedures - and profits. More obviously, but less importantly, he ordered vehicles that drew heavily on Manchester Corporation's specification. The front and side indicator display was changed to that of Manchester's and indicator blinds used Manchester's unique typeface. Initial vehicle orders went, Manchester pattern, to Daimler, Leyland and Metro-Cammell. So much so that Daimlers 570-593 looked almost exactly like Manchester vehicles, prompting a local newspaper to suggest that the expansionist Manchester Corporation had taken over LUT.

Oakham faced a considerable challenge in updating LUT and some changes were not welcomed. Inadvertently they were not helped by his order for 24 Daimler CVG5s with centrifugal clutches instead of fluid flywheels. Chosen to avoid the extra fuel consumption caused by a fluid flywheel transmission, the clutches never worked properly and when combined with the 7.0-litre 5LW engine, on-the-road performance was bad. Conversely, the 14 Leyland PD3s were liked by road staff but their fuel consumption was much more than that of a 6LW-engined Guy Arab. A return was soon made

to Guy Arab/Northern Counties, although with Guy not offering a suitable single-deck chassis and Atkinson out of the bus market, orders for the latter went to Leyland and AEC. Along with the Guys there were some further forward-engined Daimlers, again not with fluid flywheel transmission, and, more satisfactory, a growing number of Daimler Fleetlines.

At the top of Oakham's agenda was SLT. The trolleybus system's infrastructure needed replacement, as did the veteran fleet of Guy and Leyland trolleybuses. Although Cyril Oakham had a track record of trolleybus design at BUT and operation at London, Newcastle and Manchester, it was clear that there was no economic option other than to replace the system with motorbuses; the programme of rebuilding of the veteran fleet was stopped. The trolleybus system was converted over the years 1956 (St Helens route) to 1958 (the Leigh, Bolton and Farnworth routes) and the SLT company was then wound up.

The change was not without trouble when Leigh demanded a share in the replacing diesel bus service to Bolton. Greatly affronted, LUT at one stage stated that it would retain its trolleybuses rather than give in. The matter was eventually resolved with concessions on both sides, a side effect being Leigh's purchase of Dennis Loline.

Old its system may have been but SLT was profitable and had a considerable cash reserve. This was used to buy 46 new motor buses in 1955/56/57. Numbered 542-563, 570-593 in the LUT fleet, they were owned by SLT, whose name they carried as legal owner. They had the Lancashire United fleetname and were not restricted to working SLT services, although 570-581 were initially allocated to Hindley for use on the former trolleybus service to St Helens. Their ownership was changed to LUT as SLT's existence ended.

In something of an echo of past times, some Dennises joined the fleet in 1959 and 1960. They were Gardner-engined Loline, prompted by a need for double-deckers on the 20 (Farnworth - Patricroft - Cadishead) service, which served Gardner's works but was restricted by the low bridge at nearby Patricroft Station. Service revisions in mid-1960 resulted in the 20 being diverted via Eccles avoiding the low bridge; the Loline were then transferred to an extended service 14, which now passed under the low bridge to terminate at Patricroft.

The Fleetlines had Gardner 6LX engines, as did the sole Guy Wulfrunian. Three of the latter were ordered, the first a forward-entrance 30ft model and the other two the version with a front-positioned axle, full-width cab, conventional rear platform

passenger entrance and a 6LW engine. Having received the first, which quickly proved very troublesome, the order for the other two was cancelled and two 6LW-engined Arabs substituted.

Diversification

An unusual, if short lived, venture came in 1960 when LUT bought a Bolton-based garage business, with agencies for Daimler cars, Rootes Group cars and commercials, Massey Ferguson tractors and Renault cars; it also ran a heavy recovery service, sold horseboxes, small boats and outboard boat engines. Waterloo Motors (Bolton) Ltd was run for just over three years but failed to perform to expectations and was sold at the end of 1963. The idea was a business hedge against the drop in bus use in favour of private cars and appears to have originated with Cyril Oakham.

In March 1963, LUT purchased the Atherton, Hindley Green and Tyldesley licences of the long-established local coach firm, Stringfellow Brothers of Wigan, ("Silver Queen Coaches"), Stringfellow then concentrating upon its business in Wigan. Two Bedford coaches were included in the deal but were not used by LUT. The new Leyland/Plaxton coaches that LUT later bought were finished in red and grey livery, a combination that was later applied to the whole fleet - buses and coaches.

Oakham leaves

In March 1964 Cyril Oakham's time with LUT ended in a bitter dispute with his fellow directors, possibly related to the Waterloo Motors business and / or some organisational changes. It was a shame, for under his guidance LUT's operations had been vastly improved and transformed into one of the most profitable bus companies in the country. Under the settlement for his termination, diplomatically arranged as retirement, he received a substantial cash sum for loss of office and other benefits. He left the bus industry to develop his interest in the motor trade and car dealerships. His replacement was Robert (Rob) Bailey, then Traffic Manager of Potteries Motor Traction.

LUT continued to buy Guy Arab double-deckers until they ceased to be available. Vehicle policy then changed to high capacity single-deckers - widely adopted in south Lancashire and Merseyside but not in the Manchester area. In stark contrast to the Guy Arab/NCME policy, the single-deckers came from a variety of chassis and body manufacturers - AEC Swift, Bristol RE, Bristol LH, Seddon RU and Leyland Tiger Cubs, with bodies from Plaxton, Alexander, Marshall and Willowbrook in addition to Northern Counties. Since 1959 a few Atkinsons had been adapted for one-person operation on less arduous duties but one-person operation remained modest. From

September 1967 a few of the busier services were converted to single-deck one-person operation and most of the single-deck fleet was thus equipped but union opposition ensured that there would be no Manchester-style wholesale move to one-person.

The Passenger Transport Executive

The 1968 Transport Act set up the South East Lancashire and North East Cheshire ("SELNEC") Passenger Transport Executive, which on 1 November 1969 took over the municipal bus operations of Manchester, Salford, Ashton, Bolton, Bury, Leigh, Oldham, Ramsbottom, Rochdale, Stockport and the Stalybridge, Hyde, Mossley and Dukinfield Joint Board. The PTE had the responsibility to organise and coordinate all road and rail transport within its area - and this included substantial parts of both the area's large company operators - North Western and LUT.

Whilst the North Western problem was fairly easily solved, albeit by the draconian step of breaking up the company and moving the "non-PTE" parts to the adjacent NBC-owned Trent and Crosville companies, dealing with LUT was not so simple. First it was privately owned and the shareholders were at liberty to sell it to anyone at whatever price they could get. Second there was at the time a legal snag that prevented the PTE from owning a limited company. Third, almost half of LUT services were outside the PTE's area but with the local government reorganisation planned for 1974, this would change when the Metropolitan County of Greater Manchester was created and the boundary was extended to include Wigan.

Fourth, and most importantly, was that LUT's working practices differed from those of the PTE constituents. Like several company operators (but not North Western) LUT had moved to a five-day week for platform staff, with weekend working covered by voluntary overtime. All the PTE constituents, including North Western, worked to a seven-day week rota system. Within this, there was a myriad of detail differences and rationalising these was a major task - bringing in LUT's different system would almost certainly cause great disruption.

Something had to be devised which brought LUT services under PTE control and which, when the time was right, ensured the PTE could take over LUT at a sensible yet fair price. The PTE Directors' solution was ingenious.

First in 1970 was an agreement to consolidate existing agreements and coordinate services with those of the PTE. This was followed in March 1971 by an agreement between the PTE and LUT retrospective to January 1 by which Lancashire

United was to pay to the PTE all stage carriage service revenue generated within the PTE's area; the PTE would determine fares and frequencies of the co-ordinated services, which would be managed and operated by LUT with LUT staff and vehicles. In return, LUT would be paid agreed operating costs plus an agreed percentage profit.

On the face it was a sweet "can't lose" deal for LUT but the sting was in the tail - the PTE would have the unilateral option to purchase the share capital of Lancashire United on or around 31 December 1975. The ingenious part was how this last was to be achieved such that the PTE could be sure of a fair price and would not be held to ransom if in the meantime the shareholders received an attractive offer from, say, an asset stripper.

In 1972 a new company, Lanaten Limited, was formed. Its sole purpose was to acquire all of the share capital of Lancashire United Transport Ltd. Lanaten would be owned by third party, nominated by the PTE which also would arrange and guarantee a loan enabling Lanaten to buy all the LUT shares.

The nominees were Mr & Mrs H G Lewis of Cardiff. The Lewis family had wide industrial interests but the key was that they owned coachbuilder Northern Counties, which the family had started in 1919. It was the PTE's chosen supplier of bus bodies and, because of the very large orders, Northern Counties' business depended upon the PTE, nicely locking the Lewis family into the deal.

Early in 1972, using the bank loan guaranteed by the PTE, Lanaten made an agreed £2.5m bid for all the LUT shares, a condition of the 210p/share bid being that the PTE would have the option to purchase all of the share capital of Lanaten (and thereby LUT) for £2,608,310, or such other agreed and audited figure, on or after 1 January 1976. H G Lewis would join the LUT board, which would continue to run LUT as an independent operation until the option was exercised. The PTE already owned 8% of the shares.

Commercial & Financial
**LUT soar
to 200p**
NEWS of a 210 bid for Lancashire United Transport, from Lanaten, hoisted the LUT price from last night's closing level of 165 to around 200 on the Northern Stock Exchange today.

This done, in December 1972 a further operating agreement was made between the PTE, LUT and Lanatan. Similar to the previous one, it pooled all LUT operations with the PTE's area or future area. Importantly, LUT was to now to operate in accordance with PTE policies. LUT's services were renumbered into the PTE's series in March, April, May and June 1974 although, as LUT remained a separate entity, some services were still jointly operated by LUT and PTE buses. In March and April 1974 there was an initial exchange with Crosville and Ribble of service mileage that would be outside the shortly-to-be-created Greater Manchester Metropolitan County, Ribble transferring mileage to the Merseyside PTE at the same time. LUT then closed its Liverpool office and no longer garaged vehicles at Merseyside's Edge Lane depot.

Greater Manchester

On 1 April 1974, the Metropolitan County came into being and the SELNEC PTE became the Greater Manchester PTE, its operational area extended to include the borough of Wigan. The legal problems concerned with the PTE owning a limited company were resolved in the creation of the Metropolitan County.

The LUT board's independent vehicle purchasing policy, which had brought in the fleet of Plaxton-bodied Seddon RUs and continued with more Bristol REs and Leyland Leopard single-deck buses, had not extended to double-deckers. The few that were bought were Northern Counties-bodied Fleetlines to the PTE's standard design, although they differed in being 33ft-long rather than the PTE's 31ft standard. In 1974, however, Fleetline delivery times were very lengthy and needing a sizeable number of new double-deckers, the board placed an order for 45 Bristol VRs. The PTE promptly intervened; it had inherited an order for 25 VRs from North Western, which it had unsuccessfully tried to cancel, and wanted no more. It reversed the board's decision, cancelled the order and added 45 Fleetlines to its own contract.

In December 1974 the PTE, LUT, Crosville, Ribble and National Travel (North West) agreed (amongst other things) a defined area for the PTE and LUT operations that were outside the GMPTE area - principally Newton le Willows, Haydock and Burtonwood. Ken Holt who started his career at Manchester Corporation, was manager of the PTE's Southern Division and had then become Controller of PTE Service Operations, moved to LUT to prepare for its integration into the PTE.

All was now in place for the PTE to exercise its option to purchase Lanatan (and thereby LUT) for the agreed price, which it duly did. On 1 January

1976 Lancashire United Transport Ltd became a wholly owned subsidiary of the Greater Manchester Passenger Transport Executive with Ken Holt as its General Manager, Rob Bailey moving to another assignment with the PTE.

Working practices and trade union attitudes still differed such that the plan to number LUT's new Fleetlines in the PTE series had to be given up and when, in 1978, the fleet began to be painted in the PTE's orange and white livery, the arrangement of the colours was arranged to differ from that of the PTE. The fleetname became "Lancashire United Transport" alongside the PTE's "M-blem" logo.

To accelerate LUT's introduction of one-person operation of double-deckers, the PTE bought twenty former London Transport Daimler Fleetlines from dealer Ensign - it was less costly than overhauling and transferring some former Manchester Fleetlines.

Absorbed into the PTE

There was never any doubt as to the final outcome and, the various problems with working practices and other matters having been resolved, on 1 April 1981 Lancashire United Transport was merged into the PTE with no structural change. In April 1982 it became part of the PTE's West Area with Ken Holt as Area Managing Director. Vehicles were painted into PTE livery as they became due for overhaul.

The Lancashire United Transport Ltd company was then made dormant. When Greater Manchester Buses Ltd was formed on 26 October 1986, the company was reactivated as the travel agency subsidiary of Greater Manchester Buses Ltd. The travel agency ceased trading on 30 June 1990 and the company was again made dormant.

After privatisation the Lancashire United name was reused by companies with no connection to the original firm, the PTE, Greater Manchester Buses, or anything in this book.

The surviving non-PTE Standard Daimler Fleetlines and Guy Arabs were renumbered into vacant spaces in the PTE's 2000-series, formerly used for the ex-Manchester Daimler Fleetline Mancunians, which were numbered up to 2304. The non-PTE Standard and ex-London Fleetlines were numbered from 2305 (usually by adding a 2 prefix to the LUT number), followed by the surviving Guy Arabs, which started at 2451. The Daimler Fleetlines with PTE Standard bodies were numbered 6901-6990 - previously used for ex-Leigh Corporation double-deckers; the PTE's standard Fleetlines and Atlanteans had started at 7001. Coaches were numbered into the PTE's Coaching Unit series, starting at 33. The Leyland

The 1957, 1968 and May 1973 timetable covers - the largely orange cover of the 1973 edition showing the PTE's increasing influence.

Nationals were renumbered to follow the PTE's existing National fleet, starting at 206.

The only LUT single-deckers with fleet numbers that clashed the PTE's existing stock were some of the Seddon RUs, which duplicated existing former-North Western Bristol REs. The Seddons were renumbered, taking numbers of other "non-clashing" RUs that had been withdrawn for sale. The fleet numbers of the other LUT single-deck buses were left unaltered. Some forty-odd LUT vehicles which had been withdrawn from the LUT fleet but were still in stock also passed to the PTE and retained in store, often for some time. These were not renumbered.

Although the ex-LUT fleet generally stayed at LUT garages, vehicles began to be transferred amongst the other PTE garages and vice versa.

Deregulation 26 October 1986

Having built a very good integrated bus network for the County, there was huge political resistance in Greater Manchester to deregulation. **In a few years** it wrecked the area's integrated network of bus services, the foundations of which had been laid back in 1927-1930. It was replaced by a mess of worse services, many worked unreliably by under-funded and inexperienced new operators, several running old and badly maintained buses, to opportunistic (and often difficult to find) timetables. It took over ten years to restore some sort of order.

On 26 October 1986, the PTE's operations and fleet were transferred to a new company, Greater Manchester Buses Ltd ("GMB"), which had been registered in February 1986, but not all the surviving LUT vehicles passed to GMB.

Uncertainty in the winning of contracts for services and an existing fleet surplus caused the PTE's fleet to be reduced by some 500 buses, including many former LUT ones. Withdrawn before Deregulation Day these were retained by the PTE, although it no longer had an operating fleet, and did not pass to Greater Manchester Buses Ltd. This created a reserve to cover for GMB's extra needs if contracts were won; in the event most were sold.

Sale of surplus vehicles

Although they were licensed and insured in its name, much of the PTE's fleet was leased - some in an arrangement made with or through major dealer Kirkby Central Ltd, whose bus and coach operation was based in South Anston, Yorkshire. About that time the group, which owned Kirkby Central also owned coachbuilder Plaxton and the bus and coach dealing business, was renamed Plaxton Coach Sales for a time.

Anticipating the large number of surplus vehicles, in July 1986 the PTE (as opposed to GMB) set up a joint venture with Kirkby Central / Plaxton to dispose of them - inter alia minimising the lease termination costs to the PTE. The joint venture was named Kirkby Bus Sales and Leasing Ltd ("KBSL") and almost all the surplus vehicles passed through it, although when awaiting sale, vehicles usually remained on the PTE's or GMB's premises. Which part of the Kirkby Group handled a sale was complex - for example, the former GMT vehicles that went to London Transport in 1978 were supplied by Plaxton Coach Sales Ltd. In many cases the new owner did not actually buy the vehicle but either assumed the existing lease or arranged a new one.

More importantly, the PTE's existing restriction on the onward sale of vehicles to operating companies was removed and in more than a few cases this led to the unfortunate state (for GMB) of a modern vehicle that had been in the PTE's operational fleet only a month or so before, being sold to an operator that competed with GMB - and promptly appearing on a rival service.

A new radio control system, introduced in October 1992, was unable to handle fleet numbers above 7999 and one consequence was that the former LUT Fleetlines numbered 69xx were renumbered into the 49xx series by changing the initial digit from a 6 to a 4.

Privatisation in 1994 and 1996

After considerable argument and intense local political resistance, the government forced Greater Manchester Buses Ltd to be split into Greater Manchester Buses North Ltd ("GMBN") and Greater Manchester Buses South Ltd ("GMBS") and sold to the highest bidder. The former LUT operating area became part of the North company. **Still part of the PTE, the companies became operational in March 1993, assets were transferred on 19 December 1993 but argument over their sale continued. Eventually at midnight on 31 March 1994 (effectively 1 April 1994)** both were sold to their existing employees and management. Viewed by some as contrived deals, neither lasted long.

GMBS was bought by Stagecoach in February 1996 (sale date 27 February 1996, date of transfer 18 March 1996) and became Stagecoach Manchester; vehicles were repainted into group livery. GMBN was bought by FirstBus (sale date 25 March 1996, date of transfer 1 April 1996) and traded as First Greater Manchester using a tomato red livery. In May 1998 it was renamed First Manchester Ltd still using the tomato livery, subsequently adopting the First Group corporate lilac, grey and magenta livery. Former LUT vehicles figured in both fleets.

Fleet Numbering

Fleet numbers were used from the start of bus operations, using a simple chronological series. When the Dennis charabancs were rebodied as buses the fleet was renumbered (several times) to group the Dennis charabancs together, then those rebodied as buses, then the small Fiat, Unic, Daimler and Ford charabancs. The Austin Landaullets were numbered separately.

There were several smaller instances of renumbering, many not previously recorded, caused it seems by chief engineer Wilson's wish to keep similar vehicles in groups.

The series had reached 205 in 1930. From 1930 until 1941 fleet numbers filled gaps when a sensible sized gap became available, again with segregation of vehicle types. A new series for double-deckers was started at fleet number 28 and the remaining Dennises were again renumbered to clear a space. Through the 1930s the double-deck series continued to 98, single deckers continuing from 206 to 246. The gap 1-27 was then filled with new single-deck buses and from 1937 101-40 were used for dual-purpose vehicles (LUT's "coaches") and 141 onwards for single-deck buses.

Garages

The Tramway Offices, Howe Bridge, Atherton
1901 tram depot, overhaul works and power station. Head office, "The Tramway Offices", built 1905. Garage across the road for buses and charabancs from 1914.

New bus garage built on opposite side of road 1928; original bus garage became workshops. Original tram depot used for trolleybuses from 1930.

Bus garage extended twice more. Trolleybus depot converted to bus workshops 1960. Passed to Greater Manchester PTE, GM Buses and GM Buses North. Closed 7 February 1998.

Platt Bridge, Hindley
New as tram works and depot, 1902. Little operational use 1919-1927. Operational for tram service and buses 1927. Converted for trolleybuses from 1930. Extended 1932 to house more buses. Passed to Greater Manchester PTE. Closed 23 March 1986.

Swinton, Partington Lane
Purpose built as tram depot, 1907. Charabancs from 1920, buses from 1922. Converted for trolleybuses 1931. Extended for buses 1931.

In 1938 the series for dual-purpose vehicles reached 140 and some "short term" renumbering of older vehicles was done, seemingly in anticipation that the older vehicles would be withdrawn within a year. War then intervened and with the need to retain every serviceable bus, the surviving Leyland Lions and TD1s were again renumbered into the block 183-224. As with previous instances, an accurate record of these changes has not previously been known.

New wartime vehicles continued from 247. Fleet numbers 182-206 were re-used after the war but with the change of Chief Engineer, gap filling was given up and new vehicles were numbered in a straight series.

Fleet numbers reached 657 in 1958 and then recommenced at 1; the new series had reached 616 when the fleet was absorbed into the PTE fleet. The second-hand former London Transport Fleetlines, acquired in 1980, were numbered 318 to 337, which had become vacant on the early sale of the fleet of Bristol LHs. When the fleet was merged into that of the PTE in 1981, double-deckers, coaches and some single deckers were renumbered into the appropriate parts of the PTE's numbering system.

Passed to Greater Manchester PTE and to Greater Manchester Buses.
Closed 23 November 1991.

5-7 Bentley Road, Princes Park, Liverpool
Former carriage and cab depot, acquired in August 1919 from the Liverpool Carriage Co through Avery and Roberts Ltd. Initially used for charabancs and managed by Avery and Roberts Ltd on behalf of LUT. 1919-1931 part leased to Avery & Roberts Ltd for taxi and vehicle dealing activities.

Taken over 16 October 1940 by the government for munitions work, 1940-1945; handed back to LUT June 1948 but not reopened until April 1951. Then used for vehicles on the Tyne-Tees-Mersey service, the Manchester and St Helens stage services and some works journeys.

Closed 2 October 1966, the three single-deckers and one double-decker were then housed at Liverpool Corporation's (later Merseyside PTE's) Edge Lane garage. This ceased on 26 April 1974, when area services were reorganised by the PTEs.

Irlam

From December 1924 LUT continued to rent the garage used by Robey; vacated in the last quarter of 1929.

Winwick

Warrington Road / Newton Road - rented fenced yard for vehicles on service 79 and some works

services. Opened during the 1956 Suez Crisis as fuel saving measure. Closed 1964.

In 1959 plans were made to build a modest garage there and a field in Mill Lane, Winwick, was bought for the purpose; idea abandoned 1961.

Livery

The various arrangements of the livery are shown in the pictures of each class of vehicles in the lists.

1906

Cream and brown.

1919-1921

Pale grey.

1921-1941

Charabancs - grey

Single-decker buses – red with white window frames and roof, lined out in gold and black, with black mudguards. Red roof for 1940 deliveries. The paint was finished with coats of varnish, which made the white colour look slightly cream.

LUT “coaches” (single-deckers fitted with coach seats) had a white flash on the side, the pattern varying on different deliveries.

Double-decker buses and trolleybuses – red with white bands above lower deck windows and below upper deck windows, white roof, red rear dome on double-deckers (some delivered new with white domes); lined in gold and black; black mudguards.

From 1935 (commencing with TD4s 49-58) double deckers had red roofs, making the double-deck livery red, with white bands above the lower-deck windows and below the upper-deck windows; black mudguards.

The gold and black lining out was progressively reduced and ended in 1934/35, the black lining then being only for edges between white and red.

1941-1945

Varied according to the availability of paint. Some were delivered in the 1939 livery but with a grey roof. Others were all grey with black wings; most repaints were all red with black mudguards and mid-grey roofs. Most vehicles had their white roof areas painted grey.

1946-1950

Single-deckers – red, black mudguards, white around windows, grey roof. New Roe-bodied single-deckers had a red band above side windows. Double-deckers – red, white bands as pre-war, grey roof and rear dome, black mudguards.

The “express service” double-deckers, 385-394 had the grey of the roof extending down the front upper-deck corner panels, the window pans being finished in red; black mudguards.

1950-1951

The “express service” double-deckers (Guys 425-436 of 1950 and Fodens 447-449 of 1951) were in a similar livery to 385-394 but with a thin black line instead of white bands; black mudguards.

Some double-deck repaints were similar and others were in a simple all-over red with a grey roof with a thin black line some four inches below the upper deck windows. A few were all red, also with the thin black line.

1951

From 450 onwards and for repaints the double-deck livery became all red with one primrose yellow band between decks; black mudguards (where applicable); double-deckers with “new look” engine cowl had red front mudguards

Single-deck buses red with a single primrose yellow band below windows, (where applicable) black mudguards.

Coaches – red with black roof and mudguards.

There was no black edging or lining. Repaints of older single-deck types into this livery appear to have been delayed for a year or two and few pre-war vehicles were thus treated.

Sans serif fleet numbers were introduced in August 1953.

1955

Coaches and dual purpose single-deckers from 552 and coach repaints - primrose with red flash, or red roof and band below windows, according to style of body; red or primrose mudguards according to body style. Dual-purpose vehicles downgraded to bus work were repainted in bus livery.

The 1960 NCME-bodied semi-coaches had red skirts instead of red roofs and this was applied to the Duple- and Burlingham-bodied semi-coaches on repaint.

1965

Following the acquisition of part of the Stringfellow coach business in 1963 new full coaches were finished in Stringfellow’s livery of grey and red; existing coaches and semi-coaches remained in primrose and red.

1966

Single-deck buses – red with a broad primrose yellow band below windows.

1970

Grey replaced primrose on single-deckers and existing double-deckers.

The 1971 Fleetlines had a grey band above the lower deck windows - it did not extend round the front of the body. Subsequent Fleetlines were red with grey between decks (from above lower deck windows to below upper-deck windows) and the 1971 Fleetlines were altered. This livery was not applied to earlier vehicles.

1974

Grey and red reversed for the new dual-purpose Bristol REs. Early batches of Leyland Nationals were delivered in London Transport red, later batches were delivered in white and painted into livery (often by Northern Counties).

October 1978

PTE orange and off-white. Due to differing working practices and to avoid potential labour disputes, the arrangement of the livery differed from the PTE's standard.

Services 1973

Motor bus services were numbered in a series that commenced in 1937 when LUT motor buses began to be fitted with service number indicators. Before that, the "service numbers" shown in the timetable were effectively "table" numbers in the manner of railway timetables. SLT's trolleybus services never had service numbers; St Helens had used 1 for the Atherton - St Helens joint service and this was adopted on conversion to motor buses. Joint operators are shown *italic*; sometimes (service 39 for example) the joint operators had few or no duties on a service, trading mileage for journeys on other routes. 4 was a Warrington Corporation number,

Double deckers - orange and white arranged in the existing LUT layout with orange replacing red and white replacing grey. LUT's earlier and acquired Fleetlines were repainted in this livery. No Guy Arabs were repainted, remaining red and grey.

Single-deckers - Plaxton bus bodies all over-orange; others - orange with a white roof.

All carried a fleetname consisting of the PTE's "M-blem" logo and the words Lancashire United Transport.

Coaches were repainted in the PTE's standard "Charterplan" style, colours of white, with red and yellow striping being used for the LUT fleet.

1981

When LUT was merged into the PTE on 1 April, the livery became the PTE's standard brown, orange and white.

51A, 51C, 52C, 53C were St Helens, 224-227 were Manchester, W10 was Wigan 10 and 309 etc Ribble. In 1974 LUT services with numbers that duplicated those of GMPTE services elsewhere were renumbered into gaps in the PTE's series for Bolton and Leigh (5xx) and Wigan (6xx). Where possible this was done by adding a 5 or 6 prefix to the existing number. Those being transferred to **Crosville**, Ribble and Merseyside PTE were not affected. Note also that service 23, although shown in the LUT timetable, had been cancelled some years previously.

Arrangement of the lists

Vehicles are shown by year and in fleet number order. Because LUT usually ordered vehicles for delivery in the operating year (April - March), vehicle deliveries often spanned a calendar year end. Each batch is kept as a unit even if delivery was split across calendar years.

The columns are:

Fleet number, registration number, chassis number, body number (column omitted if no body number), date new, date withdrawn, date sold, to whom vehicle sold.

The symbol **Θ** after a fleet number indicates there is a picture of that vehicle on the same or nearby page.

The industry-standard description for body and seating is used: H = highbridge, L = lowbridge, B = single-deck bus, DP = dual-purpose single-deck, F- prefix to either = full front. Seating: top deck/lower deck for double deckers. Entrance position F = front, R = rear, C = centre, D = dual doors; RD = rear with platform doors (double deck only).

Date new

The “new” date is the month in which the vehicle first ran in service or was licensed for such use; if a vehicle was stored for some time before entering service this is noted.

Withdrawn date; sold date

LUT and SLT (but not the PTE) recorded a vehicle as ‘withdrawn from the fleet’ on the date it was sold by the company although it could have been delicensed and out of service for weeks, months or even years in some cases. For this reason the lists show two dates - “withdrawn” is the month the vehicle last ran in service and the “sold” date is the month in which it was sold.

LUT (unlike the PTE) recorded a vehicle as delicensed (withdrawn) as the first day it was out of service and not the day it last ran. Thus, an LUT vehicle delicensed on the last day of, say June, would be recorded as “withdrawn July 1st”. Where possible the former have been corrected to the PTE-style date.

LUT and SLT often retained delicensed (“withdrawn”) vehicles against late delivery of new vehicles and sometimes as a source of spares.

It was LUT’s practice to sell withdrawn buses once (sometimes twice) each year to dealers and, until this event, withdrawn vehicles would often be kept in the spacious yard at the south end of Atherton bus garage.

However, a vehicle recently withdrawn might not have been included in the sales list and would remain in stock until the next sale.

Much of the LUT coach fleet, including some of the dual-purpose single-deckers, was delicensed from the end of October until Easter.

Vehicle sold to ...

The firm or individual to which LUT sold the vehicle is given at the right hand end of each vehicle data line, after the withdrawn and sale dates. Names are abbreviated; there is a list of the complete names and locations at the end of the book.

Subsequent owners

Brief details are given of subsequent owners, other than intermediate dealers, sufficient to show the vehicle’s history in full, without going into details of fleet numbers, licensing etc by those owners, which are best found by reference to publications on those fleets. Likewise changes of corporate entity that did not affect the vehicle’s operation.

A vehicle that passed to another bus or coach operator (PSV or not) is shown with that operator’s name in **bold**.

Company names

These are abbreviated to single or two words. A list of the principal company names in full is given at the end of this book.

Dealers’ names

Other than those to which LUT sold a vehicle, the lists do not give details of dealers through whose hands a vehicle passed en route from one operator to another.

Barnsley bus dismantlers

Where a vehicle was sold to one or other of the bus dismantlers scattered around the general Barnsley area, it has proved difficult to define clearly and unambiguously which dealer actually scrapped / handled which vehicles; we have therefore used the generic term “Barnsley area breaker” for them all.

Many of the sales to such dealers are annotated “no further trace” or “scrap”. In the 1960s and 1970s there was a strong market in the Far East for used Gardner engines, many being fitted to boats. Dealers removed the engine and sold it on to the Far East; the rest of the vehicle then being scrapped or sold to a breaker for scrapping. This combination could often make more money than selling the complete vehicle for further use as a bus.

THE LUT FLEET

⊙ after fleet number = nearby picture

1906

1-3

Chassis: Scott-Stirling 14 hp
Engine: petrol
Body maker: Brush (so far as can be determined)
Body type: B--R
Supplied by: Scott-Stirling & Co Ltd

New in 1905 to the London Power Omnibus Co Ltd, "Pioneer", London, registered LC 2610-2612; too small for the traffic, they had become surplus.

Hired by LUT from their chassis maker on a trial basis with an option to purchase, they were issued with new registration numbers in Bolton - BN 139 was a re-issued mark - and from 16 March the first was used to open a service from Leigh Town Centre to Westleigh (St Paul's), followed by a tramway feeder service from Lowton St Mary's to Newton-le-Willows in July.

1	⊙	BN 139	not traced	16/3/06	21/9/06	see below
2	⊙	BN 276	not traced	4/06	21/9/06	see below
3		BN 275	not traced	4/06	21/9/06	see below

The vehicles proved unreliable, services ceasing on 21st September. The option to purchase was not taken up and the buses were returned to their maker. After modification and repaint, for which LUT had to pay, they eventually passed to the owners shown below, who reimbursed LUT for the unexpired hire period.

Subsequent owners:

BN 139	passed to Ortona Motor Co Ltd, Cambridge, 7/07; withdrawn c1914
	AJ Young and Co, Newmarket, lorry, 12/15
BN 275	passed to Motor Supply Co, London, 12/07, registration cancelled 2/16
BN 276	passed to Ortona Motor Co Ltd, Cambridge, 7/07; void 12/15

Upper: LC 2610 with Pioneer in London in 1905.
 Lower: BN 139 and BN 276 in Cambridge city centre when running for Ortona.

1914

The next attempt was a trial operation of charabancs on tours but this was short lived when the chassis were requisitioned by the War Office in August 1914. LUT was allowed to keep the bodies and in 1915 a quote was obtained from Daimler for four replacement chassis but permits for delivery before the end of the war could not be obtained and the three charabanc bodies were then sold to Trinity Garage, Halifax.

The three vehicles had been supplied by Liverpool-based Avery & Roberts Ltd but were registered in Manchester by their body maker.

Chassis: Dennis (type not known)
Engine: White & Poppe 40hp 4-cylinder petrol
Body maker: (Manchester-based, probably Harry Jackson & Co, Manchester)
Body type: 28 seat charabanc
Supplied by: Avery & Roberts Ltd

			new	taken	
-	NA 1805	3751	5/14	8/14	chassis to War Dept, body sold
-	NA 1806	3763	5/14	8/14	chassis to War Dept, body sold
-	NA 1807	3761	5/14	8/14	chassis to War Dept, body sold

Subsequent owners:

Chassis requisitioned by the War Department 8/14
 Bodies sold to Trinity Garage, Halifax, 26/6/15

1919

1

Chassis: Unic M10
Engine: Unic 4-cylinder 2-litre petrol
Body type: 14-seat charabanc
Body maker: not traced
Supplied by: Avery & Roberts Ltd
 Appears to have also had an interchangeable lorry body, which was sold 6/19

1 > 37 0 KB 344 **2551** 4/19 end/28 end/28 scrapped by LUT
 4/24: renumbered 37 in the 'small charabanc' block

2-13

Chassis: Dennis 3-ton "Subsidy A"
Engine: Dennis 4-cylinder 40 hp petrol
Body maker: Charlesworth Bodies Ltd, Coventry
Body type: 28-seat charabanc
Supplied by: Avery & Roberts Ltd
Rebodied: B 8665/7/72/3/5/6 English Electric ("EEC") B29F 1924, slatted seat backs, later B28F
 B 8666/9/70 Ransomes, Sims & Jefferies ("RSJ") B28F 1927, upholstered seats (body numbers 619-624, order not determined)
 B 8668/7/1/4 not rebodied

Contemporary reports by E H Edwardes state that the chassis were ex-WD. Built at the end of the war (maybe after) they appear to have been ordered by and supplied to the War Department but almost certainly never used by it, and possibly never delivered. They appear to have been bought back (or retained) by Dennis Bros from whom Avery & Roberts sourced them.

All but four of the Dennis charabancs bought in 1919 and 1920 (q.v.) were rebodied as buses - 7 intended to be by British Commercial ("BCLE") in 1922 (in the event BCLE become insolvent and LUT finished the one BCLE had part built and itself built the other 6), 6 by Strachan and Brown ("S&B") in 1923, 12 by English Electric ("EEC") in 1924 and 6 in 1927 by Ransomes, Sims and Jefferies ("RSJ"). The English Electric bodies are believed to be the first bus bodies built by that firm.

When the English Electric rebodding was done the charabancs and Dennis buses were renumbered to group vehicles of similar type and body together; further renumbering was carried out in 1927, again to place the RSJ buses in a group and keep the remaining Dennis charabancs together. The renumberings are not easy to follow and resulted in some numbers being unused; they are shown with individual vehicles' details; there is also, after vehicle 60, a summary of each year's changes.

The EEC and S&B fixed-roof rebodied Dennises were altered to 28-seat c1926/7, this appears to have been due to some local authorities' hackney licensing rules not allowing seats in front of an emergency exit - they had a centre-rear emergency door with a seat attached to it (picture on later page). There are lists showing the rebodies as having 30 or 32 seats and some pictures show 32-seat hackney plates. The latter appears to be use of a standard-issue plate; the 30-seats appear to be a simple error.

B 8668 was one of the four not rebodied as a bus.

Supplied by:	Avery & Roberts Ltd
Rebodied:	B 8774-6 Strachan & Brown, fixed roof, B29F, 1923, slatted seat backs, later B28F
	B 8765/8-71/3 English Electric B29F, 1924, slatted seat backs, later B28F
	B 8766/7/72 Ransomes Sims & Jefferies B28F, 1927, upholstered seats
	batch body numbers 619-624, order not determined

A further order was placed with Avery and Roberts Ltd for 12 more Dennises. As with the first 12, contemporary reports by E H Edwardes state that the chassis were ex-WD. Built at the end of the war (maybe after) they appear to have been ordered by and supplied to the War Department but almost certainly never used by it, and possibly never delivered. They appear to have been bought back (or retained) by Dennis Bros from whom Avery & Roberts sourced them.

In 1923 23-25 (and 26-28 of the 1920 batch) were rebodied by Strachan & Brown ("S&B") and their fleet numbers were revised to place the different types of body into blocks of fleet numbers. The four Strachan & Brown which had fixed roofs (B 8774/5/6, TB 1157) were placed together as 24-27; the two with "roll top" Strachan and Brown bodies (TB 1100/1) became 28 and 29. Numbering and renumbering to place similar vehicles in adjacent number blocks became a feature of LUT's fleet under Rolling Stock Engineer W J Wilson.

Six more of this batch were rebodied in 1924 by English Electric. When this rebodding was done the charabancs and Dennis buses were again renumbered to group vehicles of similar type and body together; further renumbering was carried out in 1927, again to place the RSJ buses in a group and keep the remaining Dennis charabancs together.

The EEC and S&B fixed-roof rebodied Dennises were altered to 28-seat c1926/7, this appears to have been due to some local authorities' hackney licensing rules not allowing seats in front of an emergency exit - they had a centre-rear emergency door with a seat attached to it. There are lists showing the rebodies as having 30 or 32 seats and some pictures show 32-seat hackney plates. The latter appears to be use of a standard-issue plate; the 30-seats appear to be a simple error.

Interior of one the English Electric rebodies.

B 8777 was a Daimler lorry which was never owned by LUT or SLT, although LUT and SLT did have some Daimler lorries in addition to the charabancs. Its being adjacent to B8765-8776 is a coincidence.

Subsequent owners:

TB 1098, 1099

A further order was placed with Avery and Roberts Ltd for 2 more Charlesworth-bodied Dennis charabancs for Tourists Hotels Ltd. They were never LUT property and did not run for LUT or receive LUT fleet numbers. Registered TB 1098/99, full details are in the North Wales section of this book.

26-36

Chassis: Dennis 3-ton "Subsidy A"
Engine: Dennis 4-cylinder 40 hp petrol
Body maker: Charlesworth Bodies Ltd, Coventry
Body type: 28-seat charabanc
Supplied by: Avery & Roberts Ltd
Rebodied: TB 1100/1: Strachan and Brown B29F 1923 roll top, upholstered seats, luggage area
 TB 1157: Strachan and Brown B29F 1923 fixed roof, slatted seat backs, later B28F
 TB 1159: British Commercial Lorry & Engineering ("BCLE")/LUT B29F 1922, slatted seat backs later B28F
 TB 1160-5: LUT B29F 1922, slatted seat backs, later B28F
 TB 1158: not rebodied

In November 1919 a fourth and fifth order, this time for two and then ten Dennis charabancs, was placed with Avery & Roberts Ltd. The first two were TB 1100/01 but the final order was reduced to nine (TB 1157-65) and the registration obtained for the tenth was then used on the Orwell battery-electric lorry (see below). The final order (TB 1157 onwards) had the radiator mounted higher and, consequently, a flat rather than sloping bonnet.

It quickly became clear that there was insufficient year-round work for the fleet of charabancs whereas there was ample opportunity for bus services and 30-36 were the first to be rebodied - to LUT's own design distinguishable by the long front canopy. The contract was given to BCLE but that firm was in increasing financial trouble. It became bankrupt early in 1922 having finished only one - number 30. The bodies for 31-36 were built by LUT at Atherton using materials and parts bought by BCLE for the work. The materials and parts were actually bought from British Tractors Ltd, which was part of the BCLE group and not yet insolvent.

In the following year, 26-28 were rebodied by Strachan & Brown, two having that firm's patented "roll top" body in which each of the passenger section's roof panels were finished in canvas which would be rolled up to the central longitudinal roof frame, opening sections of the roof to the air; they were for and used on the Blackpool service in summer. **When required, luggage space appears to have been arranged by reducing the seating, either by removable or fold-up seats.**

Their fleet numbers were revised to place the four fixed tops (B 8774/5/6, TB 1157) together as 24-27 and the two roll tops (TB 1100/1) as 28 and 29. In 1924 when further Dennises were rebodied by EEC, the unrebodyed TB 1158 became 1 in a block with the other 28-seat charabancs and the previous number 1 (Unic KB 344) becoming 37 in a block with the "small" charabancs.

The BCLE, LUT and S&B rebodied Dennises were altered to 28-seat c1926/7, this appears to have been due to some local authorities' hackney licensing rules not allowing seats in front of an emergency exit - they had a centre-rear emergency door with a seat attached to it (picture on previous page). There are lists showing the rebodies as having 30 or 32 seats and some pictures show 32-seat hackney plates. The latter appears to be use of a standard-issue plate; the 30-seats appear to be a simple error.

TB 1159 with its new body - started by BCLE it was almost finished when the firm became insolvent; LUT took it and finished the work.

TB 1166

Ransomes, Sims & Jefferies "Orwell" battery electric tipping lorry, new 7/20

Often listed as a bus - an error caused, it seems, by misreading of its chassis number which was B 14, it was a battery-electric tipping lorry with trailer. Owned by and licensed to SLT it was used for ash removal at Howe Bridge Power Station. Details are in the Sundry Vehicles section of this book.

37

Prior to becoming LUT's Liverpool agents, Avery and Roberts had a fully-funded contract from the "Transatlantic Conference" (an association of liner owning companies) to take liner passengers (mainly emigrants) and their luggage from hotels and boarding houses to board transatlantic liners to the United States. Avery and Roberts had used two Minerva lorry-buses for this work, fitted out with some seats and a large space for luggage, until the service stopped due to the war.

By the time liner traffic resumed in 1920 Avery & Roberts had become LUT's agents. Within its agreement with LUT the firm was not allowed to operate buses or charabancs and the provision of vehicles for the liner contract passed to LUT. KB 1886 appears to have been bought and registered by Avery and Roberts on behalf of LUT for use on the contract. It was followed shortly by TB 1236 (fleet number 60).

Recorded in the LUT fleet as a coach in 1920, KB 1886 was licensed as a 14-seater and seems to have been bodied as a "lorry bus", following on from the Avery & Roberts Minervas. Sometime between 1921 and the end of 1923 its use as a bus ended and it was used solely as a lorry; its fleet number then lapsed and it was referred to in LUT's records as the "Liverpool Daimler". In 1925 it was fitted with a tipping lorry body and transferred to the SLT service fleet; it was replaced at Liverpool by AEC 45.

Chassis: Daimler short wheelbase CK
Engine: Daimler 4-cyl 22hp petrol
Body maker: not traced
Body type: 14-seat lorry-bus
Supplied by: Avery & Roberts

37 **KB 1886** not traced **12/19** **-/24** **SLT lorry**
12/19: supplied and registered by Avery & Roberts
6/20: put into use, taxed as 14-seat hackney
By 1/24: used solely as lorry, fleet number lapsed - vehicle known as "Liverpool Daimler"
-/24: use in Liverpool ended
6/25: transferred to SLT sundry fleet & fitted with tipping lorry body

38-44

Chassis: FIAT 15ter
Engine: FIAT 53A 4.4-litre 40hp petrol
Body maker: 38-42: Harry Jackson & Co, Openshaw, Manchester
43-44: British Commercial Lorry & Engineering
Body type: 14-seat charabanc
Supplied by: James Haworth, Manchester

The Fiats were not planned. An order was placed for seven 14-seat Austin charabancs but Austin was unable to deliver and instead a similar number of reconditioned ex-War Department FIAT chassis was obtained. Unusual as it may seem, the army had a substantial fleet of Fiat's "15ter" model - "ter" is an abbreviation for the Italian word *terzio*, which translates to "third" or, in UK terms, "Mark III". The FIATs were not subject to any renumbering or rebodding; their registration numbers appear to have been obtained in anticipation of rather quicker delivery than was actually achieved.

44	TB 166	Morris, Hindley, goods/hackney, void 1930

The front bulkheads of the bodies on the Fiats were subject to some rebuilding.

Left is Jackson-bodied 38 when new.

Right, also when new, is BCLE-bodied 43.

Below is BCLE 43 with BCLE 44 behind. Both have a rebuilt bulkhead and 43 has also been fitted with a larger windscreen.

Loading liner traffic at Liverpool in 1921. AEC 48 with its Hora body followed by 47 with 46 bringing up the rear - all with rear-entrance bodies before rebuilding.

45-47

Chassis: AEC YD
Engine: Tylor 4-cylinder 45 hp petrol
Body maker: British Commercial Lorry & Engineering
Body type: B30R
Supplied by: British Commercial
Rebuilt: B29F by BCLE, re-entering service 10/21
 Bodies again rebuilt by LUT, 1926, seating altered to B28F

Although an order had been placed for ten AECs with BCLE front-entrance bodies, delivery was not expected until the middle of the year and with the rapid growth of the Liverpool liner traffic contract, for which buses rather than charabancs were found to be needed, LUT bought three "stock" AECs from BCLE. They had rear entrance bodies, which were rebuilt to front entrance by BCLE as soon as LUT had sufficient vehicles to allow this. All the BCLE bodies on AECs had to be rebuilt again during 1926, the general manager reporting that BCLE's bodies had been badly built using poor materials.

From new their principal work appears have been as "the Liverpool coaches" for the liner contract. From 1922 the coach fleet accounts were kept separate from those for the buses and show 45-47 in coach fleet use on the contract thus: 45 in 1928/9, 46 in 1923, 1925-29 and 47 in 1923, 1927-9. They were possibly in a special livery and without fleet numbers.

45	○	TB 1123	not traced	4/20	1/31	early/31	sold to dealer
			10/21: rebuilt B29F by BCLE				
			-/26: body rebuilt by LUT

47	○	TB 1125	not traced	4/20	1/31	early/31	sold to dealer
			10/21: rebuilt B29F by BCLE				
			-/26: body rebuilt by LUT				

Subsequent owners:

The dealer converted them to lorries.

45	TB 1123	Gore, Leigh, lorry, void 1931
46	TB 1124	Rollason, Gornal, lorry, void 1933
47	TB 1125	Phibbs, Knutsford, lorry, void 7/34

The style of fleet number shows this picture of 45 was taken in 1928. Note the "Guard" badge on the cap of the uniformed crew member - a left over from tramway uniform. There is a myth that LUT, like Manchester Corporation, called its platform staff guards rather than conductors but this was not the case. Like most other operators, they were "conductors"; 'guard' was only used for SLT tram crews.

Having decided to start a bus service to link the tram service termini at Lowton and Haydock, the delay in delivery of AECs 50-59, caused LUT to buy two more AECs, 48 and 49. The first, numbered 48, appears to have been a Hora demonstration vehicle which had been used to gain orders for Hora bodies from Liverpool and Wallasey Corporations. The excessively long rear overhang and the passenger seats by the driver were the reason for its rebodying. The second, number 49, was acquired as a chassis and sent by LUT to BCLE to have a body built.

48

Chassis: AEC YC
Engine: Tylor 4-cylinder 45 hp petrol
Body maker: E & H Hora, London
Body type: B33R (30 in saloon, 3 in seats alongside driver)
Supplied by: British Commercial
Rebodied: B29F by BCLE, re-entering service 10/21
Rebuilt: body rebuilt by LUT, 1926, seating altered to B28F

48 O TB 1229 16025 5/20 5/29 6/29 sold to dealer
 10/21: Hora body scrapped; rebodied BCLE B29F
 -/26: body rebuilt by LUT

Subsequent owner:

48 TB 1229 Summerfield and Thomas, Kings Lynn, lorry, void 1933

Number 48 before and after:-

Right: with its Hora body.

Below: with its new BCLE body.

49

Chassis: AEC YD
Engine: Tylor 4-cylinder 45 hp petrol
Body maker: British Commercial using BMMO design
Body type: B29F
Rebuilt: body rebuilt by LUT, 1926, seating altered to B28F
Supplied by: chassis bought from Harris Motor Co
Body changed: Strachan & Brown body, late -/29 or early -/30, probably from one of 65-67 (see notes below)

The BCLE body was to a BMMO (Midland Red) design. Through the BET Group's shareholding in LUT, LUT was allowed to buy a set of drawings from BMMO and paid a royalty of £10 per vehicle to BMMO. The result differed from the BMMO body in not having a deeply domed roof.

All the BCLE bodies on AECs had to be rebuilt again during 1926, the general manager reporting they were badly built using poor materials. In late -/29 or early -/30, 49 (along with later AECs 52 and 55) was fitted with a Strachan and Brown body, from 1923 Bristols 65-67. It seems likely that this was a convenient way of maximising the vehicles in service; 65-67 were withdrawn ahead of the other three of the batch (68-70) and converted to LUT/SLT service vehicles (q.v.).

49 TB 1427 14748 8/20 5/30 6/30 scrapped by LUT
Late/29 or early/30: Strachan & Brown B30F from one of 65-67

This BMMO (Midland Red) body, for which LUT bought drawings and a licence, was the basis of the BCLE bodies built for LUT one of which is pictured below.

50-59

Chassis: AEC YD
Engine: Taylor 4-cylinder 45 hp petrol
Body maker: British Commercial using BMMO design
Body type: B29F
Supplied by: British Commercial
Rebuilt: body rebuilt by LUT, 1926, seating altered to B28F

The AEC chassis were newly built and not ex-War Department. The BCLE bodies were to a BMMO (Midland Red) design. Through the BET Group's shareholding in LUT, LUT was allowed to buy a set of drawings from BMMO and paid a royalty of £10 per vehicle to BMMO. The result differed from the BMMO body in not having a deeply domed roof. There was unexpected delay in their delivery due to mounting financial problems at BCLE - the firm was petitioned for insolvency in December 1920.

Registration B 1013 was from a series re-issued by Lancashire Tax in 1920/21, there was no special significance in it getting this number.

The bodies proved to be of poor construction - BCLE had used inferior materials - and they were rebuilt by LUT in 1926/27. In late -1929 or early 1930, 52 and 55 (along with AEC 49) were fitted with Strachan and Brown bodies from 1923 Bristols 65-67. It seems likely that this was an expedient to maximise vehicles in service - 65-67 were withdrawn ahead of the other three of the batch (68-70), and converted to LUT/SLT service vehicles (q.v.).

60

Chassis: Daimler CK (short wheelbase)
shown thus in LUT and Lancashire Motor Tax records, rather than type CM
Engine: Daimler 4-cylinder 22hp petrol
Body maker: British Commercial
Body type: 23-seat charabanc
Supplied by: British Commercial
Rebodied: Davidson DP20F 1929 (coach seats in bus shell)

Before the arrival of the ten AECs, 50-59, two short wheelbase Daimler CKs were bought for the Transatlantic Conference partners' meeting in 1920. 37 (KB 1886) and charabanc TB 1236, which took the next unallocated fleet number - 60. Buses were more suited to the actual liner contract and TB 1236 became part of the LUT charabanc fleet. It was renumbered into the "small charabancs" group as part of the renumbering associated with the 1924 EEC rebodilying of the Dennis buses and later fitted with pneumatic tyres.

It was rebodied in 1929 with a new Davidson 20-seat body for private hire work requiring a small vehicle and, although outwardly a bus body, LUT listed it as a coach - its new fleet number being in the "coach" series.

60 > 36 > 1 ○ TB 1236 3608 Ch23 5/20 10/35 7/36 Hitchen, Chorley, scrap

4/24: renumbered 36

5/29: re-entered service having been rebodied Davidson DP20F, renumbered 1

TB 1236 (left) with its charabanc body and (right) with its Davidson body.

Myths

There have been published references to the following:

25 ?	?? 1232	AEC YD	British Commercial	B32F	-/21	by 2/22
26 ?	?? 2572	AEC YD	British Commercial	B32F	-/21	by 2/22

They were never in the LUT or associated fleets; whoever's they were, if they existed at all, they did not have BCLE bodies.

1921

○ after fleet number = nearby picture

Austin 1 Austin 2

Chassis: Austin 20/4
Engine: Austin 4-cylinder 3.6-litre petrol
Body maker: Austin
Body type: "Grosvenor" 6-passenger Landulet
Supplied by: Lookers Ltd, Manchester

These provided smaller "coaches" for individual hire or to avoid use of a larger coach in making up the size of the party. Both were available for hire but were licensed as hackney or private at various times, TB 4076 was licensed as a private car for SLT from 1922 to 1929. They were heavy motor cars (rather than public service vehicles) under the 1930 Road Traffic Act.

TB 4075 or TB 4076.

British Commercial

The grandly-named British Commercial Lorry & Engineering Company Ltd ("BCLE") had a brief life which could be summarised as "ambition exceeded resources". The company was registered in 1915 with a capital of £60,000 and an office at 11-12, Finsbury Square, London. Its purpose was to manufacture or deal in lamps, motor lorries, cycles, etc. Its shareholders were all London based but the offices were almost immediately moved to Cross Street, Sale, Manchester with its managers a Mr Knox-Gilchrist and a Mr Leadbetter who lost no time in promoting the company's capabilities. Its principal offices were then moved to 66-68 Bridge Street in the centre of Manchester and it rented a works in Ashburton Road, Trafford Park, which it named The County Motor Works.

It first dealt in second hand vehicles, claiming to be the North of England agent for AEC and to have "introduced" some 500 second-hand vehicles into the market. The "County" lorry chassis was announced in 1916 which the firm built itself using some bought in components, although the 45hp engine was of its own manufacture. A range of four models was offered for net loads of 2½, 4-, 5- and 6-tons. Few were sold. In 1918 it was also building 5-ton trailers for the Ministry of Food and in 1920 was building farm tractors, one of which it entered in the ploughing trials at Lincoln in that year, forming a company named British Tractors Ltd using the same office and works as BCLE. These were followed in 1919 by the Duplex Light Car. An 8-cylinder tourer, it retailed at £375-£415 guineas and appears to have been made for the Blenheim Motor Co of London. Its engine had two banks of 4 cylinders, side by side; not surprisingly, few were sold.

Early in 1920 it acquired a coach works in Whalley Range and commenced building charabanc and bus bodies, its most notable order being the 22 bus bodies and 3 charabancs for Lancashire United. It also gained orders for bus bodies from Manchester (2) and Stockport (2). Although the contemporary press lauded the construction and finish, after a couple of years LUT's General Manager was reporting that they were not well built and used poor materials. Having paid for cars which had not been built, Blenheim petitioned for BCLE's insolvency in December 1920.

By the end of 1921 BCLE had run out of money. The bus bodies in work for LUT were taken unfinished by LUT which finished the job at Atherton. LUT bought the materials BCLE had in stock for the rest of the order - from British Tractors Ltd as BCLE was bankrupt - and built the bodies itself. BCLE and its associated companies ceased trading and were struck off the Companies Register in 1924 having failed to provide financial returns for the past three years.

Stockport Corporation's AECs DB 1662/3 had two of the first BCLE bodies.

Towards the end of 1920 BCLE built a demonstrator on an AEC chassis - in this picture it carries BCLE's trade plates.

35 and 36 became vacant in the following month when TB 1164/65 were transferred to Bangor Blue; they were not re-used until the 1924 renumbering resulting from the Dennis/EEC rebodies.

Outside Manchester Town Hall on a private hire in 1923, a line of four rebodied Dennises - two Strachan & Brown "roll tops" and two English Electric plus several Dennis charabancs.

Renumbering as a result of rebodding the Dennises

Mid-1923 after Strachan & Brown rebodding

In what would become something of a "style" for the fleet, the fleet numbers of 23-29 were revised to place the four fixed tops (B 8774/5/6, TB 1157) together as 24-27 and the two roll tops (TB 1100/1) as 28 and 29. The Austin landaulets were not affected.

April 1924 after EEC rebodding

The large charabancs were numbered 1-10. The English Electric rebodies 12-23, 11 being left vacant. The small Unic, Ford and short Daimler were renumbered into the vacant 35-37, bringing them next to the Fiats. Fleet number 60 became vacant.

Late 1930

To allow the new Leyland TD1s to be numbered 28-37, the surviving Dennises were renumbered to make a "surviving Dennis block", 6-17. The choice of 28-37 for the TD1s appears to have been made at a time when more of the Dennises were still in stock.

1922

Ø after fleet number = nearby picture

-- > 35 > --

Chassis: Ford TT 1-ton
Engine: Ford 4-cylinder 3,610cc
Supplied by: chassis from Avery & Roberts Ltd
 body obtained locally by LUT
Body maker: Walter Shepherd
Body type: 14-seat "Dixie" lorry-bus

Ford TT Dixie similar to TB 7868.

The name "Dixie" was originally given to a wider track Ford pick-up made in the USA up to 1917; after 1919 in the UK the name became (mis)used for the T or TT chassis when fitted with a "lorry-bus" body - this had three rows of removable seat pairs (making 12 seats), plus two by the driver. The seats were readily removable and some or all could be quickly removed enabling use of part as a lorry for example for luggage. The roof was also removable. The body was made by a local coachbuilder and was not a Ford product. Based at Liverpool, TB 7868 appears latterly to have been used principally for the transatlantic liner traffic.

-- > 35 > -- **TB 7868** **5405073** **1/22** **(late)/30** **scrapped by LUT**
 1/22: no fleet number
 4/24: numbered 35 in the "small charabancs" block
 12/29: no fleet number but remained in the operating bus fleet

61-64

Bought from: Liverpool Corporation Tramways
Chassis: AEC YC
Engine: Tylor 4-cylinder 45 hp petrol
Body maker: E & H Hora, London
Body type: B32R (29 in saloon, 3 in seats alongside driver)
Rebuilt: B29F by LUT, shortly after acquisition
 altered to B28F 1926/7

Hora-bodied AEC when new to Liverpool Corporation.

Four relatively new AECs were bought from Liverpool Corporation which was disposing of a sizeable batch of them having revised its plans for motor bus operation. KB 1983 had originally been registered KB 1970, this having been being changed in 8/21 when Liverpool fitted it with the body from **KB 1983**. The purchase price per bus was £400.

The unusual seating alongside the driver and their excessively long rear overhang caused their immediate rebuild

61	KB 1983	13286	new 10/19	4/22	3-5/29	6/29	dealer
62	KB 1985	13340	new 7/19	4/22	3-5/29	6/29	dealer
63	KB 1987	13352	new 7/19	4/22	5/30	6/30	dealer
64	KB 1989	13351	new 7/19	4/22	3-5/29	6/29	converted to SLT tipper lorry

Myth: Bolton hackney records show them licensed to SLT in 1922. This was a clerical error; they were always licensed by LUT.

Subsequent owners:

61-63 were converted to lorries by the dealer. The were probably other owners after conversion and before the final owner shown

61	KB 1983	Smith and Blackwell, London, N1, lorry, 6/30; void 1938
62	KB 1985	Untraced owner, Stoke upon Trent, lorry, scrapped 1934
63	KB 1987	Pulford, Farnworth, lorry, 8/30; void 1947
64	KB 1989	sold c/34, later to owner in Wigan, void 1936

1923

⊙ after fleet number = nearby picture

From this date, LUT bought its new vehicles directly from the chassis and body manufacturers

65-70

Chassis: Bristol 4-ton
Engine: Bristol BW 5.99 litre 4-cylinder petrol
Body maker: Strachan & Brown
Body type: B30F

In addition to LUT/SLT's main businesses of tram and bus operation and electricity supply and installation, for a short time LUT became a sales agent for Bristol vehicles. TC 3780/1 were originally numbered 68, 67 and were changed after a few months to be in correct sequence - it appears to have been a simple mistake in fitting the registration plates. This change was not carried into the Lancs Motor Tax records which consequently record the disposals incorrectly.

3981

1924

Ø after fleet number = nearby picture

71-72

Chassis: Bristol 2-ton
Engine: Bristol EW 3.6-litre 4-cylinder petrol
Body maker: Bristol Tramways, Brislington Works
Body type: B20F

These were LUT's first buses fitted from new with pneumatic tyres, which were later retrofitted to most of the fleet. Some of the Fiats, Daimler and Dennis charabancs had been fitted with NAP balloon (cushion) tyres in 1919-1922; the single deck bus and charabanc fleet was converted to pneumatic tyres in 1926-1927.

Known as "Baby Bristols" the 2-tonners proved too small for LUT's services and had a short life as buses. Both were converted to service vehicles in which guise they ran for LUT for much longer.

71 Ø	TC 9786	0226	11/24	late/30	converted to LUT service van 5/31; sold c1938
72	TC 9812	0227	11/24	5/29	converted to LUT service van -/29; withdrawn 1945, scrapped

Subsequent owner:

71 TC 9786 Holden, showman, Rochdale, void 1947

60

Taken over with business of A Robey (Irlam Motor Garage Co), Irlam, 12/24

Chassis: AEC YC
Engine: Tylor 4-cylinder 45 hp
Body maker: British Commercial
Body type: B29F, altered to B28F c1926

The purpose was to acquire Robey's Swinton - Cadishead service, LUT had run Swinton - Warrington since 1922 and this purchase gave LUT control of services to Irlam and on to Warrington. The price paid was £2,100 including one vehicle, which was taken into the LUT fleet. It took the vacant fleet number 60, conveniently next to the other AEC buses. The garage was rented and used until the last quarter of 1929, either one or two vehicles being kept there.

Distinctive Bodywork.

We have exceptional facilities for the production of bodywork of all kinds. Our shops are laid out for dealing with large orders and we have one of the largest stocks in the country of naturally seasoned timber.

Our long experience enables us to offer bus bodies in which the design, materials and workmanship are of the highest class and the numerous repeat orders we have received afford ample testimony to the excellence of our products.

BUS BODIES

We are at all times ready to submit quotations for all varieties of body—double-deckers, saloons, etc., either designed by us or built to customers' own specifications.

RANSOMES, SIMS & JEFFERIES, LTD.,
 Orwell Works, Ipswich.

83-85

Taken over with the bus service of Trafford Park Estates Ltd, Trafford Park

The three buses had been supplied to Trafford Park by AEC Ltd on a hire purchase agreement. Similar to two for Manchester Corporation, their bodies were by Fry Brothers, Greenwich, sub-contracted by AEC and to London General design. On 19 April 1925, LUT took the buses, operating the service on behalf of Trafford Park Estates until the legal transaction dated 29 June 1925 - the date has been wrongly quoted as the 27 June. The hire purchase agreement, remained with Trafford Park Estates and LUT paid Trafford Park the hire purchase fees, the balance being paid off at the end of 1927.

TB 7888-90 were numbered 1-3 by Trafford Park Estates and ran with these numbers under LUT control from 4/25 until the formal take-over. LUT's first double-deckers, unlike the later Leviathans they were not retro-fitted with pneumatic tyres.

Chassis: AEC S-type
Engine: AEC 4-cylinder 5.1-litre petrol
Body maker: Fry Bros, Greenwich (sub contract from AEC Ltd, to London General design)
Body type: O26/28R open staircase
Acquired: operationally 19/4/25, formally acquired 29/6/25

Trafford Park Estates Ltd, The Estate Office, Trafford Park Road, Trafford Park

Trafford Park was the country estate of Sir Humphrey de Trafford. The construction of the Manchester Ship Canal, opened in 1894, caused him to sell and move elsewhere. The estate was bought by a financier E T Hooley whose initial plans were to build houses and a racecourse. A need for new industrial sites close to the canal caused the plan to be changed. Trafford Park Estates Ltd was formed in August 1896 and the 1200-acre industrial estate grew quickly to become one of the largest in Europe, with its own railway system and docks, worked by the Ship Canal Company. Within five years there were 40 new factories, not least the large Westinghouse works, later Metropolitan Vickers and then AEI (but still shown as 'Westinghouse' in LUT timetables).

Public transport was needed, largely at rush hours, and in July 1897 Trafford Park Estates persuaded the British Gas Traction Co, which was running gas trams in Lytham St Anne's and elsewhere, to start a passenger service using a single town gas-powered tram. Kept at a depot at Barton, the tram ran on the existing railway tracks, from the Trafford Road (Old Trafford) entrance to the entrance at Barton with a loop in the middle along what became Trafford Park Road, Ashburton Road and Third Avenue to the Westinghouse works and thence to Barton, returning from Westinghouse via Westinghouse Road to Trafford Park Road. There were few completed factories and, hardly used, the service stopped until April 1898 when things were busier - three more cars being added to the fleet. The British Gas Traction Co went bankrupt in 1899 and Trafford Park Estates bought the four trams from the liquidator, settled the unpaid gas bill, and ran them itself.

The service was split in 1903 when Trafford Park Estates bought seven electric trams from the British Electric Car Co Ltd ("BEC") which had its works in the park. Trafford Park Estates had not wanted to run its own electric trams and had come to an agreement with Manchester Corporation for it to extend its tracks and serve the park. Unfortunately this involved laying a short length of new track along Trafford Road to join the corporation's existing system. The road in Stretford which at the time was in dispute with both Manchester and Salford and was also demanding rights over the private roads in Trafford Park. Stretford refused permission and Trafford Park Estates thus became a reluctant operator of electric trams and with an eye to the future decided to lay tram tracks for them and not use the railway lines.

BEC built a depot for the electric cars on a corner of its site. They worked a 2½-mile service from Trafford Rd to Westinghouse round the Third Avenue/Ashburton Road loop. Their motors were manufactured in the adjacent but much larger Westinghouse plant. Manchester soon overcame Stretford's opposition and in May 1904 Manchester and Salford agreed to lay the linking tracks and to take over the Trafford Park Estates electric system which they did in November 1905 extending the service into Manchester and Salford, Salford taking the cars. The services were converted to buses in 1934 and became bus services Manchester 65/66 (later 65) and Salford 84/85 (later 84).

The gas trams, still using the railway tracks, were unaffected by all of this but were curtailed to run the section of the service from the Post Office to Barton. In 1908 they were replaced by a train service, using a tank engine and two ex-Cheshire Lines Committee railway coaches. This was replaced in 1921 by three AEC buses and the service extended from Barton to Patricroft. The buses were operated and maintained by Trafford Park Estates' Trafford Park Garage Ltd. LUT bought the service and the three AECs in 1925. LUT was fortunate to buy the bus service when it did. Twelve months later a more bus-minded Manchester, Salford or North Western would have bought it and LUT would have lost what became a highly lucrative operation, needing dozens of buses - the total number of rush hour buses (Manchester, Salford, LUT and North Western) needed to serve the park's many factories in the 1950s was over 350.

BEC became insolvent in 1904 and closed down. Its sizeable (but never fully occupied) works in Westinghouse Rd then became Ford's UK car plant - extended it produced over 200 Model T Fords a day. Ford tried to expand but was unable to get a satisfactory agreement from Trafford Park Estates and gave up and built the new plant at Dagenham, Essex. This opened in 1931, leaving the Trafford Park plant empty until 1938. Under government instruction Ford then reopened it whilst it built a huge new Shadow Aircraft Factory (A-site) and a smaller one (Y-site) on what became Barton Dock Road to build aero engines (mainly Merlins for Spitfires) and aircraft parts, growing to employ 30,000. The two sites became the Massey Ferguson tractor plant after the war; the A site is now the Trafford Centre shopping complex.

TRAMCARS

Cars owned and operated by the British Gas Traction Company Ltd

Became insolvent 1899, the four cars were taken over and run by Trafford Park Estates Ltd

Subsequent owners:

S Warburton was a Warrington, scrap dealer. J M Hitchen was a Chorley-based car breaker; he converted some to lorries, the others were scrapped. The last owner is shown below; there were probably other owners after conversion and before the final owner shown.

91	TD 6648	Gaswell, Cawthorne, lorry, void 1941
92	TD 6647	Davis and Twiss, Frodsham, lorry, void 1939
93	TD 8068	Price, showman, Salford, void 1941
96	TD 8171	Lowe and Coxhead, Chorley, lorry, void 1948
97	TD 8172	Jackson, Tarleton, lorry, void 1949

98-102

Chassis: Leyland LG1 "Leviathan"
 Engine: Leyland 4-cylinder 8.0 litre petrol
 Body maker: Leyland
 Body type: H28/26R open staircase (26/26 when fitted with super cushion tyres, 1929/30)

New with solid tyres, all were fitted with "super cushion" tyres (effectively a thick soft rubber solid tyre) in 1929/30, the upper-deck seating then being reduced to 26. Pneumatic tyres fitted in 2/31.

98	TD 8173	50059	12/26	3/35	7/35	North
99	TD 8174	50060	12/26	5/36	7/36	Hitchen, Chorley
100	TD 8175	50061	12/26	6/35	7/35	North
101	TD 8233	50062	12/26	5/36	7/36	Hitchen, Chorley
102	TD 8232	50063	12/26	5/36	7/36	Hitchen, Chorley, scrap

Subsequent owners:

The last owner is shown below; 99 and 100 probably had other owners after conversion to lorries and before the final owner shown. Note that the January 1936 dates given in the Lancashire Motor Tax Void Register for TD 8232/33 are those for last licensing by LUT and not the final owners.

98	TD 8173	Blythe and Berwick, Bradford, lorry, void 1950
99	TD 8174	Ryder, showman, Birkenhead, void 1940
100	TD 8175	Hill, showman, Barnsley, void 1952
101	TD 8233	intermediate owner as lorry and later to North and scrapped

1927

⊙ after fleet number = nearby picture

103-110

Bought second-hand from West Riding Automobile Co Ltd, Wakefield, (fleet numbers 193-200)

Chassis: Bristol 2-ton forward-control
Engine: Bristol EW 3.6-litre 4-cylinder petrol
Body maker: Bristol Tramways
Body type: FB20F (full front)

Harry England was Managing Director of West Riding and also an active director of LUT. When West Riding had 12 surplus 2-ton Bristols, he arranged for LUT to acquire them. Four were to be allocated to the Bangor Blue fleet and eight to LUT. Because of Bangor Blue's winding up and the sale of its assets by the liquidator to Llandudno Coaching, HL 2032-35 passed direct from West Riding to Llandudno Coaching in 1928 - details will be found in the Bangor Blue section of this book.

They proved unsuited to LUT's services and had a short life. They were taken out of use and delicensed late in 1930 but held in reserve until after Easter 1931.

103	HL 2036	0224	new 1924	1/27	early/30	-/31	LUT van, -/31; sold -/47
104	HL 2037	0217	new 1924	1/27	early/30	-/31	SLT lorry, -/31; scrap -/44

110	HL 2043	0222	new 1924	3/27	c4/31	c5/31	dealer, converted to lorry

Subsequent owners:

The last owner is shown below; in the case of 107-110 there may have been other owners after conversion to lorries and before the final owner shown.

103	HL 2036	Edwardes of Langport Ltd, plumbing and heating contractors, 2/47, extant 1952. The firm was run by a relation of E H Edwardes - Bridport, Somerset was the Edwardes' family home.
106	HL 2039	Lancashire Electric Power Co, Radcliffe; void 1935
107	HL 2040	Bithell, Wigan, goods, void 11/39
108	HL 2041	Taberner, Hindley, goods, no date Stones and Hutchinson, dealer, Wigan scrap, void 11/37
109	HL 2042	Culshaw, Wigan, goods, no date Williams, dealer, Ripon scrap, void 2/37
110	HL 2043	Green, Hindley, goods, void 9/39

We have not found a large size picture of one of the ex West Riding Bristols with LUT. This is one of the same batch when with West Riding. LUT's HL 2037, 2038, 2040 and 2041 appear in the picture of the opening of LUT's extended Atherton motor bus garage on page 54.

111-120

Chassis: Bristol B "Superbus"
Engine: Bristol GW 5.9 4-cylinder petrol
Body maker: Davidson
Body type: B32F

In May 1927 the General Manager reported that he wished to place an order for 10 Leyland-bodied Leyland single-deckers but that although Leyland promised 14 weeks delivery he had no confidence Leyland could meet this timescale and, with an urgent requirement for powerful, larger buses for the new express services, instead the order be placed with Bristol for 10 Bristol B with Bristol bodies with a firm promise of September delivery. This was done but it then emerged that whilst Bristol could deliver the chassis on time the bodies would not be ready for some months; the order for bodies was cancelled and instead placed with Davidson (Trafford Park) Ltd whose price was £50 less per body.

Davidson was a well-established and substantial coachbuilder which had built mainly commercial bodies. It extended its range to bus bodies in 1927, building principally single-deck bus bodies and attracting sizeable orders from Manchester and LUT. The bodies proved good and Davidson would become LUT's chosen supplier of single-deck bodies until that firm ran into difficulties and become insolvent during 1930.

New with pneumatic tyres, as were all subsequent vehicles.

Coordinated Purchasing by LUT and West Riding in 1927-1928

16 Davidson-bodied Bristol B and 26 Leyland PLSC3

There appears to have been joint negotiation for the purchase of the chassis and bodies for these batches of vehicles - Harry England, Managing Director of West Riding was also an active director of LUT - saving money for both companies. The motivation was, however, more complicated.

As explained under the heading for 111-120 in May 1927 although LUT wanted to order Leylands, it seemed that the required delivery timescale could not be achieved. When the order was then placed with Bristol, there was a similar problem with delivery of the bodies.

It would seem that West Riding was faced with a similar problem. Both firms cancelled the body orders and placed them with Davidson (Trafford Park) Ltd. When bodying them, Davidson randomly allocated the batch of chassis to either company.

The next order, for Leyland PLSC Lions, was similarly shared. The picture shows one of these.

The chassis number of TE 2445 (LUT 148) has been quoted as 46598, West Riding 249 (HL 3816) is recorded as 46583. LUT 148 is 46583 in LUT's vehicle records and Lancashire Motor Tax records, and we have chosen to accept this; it seems likely that HL 3816 was actually 46588.

121-128

Acquired from Webster's (Wigan) Ltd, 14 Darlington St, Wigan, midnight 28/10/27 Jointly with Ribble Motor Services

Webster's bus operations, but not the charabanc business, were acquired on 28th October 1927 (the date has been given wrongly as 5th November). A brief note on the background and reasons for this acquisition is given on the next page.

The initially agreed price was £15,000 (Ribble's share was 43%) but £18,879 was finally paid, Ribble's share having risen to 48% (£9,139). LUT's negotiations with Ribble were somewhat acrimonious, Ribble apparently realising that Webster was more of a threat to LUT than itself. LUT and Ribble each acquired 8 of the 16 buses and Ribble took on Webster's order for 10 Leyland Lions that Webster had ordered.

An important side issue was that the take-over firmly established LUT's operating territory to the south and south-east of Wigan although no formal agreement was reached with Ribble and relations between the two companies remained somewhat acerbic, it being left to the Traffic Commissioners in 1930 to define a boundary.

The Webster bus fleet was numbered and those taken over by LUT kept these numbers, prefixed, W, for a short time in November and December before repainting into LUT livery. However, the individual Webster fleet numbers have not been traced and LUT's records do not give registration numbers for what were referred to as W4 and W12, W4 probably being one of 125-7 and W12 probably 123.

A break off from Massey, coachbuilders Barton & Danson were based in Orrell. The firm opened 1925 and closed in 1931.

TB 1069 had previously been owned by Bangor Blue and appears in the Bangor Blue section of this book.

125-128 were renumbered 35-38 in 12/29 to clear a space for the ex-Tognarelli Leyland Tiger and new TD1s.

Myths

The following have been quoted as being acquired from Webster. LUT's records confirm that they were not:
37 (EK 2178), 125 (B 8645)

Webster's bus fleet at takeover

Webster started a charabanc business in 1919 and in early 1926 began a stage service operation which prospered and grew very quickly with services based on Wigan running to Ormskirk (competing with Ribble), Golborne (competing with LUT) and Pony Dick (on the direct Billinge Road, hitherto untapped). Many local authorities, including Wigan, were obstructive in licensing these, resulting in Webster operating on the edge of (or outside) the law.

From 31st July 1927 the Golborne service was extended via Newton and Winwick into Warrington, thus competing more seriously with LUT. An agreement with the latter council had been made along the same lines as an existing one made between the council and LUT for traffic carried within the County Borough. An unsuccessful service to Crawford Village was also tried early in 1927 and Wigan Corporation began a competing bus service over the Pony Dick route. It was always the intention to extend beyond Ormskirk to Southport but this never came about - the Warrington agreement included Southport in anticipation of operation as a cross-Wigan link up.

These growing services were a threat to both Ribble and LUT and in 1927 they decided that it had to be eliminated, the matter made the more urgent by Webster's ordering 10 more Leyland Lions, to add to its existing fleet of 8 Lions and 8 older Leylands, in anticipation of the Southport service, which would hit Ribble's Wigan - Ormskirk route. An important side issue was the establishment of LUT's operating boundary.

The bus operations, but not the separate charabanc business, were acquired at midnight on 28 October 1927 (sometimes wrongly quoted as 5 November). LUT acquired 8 vehicles and Ribble 8 plus 10 Leyland-bodied PLSC Lions that Webster had ordered.

Using the funds from the sale, in April 1928 Webster acquired the bus and coach business of Richards (UNU Motors), Caernarvon and ran it for some two years before selling it to Crosville in January 1930. Having also retained the coaching part of the Wigan business, Webster returned to Wigan to expand it, later absorbing Smith's of Wigan. The combined business flourished into the 1980s.

This list of the 16-strong bus fleet is from LUT records and also that registered in August 1927 with the Warrington Hackney office. The Webster bus fleet was numbered but precise details of which vehicles carried which numbers have not been found although it is known that numbers 4 and 12 were acquired by LUT and that Webster numbers 9 and 10 were PLSC Lions. The numbers in the list below are the best "guess" from what is known. Similarly, there is some doubt over precisely which vehicles had Massey or Barton and Danson bodies.

16		EK 5946	Leyland PLSC1	45969	Leyland	B32F	7/27	7/27	10/27	to LUT 124
17		EK 5947	Leyland PLSC1	45970	Leyland	B32F	7/27	7/27	10/27	to Ribble 368

EK 487, B 8570, TB 1069, TB 1170, FR 2528 and E 6360 were originally charabancs, rebodied for the bus business in 1925 or 1926.

EK 487 was a reissued registration number.

TB 1069 had previously been a charabanc owned by Bangor Blue and appears in the Bangor Blue section of this book.

VA 3005/06 were B40D when new (to Hendy, Coatbridge) and were not full front

Webster had 10 Leyland-bodied Leyland PLSC Lions on order. The contract was taken over by Ribble; delivered in 1928 they became Ribble 456-65 CK 3914-23. Three more PLSC Lions (EK 6285-87) became part of the UNU fleet.

1928

Ø after fleet number = nearby picture

129-138

Chassis: Leyland "Titan" TD1
 Engine: Leyland 6-cylinder 6.8-litre petrol
 Body maker: Leyland
 Body type: lowbridge open staircase L27/24R
 all to 24/24 c1931

129-138 were the first to have the three small white lights (indicating L U T) immediately below the front destination box.

Renumbering

The three batches of TD1s were subject of multiple renumberings. An explanation, reasons and a summary is given after the batch 126-128 (1930)

Leyland Motors Ltd. Leyland, Lancs.			

From the Leyland Motors' manual for the PLSC1 and PLSC3 Lion that was issued to operators (including LUT) and to coachbuilders.

Leyland demonstrator TE 4812 was a PLSC equipped with the new engine and transmission that was to be used in the forthcoming LT1 Lion. LUT had it on loan and subsequently bought 73 of the new Lion model.

New bus garage and workshops, Atherton, 1928

THE LANCASHIRE UNITED
TRANSPORT & POWER CO. LTD.

Official Opening of NEW GARAGE AND WORKSHOPS

AT ATHERTON, LANCASHIRE

by

The Rt. Honble. The Earl of Derby,
K.G., P.C., G.C.B.

on Thursday, 11th October, 1928

ITINERARY

Carefully washed and polished, 45 buses were neatly lined up ready for the formal opening of the garage by the Earl of Derby on 11 October 1928.

There were some notable vehicles, including an ex Webster PLSC Lion EK 4577 and ex Webster Leyland C TB 1069 in the foreground and four of the ex West Riding "baby Bristols".

Another important vehicle is fifth from the left - Leyland demonstrator TE 4812 had the new engine and transmission that would be used in the LT1 Lion. It was on loan to LUT as part of Leyland's sales effort which resulted in LUT's fleet of 73 LT1 and LT2 Lions.

Starting at the left of the picture, they were

Left line, from the front:

EK 4577, TD 8068, TD 6648, TE 2444, TE 4812, TD 8069, TE 2436, TD 6647, TD 8172, EK 5946, Bristol B, TE 2437, B 8670, B 8775, B 8765, B 8666, B 8673, TB 1157, TB 1163, TB (1159-62), B 8-72,

Centre rear:

HL 2040, HL2038

Right line, from the back:

Leviathan, Leviathan, Leviathan, Leviathan, Leviathan, Leviathan, TC 400-, B 8771, TB 2529, TC 3779, TB 1427, TC 3778, TC 400-, KB 1985, KB 1987, B 8768, KB 1989, HL 2041, HL 2037, TE 2778, TB 1069

149-152

Chassis: Leyland "Titan" TD1
 Engine: Leyland 6-cylinder 6.8-litre petrol
 Body maker: Leyland
 Body type: L27/24R lowbridge open staircase
 all altered to 24/24 c 1931

Renumbering

The three batches of TD1s were subject of multiple renumberings. An explanation, reasons and a summary is given after the batch 126-128 (1930).

Myth: *That some TD1s were renumbered 89-94. None were.*

149 > 132 > 95 > 188 > 188A	TE 6161	70391	1/29	3/49	mid/49	football stand, Lowton St Mary's, Leigh

Subsequent owners

150, 151 (as 185A, 187A) TE 6162, 6254 Kenyon, breaker, Old Trafford, Manchester

153-188

Chassis: Leyland "Lion" LT1
Engine: Leyland 4-cylinder 5.1-litre overhead valve petrol with unit-mounted gearbox
Body maker: Davidson
Body type: B30F fixed roof (153-172) 8-bay
 B30F sliding roof (173-188) 8-bay

The choice of the four-cylinder engined Lion single-decker, rather than the larger, six-cylinder engined Tiger, reflected LUT's relatively flat operating area and also its general policy of smaller engines - something that would be carried through into the 30-foot Guy Arabs of the 1960s with their Gardner 6LW engines. By the end of 1931 with 73 LT1 and LT2 Lions and 27 TD1s LUT had transformed its fleet into a modern and up to date one.

In the "Sliding Roof" body the centre panel of each of the middle five bays of the roof could be opened by sliding the panel sideways to the offside along tracks giving five individual openings in the roof. To some extent this was a development by Davidson of the principle of the Strachan & Brown roll top.

There are pictures of two of 153-188 carrying hackney plates showing 32-seats; this appears to have been for licensing purposes; all evidence from photographs and also the company's 1930 and 1931 fleet lists show 30 seats.

The Davidson sliding roof. The picture on the right is the interior of the coachbuilder's 1929 Show model - it was fitted with a table in the centre of the gangway for use at the Show.

Renumbering

After 1935/6 many of the Lions were only licensed for the "summer season" and the plan was that all the LT1 and LT2 Lions would be replaced by the end of 1940. Most of those with sliding roof bodies were withdrawn and sold in 1937/38, together with many of the fixed roof ones that were in poor condition. The sliding-roof-bodied ones that survived into the war (180 from this batch) probably had the opening sections panelled over.

Early in 1938 some operators were asked by the government to retain any withdrawn vehicles and hold them in reserve in case of war and this appears to have included LUT and the surviving TD1s and serviceable Lions were affected. The Lions that were to be held had fleet numbers which clashed with new Leyland TS8s and in April 1938 they were renumbered into the first available gap - 153/4/7 became 158-160.

In March 1939 sales of buses from these fleets was restricted and those held in reserve were to be relicensed ready for emergency use. To avoid a further clash with more new vehicles, the above three plus the existing 161/2/5/7 were changed to 172-178. The ban on sales lasted until March 1945, any exceptions having to be given special permission.

In September 1939, again at the direction of the government, ten out of service / stored LT1 and LT2 Lions were converted to ambulances for use by the Ministry of Health for moving hospital patients in the event of an attack. Their seats were replaced by racks which could carry stretchers and the Ministry of Health then hired them from LUT, arranging for LUT to maintain and fuel them and provide crews when necessary. Numbered "Ambulance 1 - Ambulance 10", fortunately they saw little use (if any after 1942) but remained as ambulances held under the government's control until released early in 1945. We have found no evidence in LUT records that they were numbered "AMB1-10", all references are to "Ambulance 1-10".

In 1940 with the growth of Risley traffic, all the serviceable LT1 and LT2 Lions were put back into use. Once again, their fleet numbers clashed with the fleet numbers of new Leyland single-deckers 170-181 and a comprehensive renumbering for the surviving TD1s and LT1s and LT2s, was devised. The TD1s became 183-192, the LT1 Lions 193-214 and the surviving LT2s to 215-224. A list of the "new" 183-224 is after the section for vehicles 206-225. The sliding roof bodied buses that survived into the war (number 180 from this batch) were probably panelled over with a fixed roof. LUT was also directed to provide works transport for the government's contractors (Sir Alexander Gibb and Partners Ltd and Sir Lindsay Parkinson Ltd) to military sites being constructed - Burtonwood air base, Padgate RAF camp and others. The Lions ran until the construction work in the area ended in 1942/43 when the government allowed operators to take some single-deckers out of service. Most of the Lions were then put into store, some being reinstated later.

A fleet number in brackets indicates that, probably being in store at the time, the bus may never have carried that number. The symbol ≈ marks a disposal (or name) for which we are reasonably sure but cannot prove.

Myth

TE 6672 has been recorded (incorrectly) as a Halley due to an error in the Lancashire Motor Taxation ledgers. The correct registration of the Halley (chassis no 3199), new 3/29 to E Johnson, Barrow, withdrawn in 1936, cannot now be determined.

Subsequent owners

For those converted to lorries there may have been other owners after conversion and before the final owner shown.

The sales to The Rover Co, Solihull, were organised by the government for Rover to enable it to resume car production. They ran a service from Birmingham to Rover's new works, formerly the shadow factory, at Solihull, Rover's Birmingham works having been mainly destroyed by bombing. Sold by LUT in May, they went first to Leyland to be mechanically overhauled, their bodies were overhauled repaired by contractors and those which had been ambulances were re-equipped with seats fitted (many supplied by Birmingham Corporation) before entering service with Rover, mainly in September 1945.

153 as 208 TE 6665 scrapped 11/56.

154 as 214 TE 6666 **Hincks**, Leicester, 1/51, void 1952

Jointly with the transport departments of Bolton, Manchester, Oldham and Salford.

A summary of Tognarelli's background and details of the Tognarelli operation is on the next page. LUT's share was the following six vehicles, which were allocated fleet numbers in line with LUT's usual "grouping of types" - 2 was next to the small Daimler, 56-59 were available gaps in the existing AEC fleet, 125 was available after the renumbering of the smaller vehicles acquired from Webster into LUT's "small bus" block of fleet numbers.

Myth: WH 276 has been quoted as a Tognarelli bus which passed to LUT. Recorded in Bolton motor tax records as Thornycroft, chassis 22668 (incorrect for a Thornycroft of that date) there is no record of it in Thornycroft's sales ledgers, a list of the Tognarelli fleet in 1928, the details of sale to LUT, any LUT stock lists, nor the Bolton Hackney Licence records. It is probably a Tognarelli lorry, make unknown. It did not go to LUT.

Nicely repainted into LUT livery as fleet number 125, WH 1920's Burlingham body had a folding canvas roof - that on BN 9774 was similar. The body was replaced in 1933 by a standard Roe bus body and the bus was renumbered 240.

J R Tognarelli

Office: 127-129 Deansgate, Bolton (1919)
16-18 Bradshawgate, Bolton (1927)
170 Bradshawgate, Bolton (3/28-end)
Garage: 117 Manchester Road, Bolton
Burnden Park, Manchester Road (1928)
Livery: Buses: Grey, white and lavender
Coaches: lavender or maroon with white

The flamboyant John Robert Tognarelli came from Italy to England in 1904 and started an ice cream business, expanding from traditional ice cream carts to large Italian-style ice cream parlours in Bolton and Farnworth, to which he then added the Derby Restaurant in Bolton. He then started a haulage business, adding charabancs and a garage business in 1919. He was a prolific inventor with several patents covering a wide range of technical equipment for garages, heating and cooking.

In 1927 he acquired the charabanc fleet of Bromilow and Edwards Ltd, Bolton, whose principal business was truck and lorry bodies - but there was more to this deal than a simple transaction. Tognarelli saw an opportunity in long distance coach services and also inter-town express buses services and the deal involved provision of finance by either Bromilow and Edwards Ltd or its managing director, Maurice Edwards. A new fleet of modern ADCs and Leylands was bought and in April 1927 an express bus service from Bolton to Manchester started. Unable to get licences in Manchester, he used the then usual method of starting from private land (Poet's Corner, Long Millgate) in the city and issuing return tickets. LUT, Salford and Bolton responded at once, their service being operated by LUT until the corporations obtained licences. In September 1927 he applied unsuccessfully for licences for a Manchester to Oldham service and instead, in May 1928, started a Manchester - Chadderton service, avoiding Oldham's territory and again using the Long Millgate terminal. A service from Manchester to Walkden via Monton and Worsley followed. A Bolton - London coach service started in November 1928, again calling at Long Millgate, with a connection to Glasgow at Bolton, arranged with Lowland Motorways, Tognarelli coaches sometimes running through. It was all very successful and a new 100-vehicle garage was built at Burnden Park on Manchester Road.

Tognarelli's operations and modern fleet had become a major threat to the network of joint inter town express services established by the area's municipal operators, LUT and North Western, and they responded fiercely, increasing their own services and adjusting timings and fares to take customers from his service. Added to which the London route was over served, with excess capacity and much price cutting. The pressure told, and, hit by ill health and with the uncertainty of what might happen under the coming 1930 Road Traffic Act making his backers nervous about their investment, Tognarelli gave up. In December 1929, the business was bought jointly for £24,000 by LUT and the municipal transport undertakings of Bolton, Manchester, Oldham and Salford, LUT's share being £6,545 9s 1d. The London service ceased in the same month. Tognarelli retained the haulage, garage and tyre businesses at his original garage in Manchester Road, but concentrated upon what had always been his principal interest - the restaurant, café and ice cream bars. The Tognarelli family's café and ice cream businesses expanded to the north east, Cumberland and Scotland, and flourished into the 21st century.

The buses and coaches involved in the sale were:

Tognarelli had two more Leyland TS2 chassis on order - chassis 60534 was delivered 4/29 and sold to Lowland Motorways, becoming GE 6001; chassis 61047 passed to Manchester Corporation, becoming its fleet number 35. WH 1162 probably came from Ireland, the 'IB' chassis number was likely its Irish registration number.

Previous page: WH 1442.

Right:
WH 475 became LUT 59.

Below: WH 475, 476 (second and third from left) and three of WH 733-736 outside the new garage at Burnden Park. Small wonder that the corporations and LUT were keen to put a stop to his operations.

Right: WH 475 at Bolton Station. The man standing at the rear of the coach is very likely J R Tognarelli himself, wearing his ubiquitous black Homburg hat.

1930

⊙ after fleet number = nearby picture

126-128

Chassis: Leyland "Titan" TD1
Engine: Leyland 6 cylinder 6.8-litre petrol
Body maker: Leyland
Body type: L24/24R lowbridge, open staircase

LUT's fleet numbering system of separating types was continued; the ex-Webster single-deckers 126-128 had been renumbered to 36-38 in the "small bus" block. The three batches of TD1s were subject of multiple renumberings. An explanation, reasons and a summary is below.

126 > 99 > 192 > 192A	TF 339	71172	1/30	9/48	11/49	Adamson, dealer, Bolton
		3/39: renumbered 99

127 as 191A	TF 340	showman

Renumberings of TD1s 126-128, 129-138, 149-152

The plan was to withdraw all these TD1s over the years 1937-39. Early in 1938 some operators were asked by the government to retain any withdrawn vehicles and hold them in reserve in case of war and this appears to have included LUT. The surviving TD1s and serviceable Lions were affected. In March 1939 sales of buses from these fleets was restricted and those held in reserve were to be relicensed ready for emergency use. Next the demands of the building and operation of the Royal Ordnance factory at Risley caused them to be kept for the whole of the war. As a result the above-numbered TD1s became the subject of multiple renumberings. Whilst the numbering may seem complex, bear in mind the uncertainties of the time and also Chief Engineer Wilson's previous multiple renumberings of the 1920s Dennis single-deckers to keep them in neat blocks.

1938

To clear the fleet numbers for new Leyland TS8s, 149-151 were renumbered into vacant spaces 132, 135, 137 left by TD1s withdrawn from the 1928 batch. The 12 survivors were then in a neat batch 126-128 (TF 339-341), 130/1 (TE 2773/4), 132-138 (TE 6161, TE 2776/77, TE 6162, TE 2779, TE 6254, TE 2781). 11 were in service and scheduled to be sold in 1939; 131 was in stock but in process of conversion to a service vehicle.

1939

In February 1939 138 was involved in a bad rear end accident and was withdrawn. The other 10 were to be kept for a further year, hedging against the 1940 order for new double-deckers not being delivered due to the war. As the new Leyland Tiger single-deckers took fleet numbers 121-132, five of the TD1s - 126-128, 130 and 132 (TF 339-341, TE 2773 and TE 6161) had to be renumbered again, along with the 1932 Dennis Lance 125. They were placed at the end of the double-deck series (28-100), number 100 being used for the Lance with the TD1s numbered downwards from 99 to 95. Numbers 101-132 were already occupied by single-deck Tigers.

1940

LUT managed to get its delivery of new Leyland Tigers, which were numbered 133-140 and 170-181, and new Leyland Titans which became 89-98. These clashed not only with the 10 TD1s but also the surviving Leyland LT1 Lions and early in 1940 the TD1s became 183-192, the surviving LT1 Lions were renumbered into the block 193-214 and the surviving LT2s to 215-224. A list of the "new" 183-224 will be found after the section for vehicles 206-225. TD1s 133-7 became 183-187 and 95-99 became 188-192. The number 182 was not used in this renumbering and 225 was left vacant.

1948/49

After the war the TD1s remained in service when new Guy Arabs 182-192 were delivered in 1948/49. By this time the company had a new Chief Engineer and an A was added to the fleet numbers of the surviving TD1s - this may not have been carried on all the actual vehicles.

Myth

That some TD1s were renumbered 89-94. None were.

A summary of the renumbering by year is:

Original	4/38	3/39	4/40
126	126 >	99 >	192
127	127 >	98 >	191

Vehicles acquired but not operated

William Lees Ltd

Mellor Street, Radcliffe and

Central Garage, Victoria Square, Bolton

Acquired 24/3/30 jointly with Bury Corporation

William Lees began business around 1914, based in Mellor St, Radcliffe, and trading as The Radcliffe Motor Garage. In February 1920 he bought The Central Garage, Victoria Square, Bolton and equipped it with a new fleet of charabancs, taxis and touring cars, continuing also with the Radcliffe base. During the 1920s he then started three bus services:

Bury - Unsworth - Whitefield (Unsworth had not previously had a bus service)

Radcliffe - Black Lane - Three Arrows (which competed with Bury's tramcars).

The third route was from Radcliffe to Farnworth via Stoneclough which competed with LUT's Whitefield - Farnworth service.

Hit by the recession, in March 1930 he approached Bury and LUT seeking to sell his business, by this time the fleet reduced to five buses and a coach. Lees was on good terms with the Council and the result was that a 50/50 deal was agreed between LUT and Bury with LUT getting the hitherto denied permission from Bury for it to run into Radcliffe.

The price was agreed at £2,600 with LUT acting as principal in the interest of getting things done fast - this included LUT buying and disposing of the five unwanted Leylands. Bury took the Unsworth service, buying the bus used on it directly from Lees. The Three Arrows service was given up, being served by Bury's trams. LUT took the Farnworth service which was extended to Bury in May, operation then becoming joint with Bury. It ran more or less alternately with LUT's Farnworth - Whitefield journeys. The Bury service was split at Radcliffe in 1940 due to the start of war and remained so thereafter.

189-205

Chassis: Leyland "Lion" LT1
Engine: Leyland 4-cylinder 5.1-litre overhead valve petrol with unit-mounted gearbox
Body maker: 189-196: Davidson 7-bay; completed and invoiced by Eastwood & Kenning
197-205: Roe
Body type: B30F sliding roof (189-196)
B30F fixed roof (197-205)

The severe recession of 1929 and 1930 combined with Crossley Motors' entry into bus bodybuilding, which took Manchester's orders away from Davidson, hit the latter firm hard and Davidson became insolvent in February 1930. Two of the firm's directors, George Eastwood and George Kenning, bought the business from the receiver, continuing it in the same premises in Trafford Park, and took over existing orders, including that for 189-196. It got no further orders from LUT and in 1932 ceased making bus bodies, becoming part of the later Kenning Motor Group.

Roe had won the body order for SLTs' trolleybuses and also an order for 9 of the Lions and would become LUT's chosen supplier of single-deck bodies, with Leyland continuing to body its double-deckers.

Renumbering

After 1935/6 many of the Lions were only licensed for the summer season and the plan was that all the LT1 and LT2 Lions would be replaced by the end of 1940. Most of those with sliding roof bodies were withdrawn and sold in 1937/38, together with many of the fixed roof ones that were in poor condition. The sliding-roof-bodied ones that survived into the war (189-193 and 196 from this batch) probably had the opening sections panelled over.

In September 1939 at the direction of the government, ten out of service / stored LT1 and LT2 Lions were converted to ambulances for use by the Ministry of Health for moving hospital patients in the event of an attack. Their seats were replaced by racks which could carry stretchers and the Ministry of Health then hired them from LUT, arranging for LUT to maintain and fuel them and provide crews when necessary. Numbered "Ambulance 1 - Ambulance 10", fortunately they saw little use (if any after 1942) but remained as ambulances held under the government's control until released early in 1945. We have found no evidence in LUT records that they were numbered "AMB1-10", all references are to "Ambulance 1-10".

In April 1940 with the growth of Risley traffic, all the serviceable LT1 and LT2 Lions were put back into use. Once again, their fleet numbers clashed with the fleet numbers of new Leyland single-deckers 170-181 and a comprehensive renumbering for the surviving TD1s and LT1s and LT2s, was devised. The TD1s became 183-192, the LT1 Lions 193-214 and the surviving LT2s to 215-224. A list of the "new" 183-224 is after the section for vehicles 206-225.

LUT was also directed to provide works transport for the government's contractors (Sir Alexander Gibb and Partners Ltd and Sir Lindsay Parkinson Ltd) to military sites being constructed - Burtonwood air base, Padgate RAF camp and others. The Lions ran until the construction work in the area ended in 1942/43 when the government allowed operators to take some single-deckers out of service. Most of the Lions were then put into store, some being reinstated later.

Roe body numbers are in the column after the chassis numbers. The symbol ≈ marks a disposal (or name) for which we are reasonably sure but cannot prove.

Subsequent owners

For those converted to lorries there may have been other owners after conversion and before the final owner shown.

The buses sold to The Rover Co were a direct sale from LUT organised by the government for Rover to enable it to resume car production. They ran a service from Birmingham to Rover's new works, formerly the shadow factory, at Solihull, Rover's Birmingham works having been mainly destroyed by bombing. Sold by LUT in May, they went first to Leyland to be mechanically overhauled, their bodies were overhauled repaired by contractors and those which had been ambulances were reequipped with seats fitted (many supplied by Birmingham Corporation) before entering service with Rover, mainly in September 1945.

Ø after fleet number = nearby picture

28-37

Chassis: Leyland "Titan" TD1
Engine: Leyland 6-cylinder 6.8-litre petrol
 31: Gardner 5LW 7-litre diesel 11/33
 28-30, 32-37: Leyland 6-cyl 8.6-litre diesel 1-4/35
Body maker: Leyland timber frame
Body type: lowbridge L24/24R enclosed staircase

28-37 filled low gaps in the fleet numbers - some of the early Dennis buses were still in service in 1930 - starting a separate fleet number series for double-deckers which eventually ran to 98, although 1-27 would be used for single-deckers.

TD1 34 in 1950.

206-225

Chassis: Leyland "Lion" LT2
Engine: Leyland 4-cylinder 5.1-litre overhead-valve petrol with unit-mounted gearbox
 215 Gardner 4LW 5.6-litre diesel engine, 12/33
 216 Leyland 4-cylinder 5.7-litre diesel engine, 11/34
Body maker: 206-215 Roe
 216-225 Eastwood & Kenning
Body type: B30F fixed roof

Renumbering of the LT2s

In September 1939 at the direction of the government, ten out of service / stored LT1 and LT2 Lions were converted to ambulances for use by the Ministry of Health for moving hospital patients in the event of an attack. Their seats were replaced by racks which could carry stretchers and the Ministry of Health then hired them from LUT, arranging for LUT to maintain and fuel them and provide crews when necessary. Numbered "Ambulance 1 - Ambulance 10", fortunately they saw little use (if any after 1942) but remained as ambulances held under the government's control until released early in 1945. We have found no evidence in LUT records that they were numbered "AMB1-10".

In April 1940 with the growth of Risley traffic, all the serviceable LT1 and LT2 Lions were put back into use. Once again, their fleet numbers clashed with the fleet numbers of new Leyland single-deckers 170-181 and a comprehensive renumbering for the surviving TD1s and LT1s and LT2s, was devised. The TD1s became 183-192, the LT1 Lions 193-214 and the surviving LT2s to 215-224. A list of the "new" 183-224 is on the next page.

LUT was also directed to provide works transport for the government's contractors (Sir Alexander Gibb and Partners Ltd and Sir Lindsay Parkinson Ltd) to military sites being constructed - Burtonwood air base, Padgate RAF camp and others. The Lions ran until the construction work in the area ended in 1942/43 when the government allowed operators to take some single-deckers out of service. Most of the Lions were then put into store, some being reinstated later.

The symbol ≈ marks an owner for which we are reasonably sure but cannot prove.

The renumbered TD1, LT1, LT2 fleet, 4/40

In 1940, with the growth in Risley traffic, all the surviving TD1s and LT Lions were either already in service or put back in service. However, their current fleet numbers had been allocated to new Leyland Titans 89-98 and Tigers 133-140, 170-181 and a further, this time comprehensive, renumbering was arranged to place the surviving Lions and TD1s in the block 183-192 (TD1), 193-214 (LT1) and 215-224 (LT2), the four LT2s numbered below 215 being moved into the 215-224 block. 182 and 225 were left vacant. The Ambulances were already numbered Ambulance 1 - Ambulance 10.

After 4/40 182-225 were as follows. Some had then had four fleet numbers in as many years - a previous fleet number shown in brackets indicates that the bus was in store or reserve at the time and may never have actually run with that number.

1932

⊙ after fleet number = nearby picture

A single Dennis Lance was ordered in July 1931 - apparently the result of sales efforts by Dennis for its new model and also LUT's wish to try steel-framed double-deck bodies, an area in which Metropolitan Cammell was making an impact in the market. The other vehicle orders for 1932 were placed in August 1931, for seven Leyland double-deck and eight Leyland single-deck.

240

Chassis: Dennis "Lance II"
Engine: Dennis 6-cylinder 6.1-litre petrol
Body: Metropolitan Cammell, steel frame
Body type: L24/24R lowbridge

Exhibited in LUT livery by Metro Cammell at the Commercial Transport Exhibition, Olympia, in November 1931 and delivered during December. The styling of its body was a step in Metropolitan Cammell's evolution of its standard sloping front profile and was not, as has been suggested, based on a London General or Birmingham Corporation design.

Its fleet number, shown clearly above the indicator box on the pictures of it taken for the Show, seems to have been chosen as a "round number which looked impressive" and was not associated with Dennis Arrows 234-239 - it had been renumbered 125 by the time they were delivered.

240 > 125 > 100 **TF 7277** **126035** **1/32** **2/50** **6/50** Gerrard, contractor, Swinton, site cabin

1933

⊙ after fleet number = nearby picture

The modest 1933 vehicle intake was influenced by the growing acceptance of the diesel engine. Five firms were invited to quote for petrol-engined chassis and two for bodies. The single-deck chassis were to have six-cylinder engines for long distance work, because the joint operators were now using such vehicles. The prices for petrol-engined vehicles were:

Chassis

Bristol	£787 single-deck	£843 double-deck
Leyland	£864 single-deck	£885 double-deck
Dennis	£815 single-deck	£871 double-deck
AEC	£825 single-deck	£883 double-deck

Body

Roe	£507 single-deck	£685 double-deck	teak frame
Metro-Cammell	£450 single-deck	£685 double-deck	metal frame
Leyland	£541 single-deck	£633 double-deck	

Leyland and Metro-Cammell then reduced some prices

Leyland	£830 single-deck chassis, £500 single-deck body
Metro-Cammell	£660 double-deck body

The Managing Director commented that Bristol's was a new model of which only two had been delivered; the Dennis Lance bought the previous year had covered 33,000 miles and been highly satisfactory. The 1932 Leyland Lions had not been at all satisfactory, especially in oil consumption - he had made a series of complaints to Leyland's managing director. It was his view that Leyland had fallen behind. Roe's bodies had also been highly satisfactory. He therefore recommended Dennis single-deckers with Roe bodies plus a new body for the ex-Tognarelli Leyland Tiger. The Metro Cammell body on the Lance had proved good. The board had also asked for quotes for diesel-engined double-deckers and these were:

Leyland	£1085
Guy (Gardner engine)	£1265
AEC	£1063
Tilling-Stevens	£1278

He commented that although a Gardner engine cost £180 more than other makes, it appeared to be more efficient and subject to less wear. He recommended that two Leyland with Leyland bodies and two Guy-Gardner with Metro Cammell bodies be purchased, noting that the extra capital cost would be saved in fuel bills over a year. It was probably no coincidence that at the same time two Gardner-engined Guys were bought by West Riding whose general manager, Harry England, was an active and influential director of LUT.

1935

⊙ after fleet number = nearby picture

In October 1934, quotes were obtained for ten new diesel engined double-deckers with metal-framed bodies for supply in 1935 - the bus fleet remained constant at around 176 from 1934 to 1938.

The manufacturers asked to quote were somewhat different from the previous year. Dennis was not invited because it did not have a 6-cylinder diesel double-decker. Nor was Guy, for LUT was in dispute with that firm - there were serious problems with the 16 4-wheel SLT trolleybuses - vibrations and chassis failures. The Managing Director reported that Guy's response was "half-hearted", that the firm carried practically no spares and had "fallen out" with Metropolitan Vickers, which supplied the electrical equipment. He had withheld part of the payment and Atherton had had to do some of the rectification work itself. Also, it seemed Guy Motors' financial position was not healthy. Crossley, on the other hand, had its new Manchester-specified Mancunian to offer. The prices were:

Leyland / Leyland body	£1,425	£850 chassis	£575 body
Crossley / Metro Cammell/Crossley body	£1,680	£950 chassis	£830 body
		(chassis price then reduced to £850)	
Daimler (Gardner engine) / Metro Cammell body	£1,795	£1065 chassis	£730 body

He commented that Leyland's price last year had been £1,711. Disputes and transmissions apart, buying those Dennises had clearly provoked a reaction from Leyland's Sales Department. In respect of the Daimler, he reported that whilst the Gardner engine was excellent, Leyland's had improved and he now did not think it worth the extra cost of the Gardner - also the Daimler chassis used a fluid flywheel / pre-selector gearbox transmission which, whilst a very good job, offered no advantage for LUT's work and caused higher fuel consumption, thus offsetting one of the Gardner's advantages - and that to have ten "odd" vehicles in the fleet would not be a good idea. The view of fluid flywheel transmission would prevail at Atherton for some 40 years

Additionally, some petrol single and double-deckers were to be converted to diesel engines, the conversion of a TD1 and an LT2 to Gardner engines having proved successful.

49-58

Chassis: Leyland "Titan" TD4
Engine: Leyland 8.6-litre 6-cylinder diesel
Body maker: Leyland, steel frame
Body type: L22/26R lowbridge

The bodies were to Leyland's first steel-framed standard design and, as with others of this type, had to be returned to Leyland after a year or so for strengthening modification to the bulkheads.

1936

⊙ after fleet number = nearby picture

The 1936 intake of 21 vehicles was a mixture of chassis and also body types, with six of Dennis's Lancet 6-cylinder petrol-engined single-decker - LUT's last new petrol-engined buses, plus a single example of the new Lancet 2 which had Dennis's new 4-cylinder diesel engine. The ten Metropolitan Cammell bodies were steel-framed and, new for Roe, the body on the diesel-engined Lancet was of lightweight steel-framed construction. The four Leyland double-deckers had early examples of Leyland's redesigned standard body.

The withdrawal of numbers 1 and 2 (Daimler TB 1236 and the ex-Tognarelli Lioness) made the block of fleet numbers 1-27 vacant and, somewhat in contradiction to LUT's usual fleet numbering methods, they were reused for single-deckers, double-deckers continuing in their existing series.

101-112

Chassis: Leyland "Tiger" TS7
 Engine: Leyland 8.6-litre 6-cylinder diesel
 Body maker: Roe, teak frame
 Body type: DP30F coach interior, LUT "sloping floor" body

101-112 (and the later 113-140) had a special -to-LUT body with a coach interior, a sloping floor to avoid wheelarch intrusion and a higher waistline. LUT classed and recorded them as coaches. This year's examples were finished in a smart new livery in the streamline fashion which was particularly prevalent in the Manchester area at the time.

1937/1938

O after fleet number = nearby picture

A second order was placed with Leyland in 1937 for 15 double-deckers, eight 30-seat "coaches" and 17 32-seat buses, the latter including eight with Leyland steel-framed bodies. The single-deck buses started a new series of fleet numbers at 141, leaving 113-140 for further "coaches". The double-deckers were LUT's first true highbridge buses.

A change in the specification was the introduction of service number indicators. The bus services were given new numbers - since 1923 timetables had shown what were termed "service numbers" but vehicles had only displayed a destination and the "service numbers" used in timetables had been more in the nature of the "table numbers" used in railway timetables of the period and from 1931 had been replaced by the Road Service Licence number. The indicator system was altered from roller blinds to back-lit metal stencil plates for destination and number indicators - a stock of those needed for the day's work were kept in a rack beneath the stairs. After 1941 roller blinds were slowly fitted to the destination boxes of almost all the fleet but stencils continued to be used for service numbers on vehicles not retro-fitted with the post-war "inverted Ribble"-style indicator boxes.

67-81

Chassis:	Leyland "Titan" TD5
Engine:	Leyland 8.6-litre 6-cylinder diesel
Body maker:	Leyland, standard, steel frame
Body type:	H30/26R highbridge

Before delivery 72 was displayed on the Leyland stand at the November 1937 Commercial Motor Show, its upper deck fitted out as a reception area for Leyland clients. As part of the normal overhaul work, around 1951 most of 67-81 were fitted with smaller windcreens, using the opening part of the previous windscreen mounted in new panelling, as shown in the illustration. 71 had its front upper-deck windows reglazed in Northern Counties style.

LUT's vehicle choice

There seems little doubt that, like most other operators outside of London Transport, from 1933 General Manager E H Edwardes and Rolling Stock Superintendent (effectively chief engineer) W J M Wilson were impressed by the reliability, durability and fuel economy of the Gardner engine and would have liked more. It is interesting to consider why this did not happen at once and why things changed after the war.

In 1933, the problems with the Guy 4-wheel trolleybuses, Guy's poor spares back-up and dubious financial health had caused a rift with LUT, which was not going to buy any Guys until things improved. Daimler offered a Gardner engine but only with fluid flywheel and preselector, a transmission which LUT thought unsuitable for its work and which offset the fuel saving of the Gardner; Daimler too was "off the list". Bristol used Gardner engines but its standard offering was the 5LW which LUT considered insufficiently powerful for a double-decker. AEC and Crossley only offered a Gardner as a special, and then reluctantly, and, in the case of AEC, with a fluid flywheel and preselector. Also, the price of both was too high.

Having built its business using the 1919/20 Dennises from which it had had excellent service, LUT had continued to buy from Dennis but that firm did not always have suitable models. For example, when LUT switched to diesel engines, Dennis had no 6-cylinder diesel; its only offering was a 4-cylinder unit that was totally underpowered in a double-decker.

Meanwhile E H Edwardes was reporting that the Leylands were "perfectly satisfactory" - and, keen to keep LUT's business, Leyland was offering very aggressive prices. Almost by default, Leyland was the logical choice.

However, at the start of the 1940s there came a twist to LUT's vehicle purchasing considerations. The Edwardes family and Joseph Gardner, Chairman and Managing Director of L Gardner & Sons Ltd, and his family were near neighbours in Leigh Road, Worsley and attended the same church. At St Mark's Church, Worsley, on 1 October 1942 Eleanora, the younger daughter of Mr E H Edwardes and the late Mrs Edwardes, of Booths Hall, Boothstown, married Hugh, the elder son of Mr & Mrs Joseph Gardner, of The Coppice, Leigh Road, Worsley. Hugh subsequently took over from his father as Chairman and Managing Director of Gardner - in business he proved to be a forceful character.

The government's arrangements for bus production during the war meant that, in any event, LUT would get Gardner engines and had also resulted in Guy having a good rugged chassis and proper spares support. But it was no surprise then that when the war and government controls on vehicle purchases ended, it was not long before LUT chose Gardner-engined Guys. Gardner's engines were in great demand - but LUT would always get what it needed.

There was previous marriage of relevance too. In 1939 August Gernaey married the Edwardes' elder daughter, Barbara. He worked for body makers English Electric, Preston, the new family moving a year or so later to the Salisbury area where he worked at the plant of the Wellworthy Piston Company Ltd. He was appointed LUT's Chief Engineer in April 1949, the family moving from Salisbury to an LUT-provided house at Hindley Green.

E H Edwardes grandfather was the 2nd Baron Kensington. To complete the family picture, the Edwardes had four sons and two daughters, their eldest son, William being depot manager at Hindley and then Swinton, leaving the company in 1946. The wider family home was in the Bridport / Langport area of Somerset where the Edwardes' second son was vicar of Bridport for many years. Contemporary members of another branch of the Edwardes family had a substantial electrical, plumbing and heating business in Bridport. A long way from Atherton it might be, but the firm acquired some of LUT's surplus vans and lorries, including one of the former West Riding Bristols acquired by LUT and when withdrawn used as an LUT service van. Here it is with Edwardes of Bridport, still intact but with a Commer radiator (and possibly engine). The firm's successors, G R Edwardes Ltd, still traded in Bridport in 2017.

The Impact of War

In addition to the mining and other industries, within LUT's operating area there were major sites on which the war effort would depend - locomotive works at Vulcan Village and Horwich, the shadow aircraft factory at Lostock, Bolton, managed by de Havilland, the Royal Ordnance Factory ("ROF") at Chorley, the huge Metropolitan Vickers works and the newly-built aero engine works both in Trafford Park. - managed and run by Ford, the latter turned out Rolls Royce Merlin engines "like shelling peas". From 1941/42 there would also be the huge air base at Burtonwood, used the by RAF and United States Air Force, and the Royal Navy's aircraft training sites.

The greatest impact on LUT's fleet and operations was the new Royal Ordnance Factory at Risley. Given a very high priority in mid-1940, there were 5,200 workmen on site in March and 24,600 in July; it was completed in September 1941.

Drafted in from a wide area, munitions workers grew at 1,000/week to a peak of 21,000, working round the clock on three shifts, two on Sundays. Two railway stations and a bus terminal were provided, for reasons of safety they were at the edge of the site.

LUT and Leigh Corporation provided the bus services to the site. In November 1939 LUT needed six buses for these, in December it was 10, 33 in March 1940 and 56 in April, Leigh then needing 33 - and if possible they had to be double-deckers. LUT's fleet grew within a few months from 176 to 254.

To avoid staff having to walk half a mile or more to the huts in which they worked, an internal bus service was provided. Run for the Ministry of Supply by a private operator using old vehicles - described by one worker as "rickety wooden things", they were probably something like an elderly PLSC Lion with a body which had a timber tongue and groove roof. MacShane, Liverpool, ran the services at Kirkby and the ROF itself ran them at Chorley, using some Crossleys hired from Manchester. We have been unable to trace further details for Risley but there is no evidence of any LUT involvement.

LUT's traffic receipts show the site's importance in traffic receipts terms. Annual extra fares income in 1941 was Risley £46,000, RoF Chorley £8,000, Trafford Park £9,000 - offsetting the loss from the suspension of the Tyne-Tees-Mersey (£9,000) and Blackpool (£4,000) services and private hire (£5,000).

Risley

Risley was one of the so-called "1939" factories, which were authorised in 1939 - No5 Swynnerton, No6 Risley and No7 Kirkby. Sites were identified by 1 September 1939 and construction of Risley began in November 1939, with some production beginning to come on-line by September 1940.

Risley was a "filling factory", packing explosives into shell cases, both of which were made elsewhere and brought in, and it was a highly dangerous operation. Filling factories required large area of flat land for the many dispersed buildings - 300+ acres. They had to be near to a large catchment area for the labour but distanced from anywhere that would suffer from the almost inevitable accidental explosions. For reasons of food production, the land had to be poor in agricultural terms and if that meant a clay/peat/wet area prone to fogs and mist, so much the better for defence from air attack. Rail access had to be available to bring in some of the labour and all the materials. Risley Moss was ideal.

Classified secret and a prohibited place to ordinary civilians. Risley was huge, with many small buildings - it cost £21.9M. In June 1941 18,000 were employed at the site, peaking at about 21,000. At the end of war it dropped rapidly from 11,000 to 500. For the Army alone Risley produced 2 million mortar bombs, 5 million 25-pounder quick-firing cartridges; 1 million anti-tank mines plus product for the RAF and Navy.

After the war Risley became the headquarters of the country's nuclear weapons research programme and then the civil nuclear power station programme. Later it was the headquarters of the United Kingdom Atomic Energy Authority and some of the factory site was used for associated work, staff numbers rising to 20,000 and then 30,000, it was still a high security site. By 1963 all but the main office and lab buildings were unused. In 1968 the area was redeveloped becoming what is now Birchwood.

1939

⊙ after fleet number = nearby picture

Rearmament slowed all chassis manufacturers' production but there was little likelihood of LUT suffering any delays or cuts - in addition to the mining and other industries within LUT's operating area there were major sites on which the war effort would depend - and the fleet increased by some 20 vehicles. The reintroduction of lowbridge bodies on double-deckers was a further consequence of this with a need for the extra capacity of double-deckers on routes which passed beneath low bridges on which single-deckers had hitherto been adequate. LUT's normal layout for the upper deck of a lowbridge double-decker was 22 seats (six rows of 3 and one of 4) compared with the more usual 4-seat rows but numbers 82/85-88 were soon altered to rows of 4, other than one of 3 at the back - every extra seat mattered in wartime.

82-88

Chassis: Leyland "Titan" TD5

1940

○ after fleet number = nearby picture

LUT normally placed its vehicle orders in July, to ensure delivery in good time for the following Easter. With the outbreak of war, this year's orders took rather longer and were only placed in September 1939 - for ten TD7s and 20 TS11s for delivery in 1940. The bodies would have, respectively, been Leyland and Roe but Leyland's body shop was increasingly given over to military work and, concerned about being able to get the chassis but then not getting bodies, the body orders which would have gone to Leyland were placed with firms which could deliver on time - English Electric for five of the single-decks, very likely due to influence from E H Edwardes new son-in-law who worked for the firm at the time, and Weymann for the double-deckers. Both were new suppliers to LUT, although the Weymann body used the Metro Cammell steel frame built under licence. In 1923 LUT had bought English Electric's first bus bodies and it was maybe fitting that the five 1940 Tigers would be some of the firm's last before it gave up bus work in favour of aircraft.

In spite of the priority that LUT would have received because of the various military sites and key works that it served, the TD7 chassis were delivered a month late but the single-decker chassis were almost five months behind schedule and were therefore delivered with the by then mandatory grey roof.

Construction of the massive Risley Royal Ordnance Factory was well underway and no vehicles were replaced by the new buses so that when the TS11s were delivered the fleet had increased by 57 from early 1939 to 253, in addition to which were the first five of what would be many more brought in on hire.

In 1940, with the extent of the war unknown an order was placed with Leyland for 60 more chassis - to cover the planned intakes for 1941 and 1942 although, as Managing Director Edwardes commented, it was more in hope than in expectation.

Although there was a need to provide extra services to Trafford Park, the Ordnance Factory near Chorley and the many other factories in the area engaged in war work, it was services to Risley that placed the largest demand on LUT. In November 1939 LUT only needed 6 buses for the services to Risley, in December it was 10 but as the site came into full operation the demand grew at an astonishing rate - in March 1940 33 buses were needed for Risley and 56 in April.

LUT put back into service its surviving serviceable Leyland TD1s and LT1 and LT2 Lions, all of which had been scheduled for disposal, but they were not enough and, with Ministry assistance, buses were hired from anywhere that LUT could get them. The hired-in fleet would grow to 54.

Fortunately some operators had surpluses of spare buses - Manchester and Bolton, for example, had received large deliveries of new buses for tram replacements - the trams were kept and tram routes reinstated. On the south coast, fear of invasion made Eastbourne a prohibited place and much of its fleet, sized for summer holidays, was available. Many of the hired buses were old and keeping some going was often troublesome and yet to meet its commitments LUT needed 254 of its fleet of 258 to be available for service. The government helped, allocating LUT considerable numbers of "unfrozen" and "utility" new buses.

1940 - HIRED

Most of the hired vehicles retained the fleet number of their owner with a suitable prefix letter - the latter not always carried on the vehicle. Much that is inaccurate has been published on LUT's wartime hires - for example vehicles hired by Widnes and Leigh being attributed to LUT and dates of hire being wrong by several years. The data herein is from LUT records.

From Bolton Corporation

B.64, B.66-68, B.71

Chassis: Leyland "Titan" TD2
 Engine: Leyland 7.6-litre 6-cylinder petrol
 Body make: Bromilow & Edwards, timber frame
 Body type: L24/24R lowbridge
 New: 1933

B.64	WH 4213	1644	2/40	7/44	returned to Bolton
B.66	WH 4215	1646	2/40	7/44	returned to Bolton
B.67	WH 4216	1647	2/40	11/44	returned to Bolton
B.68	WH 4217	1648	2/40	4/47	returned to Bolton
B.71	WH 4220	1651	2/40	4/47	returned to Bolton

It is noteworthy that 68 and 71 spent half their Bolton lives on hire to LUT.

Myth

63 WH 4212, 65 WH 4214, 69 WH 4218 were not hired by LUT; they were hired from Bolton by Leigh Corporation

No pictures of those hired by LUT are available. The pictures are of Bolton WH 4214 of the same class and Ribble CK 4243 which was of the same type as those hired by LUT

1941 - NEW

⊙ after fleet number = nearby picture

247-249

In 1941 the Ministry of War Transport offered LUT three Leyland TD7s which had been built for South Africa but which could not be shipped - it appears that they had originally been ordered by Lincoln Corporation which then cancelled the order, the chassis and body parts being reallocated to the South African clients. There are no precise records but evidence is that the intended owner for the three chassis was Southern Transports (Pty) Ltd of Wynberg. When war intervened one (248) had been bodied and was photographed at Leyland finished in Southern's green and white livery. The other two chassis were fitted with existing bodies, built off-chassis for other customers. That on 247 was for a customer in Johannesburg and 249's body was for the Bloemfontein municipality. Each of the trio therefore had had a different indicator layout (which LUT did not alter). 248 was delivered in green and white livery and ran thus for LUT until repainted. Photographic evidence is that 247 and 249 were delivered in LUT livery.

Chassis: Leyland "Titan" TD7
Engine: Leyland 8.6-litre 6-cylinder diesel
Body make: Leyland steel frame
Body type: 249 and one other: H32/26R highbridge, altered to 30/26 at post-war overhaul
 247 or 248: H30/26R highbridge

250-253

Government licences for 10 new Leylands were granted in September followed by two more in November - all were Leylands and drawn from the so-called "unfrozen" stocks of vehicles built for various operators but held under government direction at Leyland. Six of them had been built for W. Alexander & Sons Ltd, Falkirk. The first four arrived in November/December. Registration numbers were obtained for the fifth and sixth but their delivery was delayed. All had Alexander's standard front indicator box, of which LUT only used the destination screen.

Chassis: Leyland "Titan" TD7
Engine: Leyland 8.6-litre 6-cylinder diesel

1941 - HIRED

There was more government help in finding further double-deckers that LUT could hire to assist with the Risley work and by the end of the year there were 31 further double-deckers, making a total of 41 plus the six single-deckers. The invasion risk made Eastbourne a prohibited place and it thus had a surplus of the buses that it used for summer traffic. Manchester no longer needed any lowbridge buses and provided 17 diesel Crossley Condors and two TD1s; many had been part of the political but largely unnecessary loans of buses to London Transport from 10/40 to 8/41. **Six** Leylands came from Preston - they too had been to London.

E.83	JK 3722	4771	11/41	6/45

From Manchester Corporation

Manchester's fleet of lowbridge vehicles was surplus to requirements and LUT hired 17 diesel-engined Crossley Condors and a petrol-engined Leyland TD1. With their difficult to use right-hand gate gear change, centre accelerator pedal and steering wheel set at a sharply raked angle more like a motor car than a bus, the Crossleys were unfamiliar and troublesome. Perhaps relevant is that most had been on loan to London from October 1940 to August 1941 and such was the urgency that Manchester had almost no time to do anything to them before they had to go to LUT. When London Transport offered 13 ST-type AEC Regents, the Condors were returned to Manchester ahead of their planned date.

M.189/91-3/6-8 M.205/49/51/6/8/62-4/7/8

Chassis: Crossley "Condor"
Engine: Crossley VR6 9.1-litre 6 cylinder diesel
Body make: Metro-Cammell/Crossley steel frame new 1935/6
Body type: L26/26R lowbridge
Chassis new: 1930/1 (904xx), 1931/2 (908xx), 1932/3 (910xx)

The bodies were new in 1935 and 1936 and had Metro Cammell steel-frames finished by Crossley. Those on Crossley chassis 908xx had first been fitted to earlier Condor chassis and then in 1937/38 had been moved to later chassis, which were then renumbered by Manchester into its "lowbridge" series, their original numbers, are shown in brackets. The reasons for these changes were complex and not relevant to the LUT loans. Some arrived at LUT during the month previous to their use; likewise some were returned to Manchester several weeks after their last use.

M.268 (ex 200)	VR 6687	90411	9/41	5/42

Manchester 257 (ex 273) went to LUT for a day in 9/41, probably as driver transport for the delivery

M.215, M.237

Chassis: Leyland "Titan" TD1
Engine: M.215: Leyland 6 cylinder 8.6-litre diesel
M.237: Leyland 6 cylinder 6.8-litre petrol
Body make: Metro-Cammell/Crossley steel frame new 1935/6
Body type: L26/26R lowbridge
New: 1930

Petrol-engined M.237 was returned with an engine problem and replaced by M.215. There is unconfirmed speculation that it had been accidentally filled with diesel at LUT. Its engine was replaced at MCT but failed again; it did not return to LUT. Manchester then converted it to diesel before sending it on hire to Crosville.

M.215	VR 6004	71062	12/41	12/42
M.237	VR 5472	71047	9/41	10/41

There are no pictures of Manchester 215 or 237; this one of similar 211 shows it after return from loan to Crosville.

From Preston Corporation

P.42/48-50, P.68, P.70

All had previously been on hire to London Transport

Chassis: Leyland "Titan" TD2
Engine: Leyland 6 cylinder 8.6-litre diesel
Body make: English Electric timber frame
Body type: P.49: new English Electric steel frame body 1939/40

On 31st December 1941 the hired fleet totalled 47 of which 6 were single-deckers:-

10 Bolton
10 Eastbourne
18 Manchester
3 Preston
6 Ribble

CK 4646 had been rebodied in 1939/40
These pictures show similar vehicles - CK 4640, which was not rebodied, and CK 4641 after rebodding.

Seating arrangement of and modifications to lowbridge "utility" bodies

The government specification and drawings for wartime lowbridge bodies required 55 seats - 27 upstairs (the usual arrangement) but with 28 rather than the more usual 26 downstairs, the latter was arranged with six rows of double transverse seats and a facing pair of longitudinal seats for two over the rear wheel arches. This contravened the normal Construction and Use rules for seat spacing and there was an exemption for the lower deck seat spacing on lowbridge utility bodies. The normal seat spacing only allowed five transverse rows, with seats for three over each wheel arch.

The problem did not apply to highbridge utilities, which seated 56 - the aim for the lowbridge buses being nearly to match the seating of the highbridge ones.

In later years the restrictions on overall vehicle length were altered from 26ft to 27ft allowing 28 seats in the lower deck. The wartime Guy Arab II chassis had special permission permanently to exceed the 26ft limit by 9in, to allow the fitting of a Gardner 6LW engine without the need to shorten the lower deck body space.

The relaxation of seat spacing was **withdrawn when** the Construction and Use Regulations were reimposed **on 1 January 1947 and thereafter** when a lowbridge utility vehicle came up for renewal of its Certificate of Fitness, its lower deck seating had to be reduced to 26. Such was the pressure on operators' fleets, that across the country into 1952 many vehicles were allowed to continue to run on their wartime Defence Permits, which allowed the 28 seats. LUT's last vehicles came off Defence Permits in 1951 and by the end of 1951 all LUT's lowbridge utilities had been altered to 26-seat lower decks.

Wooden slatted seats

Early in 1943 the "utility" specification was changed to require seats with wooden slats instead of upholstered cushions. 46 LUT "utilities" were so fitted and so far as we have been able to determine these were 274-319, some being fitted at the first opportunity with spare upholstered seats that LUT had in stock. SLT trolleybuses 60-65 were new with upholstered seats, again from either LUT or the bodybuilder's stock. When the war ended, those which were not so treated were fitted with upholstered seats as soon as possible. All were done by the end of 1947, the change usually being done before the 26-seat conversion.

1942 - NEW

⊙ after fleet number = nearby picture

Fifteen further new vehicles were allocated to LUT in 1942 by the Ministry of War Transport. There were eight Leyland TD7s of which numbers 254/58/59 had bodies which had been in build for W. Alexander & Sons Ltd, Falkirk; they had Alexander's standard front indicator boxes, which LUT did not alter but only used the destination screen. The other five had chassis assembled by Leyland from existing stocks of parts again at the direction of the Ministry of Supply ("MoS") and then allocated by the Ministry of War Transport.

255 was LUT's first example of a Northern Counties body. It was only partly to the MoS specification having, for example, outswept skirt panels.

At the end of November 1942 the hired fleet was 54:

12	Bolton
12	Eastbourne
8	Manchester
7	London
6	Oldham
6	Ribble (single-deck)
3	Preston

1943 - NEW

⊙ after fleet number = nearby picture

LUT's 1943 allocation included three Daimlers. The Managing Director was not happy about this, having long declined to use fluid flywheel / preselector transmission because of the extra initial cost and the on going extra fuel consumption. The Daimler chassis was £300 more than the Guy but all he could achieve was that they had Gardner engines, commenting that if he refused to take the Daimlers, the Ministry would very likely allocate no more new vehicles to LUT - and he thought they had been very fortunate in what LUT had been allocated thus far.

277 and 278 delivered with number plates FTD 181,182 but were registered as FTD 182,181. This was corrected when the log books were examined after the war as part of the Certificate of Fitness examination c1950/51, the registration plates then being fitted to the correct chassis. This picture shows 277 as FTD 181.

286

Chassis: Daimler CWG5
Engine: Gardner 5LW 5-cylinder 7.0-litre diesel
 fluid flywheel/preselector gearbox transmission
Body make: Brush timber frame
 MoS "utility" specification; wooden-slat seats
 upholstered seats fitted by 1947
Body type: L27/28R lowbridge, altered to 27/26R by 7/51

LUT was allocated a further Northern Counties-bodied Guy Arab, chassis number FD26016, body number 3458. This was in build and was to become 284, FTD 188, with FTD 189/90 becoming 285/6.

At the same time St Helens Corporation was allocated Brush-bodied Daimler CWG5 11373. St Helens had five Guys but no Daimlers and, probably due to pressure from the Regional Traffic Controller, LUT was persuaded to give up the Northern Counties-bodied Guy (having already paid for it and its body) to St Helens and take the Brush-bodied Daimler instead. To rub salt into the wound - for E H Edwardes' views on the fuel economy of fluid flywheel / preselector transmission and also the £400 extra cost of a Daimler chassis were well recorded - LUT had to pay St Helens the £310 difference (£400 less £90 - the Brush body was cheaper than the Northern Counties). Not only that, for instead of a tough Northern Counties steel-framed body, LUT got a far less durable timber-framed Brush. The resultant Daimler took the registration booked for the Guy, which became St Helens 98 (DJ 9076).

Body type: L27/28R lowbridge, reduced to 27/26 by 7/51

The engine change notes in the previous batch (287-296) apply to 297.

297 0 FTD 590 FD26365 GO1313 12/43 2/61 9/61 TPE, scrap

Lined up outside Atherton garage: 290, 272, 264, 284, 281, 280, 283, 265, 263, 294, 274, 296, 293 and 269.

Producer Gas

As with most operators, the government imposed a requirement for a number of vehicles to be converted to run on producer gas, towing trailers which had solid fuel fired burners, the resulting fumes passing over water and generating the producer gas fuel. Although a diesel engine could be converted, most vehicles so fitted were petrol because the conversion was simpler. The results were poor performance and operators by and large were reluctant to do the conversions, most doing them very slowly.

In October 1942 the Ministry of War Transport instructed bus operators to convert 10% of their fleets by July 1943 - specifying 30 in the case of LUT. It received three gas trailers from the Bristol Tramways & Carriage Co (the bus maker) in January and a further 13 in June; the other manufacturer (Wylie Harris & Co) supplied nine in September and three more in October - conveniently delaying the programme. All the trailer chassis were built by J Brockhouse & Co Ltd, West Bromwich, Bristol and Wylie-Harris then taking them and fitting the producer gas equipment. As a matter of passing interest, LUT had a further involvement with the Brockhouse company when the Brockhouse Group acquired the Sunbeam Trolleybus Co in 1946 from the Rootes Group, later selling it to Guy Motors in 1948.

The necessary cleaning and fuelling plant was installed in a lean-to shed at Atherton. There was further delay in obtaining the necessary accessories, such as connecting pipes and engine adapters.

From March 1943 11 double-deckers were converted over the following 12 months, roughly at monthly intervals: TD2s 40-44, then TD1s 183, 185, 188 and finally three on-hire Oldhams - O.70/4/5.

As elsewhere the lower power output limited the routes on which they could be used and the staff disliked them intensely. By late 1943, with the programme failing, the government had reduced LUT's quota to 26, in March 1944 it was halved to 13 and the whole thing was given up in September - the last of LUT's 11 producer gas-powered buses running on 26th September.

There was no government financial support for the programme. Operators were forced to buy the trailers and to take delivery, even if they were not needed or used, and the costs had to be written off on the company's account. In LUT's case the lean-to shed was of value - it became the tyre store and tyre repair shop - and had been built with this in mind.

The best estimate of conversion dates from LUT company records is:

3/43:	two of 40-44	10/43:	a second TD1 from 183/85/88
4/43:	one more from 40-44	11/43:	the third TD1 from 183/85/88
5/43:	one more from 40-44	1/44:	two of hired Oldhams O.70/4/5
7/43:	final one from 40-44	2/44:	the third hired Oldham from O.70/4/5
8/43:	one TD1 from 183/85/88	9/44:	producer gas operation discontinued

1945 - HIRED

With the war ended the Eastbourne vehicles were required back in their home town and Risley was very quickly run down almost eliminating the demand for other than "normal" traffic. However, LUT was still short of double-deckers due in part to a start being made on the backlog of overhaul work and then in 1946 a contract to transport workers from Salford Docks to Liverpool docks requiring 7 double-deckers. The General Manager noting that whilst the latter was something of a burden, the contract was profitable. Six elderly Crossleys were hired from Ashton-under-Lyne Corporation.

From Ashton-under-Lyne Corporation

A.1, A.9

Chassis: Crossley "Mancunian"
 Engine: Crossley VR6 9.1-litre 6-cylinder diesel
 Body make: English Electric timber frame
 Body type: H28/24R highbridge
 New: 1935

A.1	ATC 973	91837	4/45	<u>10/45</u>
				10/45: engine failed, bus returned to Ashton
A.9	ATC 974	91838	4/45	<u>10/46</u>

A.3, A.4

Chassis: Crossley "Mancunian"
 Engine: Crossley VR6 9.1-litre 6-cylinder diesel
 Body make: Crossley on Metro Cammell steel frame
 Body type: H28/26R highbridge
 New: 1934

A.3	TJ 5794	91748	4/45	10/46
A.4	Ø TJ 5795	91749	4/45	10/46

A.5	Ø TF 8874	90880	4/45	10/46
A.7	TF 9657	91055	4/45	10/46

Subsequently:

A.1 sold by Ashton for scrap
 A.3, A.4 moved from LUT to Widnes Corporation - Widnes bought them from Ashton (there is no evidence that they were hired by Widnes before purchase)
 A.5 returned to Ashton and was sold for scrap, its 5LW engine being retained by Ashton
 A.7, A.9 moved from LUT to Salford Corporation, which hired them from Ashton

Vehicle orders 1945-1950

The months after the end of the war and the ending of government control and allocation of new buses saw something of a scramble by operators to place orders. Raw materials, in particular steel and aluminium, remained on government allocation to manufacturers with priority given to export orders and operators often had to hedge their bets by going to more than one supplier or an unusual supplier. Supply of bodies soon became more critical than chassis, with chassis often available and held in store awaiting capacity at the body makers. From late 1945 to September 1947 orders were placed which would cover LUT's requirements through to the end of 1950.

In LUT's case things were slightly complicated first by the retirement on the last day of 1945 of W J Wilson - the long serving Rolling Stock Engineer (LUT's title for its Chief Engineer). He had been unwell for some time; LUT had paid for all his medical treatment and arranged that he could retire with a much enhanced pension. His replacement, another long serving member of the staff, was R Hampson. Sadly he died suddenly in 1948 and in his place, from engine component makers Wellworthy, came E H Edwardes' son-in-law August H Gernaey, taking up the post of Chief Engineer on 12 April 1949. Although he was to make several changes, the selection of Guy and Northern Counties as suppliers happened before his arrival. The change to Gardner engines (E H Edwardes' other son-in-law was Managing Director of Gardner) also started before Gernaey's arrival and whilst some operators were unable to get all the Gardner 5LWs and 6LWs they would have liked, the family connections ensured that LUT had no problem.

In 1946, 1947 and 1948 fleet numbering continued the pre-war practice. The emergent gap after the highest Leyland TS11, 181, being filled by Leyland PS1s, 202-206, Dennis Lance 193-201 and Guy saloons 182-192. The other new vehicles were numbered 320 upwards. All engines are diesel and transmission details are given only for exceptions to the "normal" 4-speed constant mesh gearbox.

1946

⊙ after fleet number = nearby picture

In mid-1945 the Regional Traffic Controller asked for LUT's requirements for new vehicles. LUT applied for 25 double-deck and 25 single-deck which were approved and the necessary licences were issued. The Ministry of Supply then intervened and reduced this to 12 double-deck and five single-deck, allocating four Guy Arabs, eight Leyland PD1 and five Leyland PS1. LUT had some influence on the choice of bodywork but not, it seems, not whether they were low- or high-bridge. The prices each were roughly £2,700 double-deck, £2,550 single-deck and all were delivered in 1946.

The Managing Director noted that these would be the last "controlled" orders and that in future operators could order from who they wish. He therefore placed provisional orders for the balance, 13 double-deck and 20 single-deck, and these reflected in part LUT's preferences and also manufacturers' ability to deliver - the orders going to Leyland (four PD1) and Dennis (nine Lance double-deck, 20 Lancet single-deck). One reason for the Lancets was that Dennis offered it with a five-speed overdrive gearbox which was useful for the Tyne Tees Mersey service work.

1947

⊙ after fleet number = nearby picture

LUT found the 5LW-powered wartime Arabs underpowered and in mid-1946 LUT arranged for Gardner to supply 26 new 6LW engines which LUT would fit to the wartime Guy Arab IIs - unlike the Arab I, the Arab II chassis was designed to accept a 6LW. The 5LW engines thus released would then be fitted to new single-deckers which would be ordered without engines. The first 15 went into Dennis Lancets 336-350, which were built and delivered to Atherton without engines. The other eleven 5LWs were sent to Guy for fitting to Arab single-decks 182-192, which were part of LUT's next vehicle order.

Also in mid-1946, the provisional order for 13 double- and 20 single-deck was placed with Leyland (four PD1) and Dennis (nine Lance lowbridge double-deck, 20 Lancet single-deck) with delivery hoped for by the end of 1946 but thought likely to be 1947 - the delay caused some of the older pre-war vehicles to be kept in service.

Note that the registrations for Leylands 332-335 continue from 324-331, although the former are from the 1946 order; also that Leyland was able to offer quicker delivery of highbridge vehicles. The 5LW-engined Dennis Lancet and the 6LW-engined Lance were unique to LUT.

332-335

Chassis: Leyland "Titan" PD1A
Engine: Leyland E181 7.4-litre 6-cylinder
Body: Leyland, steel frame

1948

⊙ after fleet number = nearby picture

By the middle of 1946 it had become clear that bodies would be the critical item in obtaining new vehicles and an order was placed for 20 double-deck and 20 single-deck bodies; the chassis order was not placed until the end of 1946. They became 182-192 (Guy Arab/Roe single-deck), 356-365 (Leyland PD1/Leyland), 366-374 (Leyland PS1/Roe), and 375-384 (Guy Arab/Weymann double-deck), the double-deckers were all lowbridge.

191 in Lower Mosley Street Bus Station, Manchester, having worked a Liverpool - Manchester journey on the Tyne - Tees - Mersey service.

1949

⊙ after fleet number = nearby picture

In mid-1947 a further order was placed for 20 more double-deckers and 20 more single-deckers for the 1949 vehicle needs and followed LUT's usual mix of Leylands, Guys and Dennises. They were numbered 385-424.

The order for ten of the Guy double-deckers was influenced by a need to have something to match Ribble's new Leyland/Burlingham "White Lady" double-deck coaches which were being built, inter alia, for the joint LUT/Ribble/North Western X60 Blackpool express service. Fortunately Northern Counties had a body based on a Guy Arab chassis built in 1948 for Brighton-based Southdown Motor Services Ltd - it was not a special design for LUT although, unlike Southdown, LUT would adopt it and buy more. Unlike the Ribbles, the Southdown design was of highbridge layout. It also had Northern Counties' patented ventilation system, described on the next page. 385-394 were also LUT's first 8ft-wide buses - 375-384 and 410-414 were 7ft 6in, as were the single-deckers. LUT's version of the body was called the "Limited Stop" and had high-back express service seats, with the neat varnished timber grab rail tops that had first appeared on LUT seats in the 1920s, and the bright, colourful interior trim reflected a statement by Ned Edwardes that bus interiors should be more cheerful and comfortable.

The Northern Counties patented ventilation system(s)

Intended to provide forced ventilation, in particular for the upper (smoking) saloon of double-deckers, there were three versions, of which the last was by far the most successful as it involved no moving parts. This last type was also fitted to single-deck bodies.

The first version gave forced ventilation to the upper (smoking) saloon. The air was changed by extraction through grilles in the saloon ceiling, passing down a bulky vertical "grab rail" duct at the top of the staircase to a fan box beneath the rear seat and thence to the outlet in the rear of the bus. The only external evidence was the air outlet, which was hidden behind the rear route number indicator box on some. This type was fitted to LUT 385-394; **it is not certain if these ten had a route number box or a simple cover over the outlet.**

The second version, named "Twin", added a similar fan driven system for the lower saloon. Numbers 425-436, 447-451 and 462-465 had this arrangement. The outlet is shown in the picture of the back of 432 below - rear number indicators were only fitted to LUT's Limited Stop double-deckers.

The fan arrangement was not over reliable and differing air pressures at the rear of the bus probably made the system less effective than was the intention.

The third, most successful (and most familiar) version was very different and was fitted to buses of several operators, including LUT. The upper-deck ceiling was pierced with a decorative pattern of holes through which air was drawn and fed via ducts to the engine air intake, the most noticeable being the duct down the necessarily wide front centre pillar of the upper deck. Double-deckers 466-471, 489, 506-515, 532-551 and single-deckers 479-488, 490-494, 531 were equipped. The picture of 515 shows the duct at the centre of the upper-deck front windows and, at the corner of the cab and lower deck bulkhead, the duct to the engine air intake. The right hand picture shows the interior of crush-loader 486; the air intake holes, drilled in a pattern in the ceiling, are clearly visible. Double deckers had a similar pattern along the centre of the ceiling.

Coloured steering wheels

385-394 were LUT's first 8ft-wide vehicles and to indicate this to drivers the batch had steering wheels covered in red plastic instead of the usual black. This was continued for a time on other 8ft vehicles. Subsequently it changed to red steering wheels for highbridge double-deckers and, later, white steering wheels for 30ft rear-engined double-deckers, all other vehicles having black. The arrangement was not always rigorous and on repair or overhaul a red steering wheel was sometimes fitted to a lowbridge bus.

1950

⊙ after fleet number = nearby picture

The order for the 1950 vehicle requirement was placed in 1947 – 10 single-deck and 12 double-deck, all Gardner-engined Guy Arabs. In mid-1950 the government somewhat suddenly authorised an increased 27ft overall length for double-deckers, 30ft for single-deckers and generally unrestricted use of 8ft-wide vehicles and the orders were changed to take advantage of this. The Limited Stop body was redesigned as a four-bay to the newly-authorised overall length. Use of the Limited Stops was extended to inter-town services such as the Bolton - Manchester 8 and Manchester - Blackburn X66. The single-deck order was changed from dual-purpose vehicles (which LUT called "coaches") to full luxury coaches to the new 30ft x 8ft dimensions - Roe was not normally associated with coach bodies. They were delivered for the 1951 "season". All subsequent LUT vehicles were 8ft-wide or greater. Both batches introduced a revised livery - grey with red upperworks for the double-deckers and red with black roof and mudguard areas for the coaches.

From 1950 an LUT vehicle usually featured on the Northern Counties stand at the Commercial Motor Show and would have a special high quality finish. 436 was at the 1950 Show and it and 428 differed from the other "Limited Stops" in having translucent upper-deck cove panels. Limited Stop 434 was in the Show's demonstration park, it had the then fashionable coloured-wall tyres - usually white, in this case they were grey matching that of the LUT livery (shown in the picture below).

1951

⊙ after fleet number = nearby picture

The demand for new vehicles began to wane and the next order, for ten double-deckers only, was placed in mid-1949 for 1951 delivery. Numbered 452-461, they had "off the shelf" Weymann bodies with Birmingham-style "new look" bonnet/engine cowls and the high-back seats used on the "Limited Stop" body; their registration numbers were booked at the same time as the delayed coaches. They introduced a further new livery of all red with a single wide primrose band.

The five Fodens seem to have been something of an opportunistic purchase in late 1950 - Foden was making one of its intermittent forays into the passenger chassis market. The Foden engine cowl/bonnet blended well with the lines of the "Limited Stop" body. The first three were finished in red and grey and the last two, 450/51, were in the red and primrose livery with a primrose band much narrower than on the Weymann body; the latter style was adopted as standard.

Subsequent owners

461 MTJ 100 Damaged in accident, 6/66, and withdrawn.
 Body scrapped 12/66, chassis overhauled with parts cut away,
 for instructional use in the LUT driver training school at Atherton
 Greater Manchester Museum of Transport, 5/79, and sold for scrap

LUT Guy Arabs fitted with the Birmingham-designed so-called "new look" bonnet and cowl, had this neat black and silver "LUT" cast metal badge at the top of the grille. Many were later painted over in red.

1952/53

⊙ after fleet number = nearby picture

The 1952 vehicle requirement was 10 double-deckers, 6 coaches and 10 underfloor-engined single-deckers. There were three LUT vehicles at the 1952 Commercial Motor Show - coach 478, single-deck 482 and Limited Stop 489.

Guy Arab double-deckers 462-465 were perhaps the least novel; they had the "Limited Stop" body of same design as 425-436 but with the Birmingham-style "new look" engine/radiator cowl. Similar 466-71 and show exhibit 489 (an additional order) had the third version of what was now called the Northern Counties' patented "air conditioning" system in which the upper-saloon air was ducted to feed the engine's air intake. There was now no rear air outlet and single-deckers 479-488 had no rear route number indicators although the other single-deck buses new in 1953-1956 had them.

LUT's first underfloor-engined chassis were 472-478 - seven Guy Arabs with, again, unusual Roe coach bodies. The seventh, 478, was an addition to the original order for six and was built for the 1952 Commercial Motor Show. Single-deckers 479-488 introduced a further new make of chassis to the fleet - Atkinson - albeit with Gardner engines. Much of the development of the Atkinson underfloor-engined chassis had been done by Atkinson in conjunction with North Western, whose Chief Engineer had planned for a fleet of them. The BET Group chose not to proceed with the plan and LUT become the largest user of Atkinson's UK bus chassis. 479-488 were the medium weight PM model and 44-seat bus 482 featured at the 1952 Show. All the underfloor-engined single-deckers - buses and dual purpose - had a rear route number indicator box.

The specification for four of the Atkinsons was changed to the "standee" or "crush loader" high-capacity body, developed by Northern Counties in conjunction with L G Stockwell, the then General Manager of the Stalybridge, Hyde, Mossley & Dukinfield Transport & Electricity Board. The latter had the first example, albeit on a Daimler chassis, and it was at the Show. Manchester took two on Leyland Royal Tigers but, as with the Atkinson chassis, LUT would be the largest user of the type. Unpopular with passengers in normal service they proved very useful on the 87/88 Eccles - Trafford Park service which passed under a low bridge and carried heavy peak hour loads.

 9-10/52: Commercial Motor Show Exhibit, Northern Counties stand
 4/56: badly damaged in accident in Golborne
 -/57: rebuilt largely to the original design by Northern Counties but with new Manchester-style high-back seats
 Principal visible difference was no flare in the skirt panelling
 Although it was not a new body it was given a new Northern Counties body number - 5079

Subsequent owners

489 OTE 72 Allenways, Birmingham, contract fleet, 1/68; void -/70.

Before and after: 489 new and rebuilt.

1953

⊖ after fleet number = nearby picture

The vehicle order for 1953 was 10 double-deck and 10 single-deck. In addition, six pre-war Leyland Tiger chassis were refurbished and fitted with new Plaxton coach bodies as part of LUT's development of its private hire and coaching business in a competitive market in which buses with coach seats were becoming less acceptable.

The single-deckers were Atkinsons but had the lighter weight chassis and 5-cylinder engines. The single-deck body order was split between Northern Counties and Roe with two from Willowbrook - the latter had developed a lightweight body for the chassis as part of North Western's (frustrated) development work and persuaded LUT to buy two. The bodies on "crush loaders" 490-94 differed from the previous year's in having larger side windows instead of "standee" windows.

The last five of the ten Guy Arab "Limited Stop" double-deckers had platform doors - another innovation for the LUT fleet.

490-494

Chassis: Atkinson PL745H
Engine Gardner 5HLW 7.0-litre 5-cylinder
Body: Northern Counties steel frame
Body type: B34C "crush loader", 26 standing high-back seats
 Northern Counties engine-induction ventilation

1954

⊖ after fleet number = nearby picture

Intended for the Tyne-Tees-Mersey service for which they were first choice until 1962, numbers 516-521 had the lighter weight Guy underfloor-engined single-deck chassis but with 6HLW engines to give better performance; their interior fittings were almost of coach quality. Externally, the bodies were to Weymann's standard BET-group bus design but with a curved lower edge to the windscreen, matching LUT's Roe- and NCME-bodied 44-seat single deckers. Crush loader 531 had standee windows as 485-488; it was the last of the type to be built.

The ten Guy Arab double-deckers were similar to the previous year's deliveries, three having platform doors. They were the last with the "Limited Stop" body.

The LUT vehicles at the 1954 Commercial Motor Show were "crush loader" 531 and Arab "Limited Stop" 532.

516-521

Chassis: Guy "Arab LUF"
Engine Gardner 6HLW 8.4-litre 6-cylinder
Body: Weymann steel frame
Body type: DP40F, express service seats

New in bus livery, from 1961 they were repainted in coach livery then returned to bus livery from 1964, although they were shown in the fleet list as buses from 1959. LUT normally repainted its coaches every three years.

Myth: 532-541 have been quoted as owned by SLT from new until 1958. They were always owned by LUT.

1955/56

⊙ after fleet number = nearby picture

With the retirement of E H Edwardes at the end of March, a new general manager was appointed. Cyril Oakham had been Chief Engineer at Manchester Corporation since 1951 and previously Rolling Stock Engineer at Newcastle-upon-Tyne Corporation, and before that with BUT and London Transport. The other candidates on the short list were A H Germaey (LUT Chief Engineer), and W G Hunniball (general manager's assistant, Ribble) - Edwardes had expected to appoint son-in-law Germaey. The other directors thought LUT's methods dated and widened the short list, adding former LUT man Frank Lythgoe (General Manager, Middlesbrough) who withdrew on salary grounds, and C W Wroth (General Manager, Potteries Motor Traction). After interviews, they appointed Oakham; Edwardes declining to vote. Oakham had a challenging task.

The bodies on 542-551 were to Northern Counties' revised design with a more upright front profile and generally more conventional style than the Limited Stop. They were the last with the patented ventilation system. 552-561 would be LUT's final Atkinsons and also its last Roe bodies, ending a relationship with Roe that went back to 1930. Six wartime Guys were rebodied with lightweight Northern Counties bodies, which had less deep passenger windows as part of the weight reduction, and two BET-standard Weymann-bodied Leyland Tiger Cubs. The Guys, Atkinsons and Tiger Cubs were owned by South Lancashire Transport ("SLT") - the reason simply to use up SLT's substantial cash reserves. Used indiscriminately on LUT services the fleetname was Lancashire United and the only external or operational evidence was the legal owner lettering.

542-551

Acquired for spares

In late 1955 a single-deck Guy Arab was bought from dealer AMCC to provide a source of some spare components. New to OA Bartle & Son, Potton, Bedfordshire in 1946 it had been taken over with Bartle's business by United Counties Omnibus Co Ltd, Northampton in July 1953 and numbered 140. Withdrawn later in 1953 it had been sold to AMCC in 10/54. LUT used parts from it as needed and the remains were sold for scrap in 1957.

1956/57

⊙ after fleet number = nearby picture

Although a trolleybus man, the Cyril Oakham's first task was to replace SLT's ageing fleet with diesels and his vehicle policy initially followed that of Manchester Corporation - Leylands and Daimlers with Metro Cammell bodies - his Chief Engineer was perhaps not entirely happy with this. For the trolleybus replacement, orders were placed for 14 and then a further 10 Daimler CVG5 and 14 Leyland PD3s. The body order went (MCT-style) to Metro Cammell rather than the associated Weymann, even though Weymann had a long relationship with LUT. More Northern Counties Guys were ordered for LUT fleet replacement; Atkinson had withdrawn from the bus market and with no suitable Guy chassis available, the single-deck order went to Leyland with Duple Midland bodies.

The Daimlers introduced a revised interior of the London Transport-style that Oakham had also introduced at Manchester – a green and fawn interior with LT-style moquette and the more usual style of bus seat with a separate horizontal steel grab rail above the seat back, in high- and low-back versions. There were no more of LUT's comfortable seats with their neat varnished hardwood grab rails which had been a feature of LUT's buses since the delivery of SLT's Guy trolleybuses back in 1930. A very visible change was the introduction of Manchester's front and side indicator layout (but nothing at the rear) and the Daimlers could easily have been mistaken for a Manchester vehicle - indeed there was some misguided local newspaper speculation that LUT had been sold to Manchester Corporation Transport.

The transmission chosen for the Daimlers reflected LUT's long held view that fluid flywheel transmission increased fuel consumption and was not appropriate for LUT's services - and the alternative proved to be a problem. At the time and partly as a result of pressure from the BET group about fuel consumption, Daimler was offering an alternative to the fluid flywheel gearbox coupling in the shape of the Twiflex "Link" centrifugal clutch. Potteries bought 30 CVG5s fitted with it and LUT's 24 were also so equipped. It was not a success, drive take up was dependent upon engine speed and if it dropped as the drive was taken up, the clutch would release, then engage, then release again and so on - resulting in unpleasant "kangaroo" jerks as the bus moved off. On steep hills with a heavy load, the 5-cylinder Gardner would often not produce enough torque / speed combination firmly to engage the clutch at all. Daimler withdrew the option within a year; LUT persevered but 570-593 were unpopular with crews and garage staff and most had a shorter life than the contemporary Guy Arabs. It is interesting that, whilst at Manchester, Oakham had tried a Twiflex clutch - and found it wanting. The Guy Arabs had 5LW engines and a "Manchester" style 36-seat upper-deck.

Guy Arab 603 was the first 30-ft long two-axle double-decker in the North West and was on the Northern Counties stand at the 1956 Commercial Motor Show.

570-593 were owned by SLT from new, the last twelve, 582-593, in a sense "replacing" single-deckers 552-563 which were transferred to LUT ownership. 570-581 were initially used on the LUT/St Helens Corporation joint Atherton - St Helens motor bus service which replaced the trolleybuses; the others were used indiscriminately on other SLT or LUT services.

1958

⊙ after fleet number = nearby picture

Leyland PD3s 644-657 were bought for the Leigh – Bolton former trolleybus service, for which they were first choice - it had heavy loadings and a long steady climb out of Bolton and had always needed six-wheel trolleybuses, they arrived slightly late. The first three, 644-6, entered service on 14/9/58 and were the first buses in UK to enter service with fixed windscreens. The balance followed later in the month.

There was no need for the higher power (and higher fuel consumption) of the O.600 engine on most of LUT's services and orders reverted to the 6LW-powered Guy/Northern Counties combination, albeit 30-ft long and with "Manchester" indicators and seats. 632 was the 1958 exhibit at the Commercial Motor Show.

605 was fitted with a Smith's heater system in 1961, which had two large air intake grilles either side of the front indicators. It was a pilot installation for the system which was then fitted at build to double-deckers 103 onwards. The front grilles were similar to Cave-Browne-Cave heating system grilles and are often wrongly identified as Cave-Browne-Cave units.

China Motor Bus, Hong Kong

The 11 FTB-registered LUT Guys were bought from North's in October / November 1970 and shipped to Hong Kong as deck cargo on the MV Bengloe arriving at the end of February. The plan was to equip them with rear platform doors and operate them with conductors but the one-man programme had gathered pace by the time of their delivery and CMB decided to rebuild them for one-man operation with a double-width forward entrance and staircase. This was a sizeable job, so they were set aside until workshop capacity allowed the work to proceed - the first one entered service in late 1971 and the last not until September 1972. The planned purchase of five more (604-606,610,613) was cancelled.

1959

⊙ after fleet number = nearby picture

Fleet numbering restarted at 1 in 1959. The contract for the single-deck chassis went to AEC - LUT's first since the 1920s.

Oakham's influence continued with the ten Daimlers which had normal clutches and David Brown synchromesh gearboxes rather than fluid flywheels and preselector gearboxes, the synchromesh system being of Porsche design. The Guy Arabs were fitted with Meadows gearboxes also with Porsche-design synchromesh, instead of the usual Guy constant mesh unit. Both types proved unsatisfactory and were all later replaced with the standard Guy constant mesh box, in the case of the Daimlers effectively converting them to the CCG6 model.

The Dennis Lolines were for service 20 (Farnworth - Clifton - Swinton - Patricroft - Irlam - Cadishead) which then passed beneath the low bridge at Patricroft Station, close to Gardner's works; its loadings required full size double-deckers. The low overall height and high line of the windscreen did not provide sufficient space for the full Manchester layout and the Lolines had only number box plus a standard intermediate box in which intermediate points and final destination was displayed.

Fleet number 27 was a test bed for one of the prototype 6LX engines - the engine was owned by Gardner, passing to LUT's ownership much later in the vehicle's life. The bus retained its 6LX into preservation but, although very satisfactory, it did not change the Chief Engineer's view that, given LUT's relatively flat operating area, a 112hp 6LW was quite sufficient for a 30ft Guy Arab - the O.600 engines in LUT's PD3s were derated to this power.

Diversification

On 1st September 1960, apparently prompted by concerns over the shrinking of passenger traffic and the corresponding increase in affordable private motoring, LUT bought the Bolton-based car dealership and garages business of Waterloo Motors (Bolton) Limited.

The firm had two locations - with its main premises at Blackburn Road and a branch at Halliwell Road - and held the area dealership for Daimler cars and, of wider appeal, agencies for the Rootes group - Hillman, Humber, Sunbeam, Singer cars and Commer vans and trucks. The business was expanded to include horse boxes (Commer based), small boats and Perkins outboard motors, Renault cars and Massey Ferguson Tractors, and also offered a heavy recovery service for which an AEC Matador was acquired. Most of LUT's service vehicle stock and cars was then supplied by the firm.

After a promising start the business failed to meet expectations and it was sold at the end of December 1963. There was board-level disagreement over the decision to sell the business and this may have contributed to C C Oakham's sudden departure from the company in March 1964 - he left the bus industry and moved into a motor sales and garage business.

WATERLOO MOTORS (BOLTON) LTD.

On 31st December 1963, at an acceptable purchase price, your Company disposed of its interest in Waterloo Motors (Bolton) Ltd.

The acquisition of this subsidiary company three years ago, for the sale and servicing of private motor cars, coincided with the period of the pay pause. This sudden change in national policy had very serious repercussions on the motor car industry, both for the sale of new vehicles and in the second-hand car market. As with all other companies engaged in this class of work, new business was hard to get and the earlier hopes centred upon an expansion of business were not realised. In those circumstances your Directors felt that your company ought to dispose of the subsidiary.

58

Chassis: Guy "Wulfrunian"
Engine: Gardner 6LW 8.4-litre 6-cylinder
Body make: Northern Counties, steel frame
Body type: H43/30F, low overall height (13ft 5in)
 fluorescent interior lighting

Three Wulfrunians were ordered - one 30ft-long 15ft 4in-wheelbase front-entrance model with epicyclic gearbox. The other two, intended to be numbers 59/60, were to have been 30ft-long 18ft-wheelbase 73-seat rear-entrance models with 6LW engines, ZF synchromesh gearboxes and full-width cabs in which the engine was centrally-mounted rather than the offset of the front-entrance model. They had / would have had the Wulfrunian's standard Cave-Browne-Cave cooling and ventilation system.

The first of the three was built and displayed at the 1960 Commercial Vehicle Show (Sep/Oct), at which it seated 43/32 and had a 6LX engine, which was changed to a 6LW before it entered service on January 1st, having been used for driver familiarisation during December. It quickly proved unreliable and troublesome, seeing little useful service, mainly from Atherton alongside the PD3s on the 82, and was sold after a year to West Riding where it joined most other Wulfrunians. The order for the two rear-entrance Wulfrunians was then cancelled and replaced by one for two Guy Arabs.

97-102

Chassis: Daimler "Fleetline" CRG6LX
Engine: Gardner 6LX 10.45-litre 6-cylinder
Body make: Northern Counties, steel frame
Body type: H43/33F 30ft long,

LUT was one of the first to order Daimler's Fleetline. The bodies were 13ft 4½in overall height and had side panels above the engine cowl.

Reflections on the flat windscreen from interior lighting caused problems for drivers; 99 and 102 were quickly modified to have a slight slope. This was introduced on later batches but 97, 98, 100 and 101 were left unaltered.

1963

⊙ after fleet number = nearby picture
>PTE = transferred to GMPTE on 1 April 1981

The 17 Guy Arabs had the Mk V chassis frame, suitable for front entrance bodywork which was fitted to the last of the batch. The first of the six Fleetlines was built early for the Northern Counties' stand at the September 1962 Commercial Motor Show. For this and later year's deliveries the bus upholstery was changed from green to red. The Reliance single-deckers were LUT's first 36ft-long vehicles; they had the larger AH590 engine and Plaxton Highway composite-framed bodies - two buses and six coaches.

Acquired March 1963 from Stringfellow Brothers Ltd, Wigan

LUT bought the Atherton, Hindley Green and Tyldesley-based licences of Stringfellow Brothers Ltd ("Silver Queen Coaches"). Two Bedford coaches were included in the deal but LUT sold them at once to coach dealer Les Gleave Ltd of Audlem. Stringfellow's retained their Wigan-based business and fleet, selling it to Glover, Orrell, Wigan, in 1965.

Stringfellow's smart red and grey livery was adopted for LUT's new coaches from 1965 and the red/grey was later used on the whole fleet.

1964

⊙ after fleet number = nearby picture
>PTE = transferred to GMPTE on 1 April 1981

The principal event of the year was the departure of General Manager Cyril Oakham after a serious disagreement over policy with his fellow directors. He left in March, generously compensated for his loss of office. It was widely acknowledged that he had made huge progress in updating LUTs systems and methods. His replacement was a traffic man rather than an engineer - appointed General Manager on 24th June, Robert (Rob) Bailey joined LUT on 1st September, having been Traffic Manager at Potteries Motor Traction.

The 1964 orders, were 12 Guy Arabs and 10 Fleetlines. After three years of choosing the AEC Reliance, the order for the single-deck chassis went to Leyland - eight Leopards with Plaxton Highway bodies, some fitted as coaches, some as buses.

Guy Arab 170 was the 1964 Commercial Motor Show exhibit, at which it was fitted with a rearward-ascending staircase rather than LUT's usual forward-ascending one - it was altered to LUT's version before entering service. Delivery of the Guys ran over the year end resulting in a jumbled mix of B and C registrations which, under the regulations current at the time, had to be allocated "as and when they arrived".

1965

⊙ after fleet number = nearby picture
>PTE = transferred to GMPTE on 1 April 1981

There was a sign of things to come and of consequent problems in the 1965 vehicle intake of 36ft-long Leyland "Leopard" buses. Built as 50-seaters for one man operation, there was strong union opposition to the latter, resulting in 205-208 being reduced for a time to 46 seats. The eight "proper" coaches with Plaxton "Panorama" bodies finished in the smart red and grey livery used by Stringfellow, whose Atherton tours and excursions had been acquired in 1963. The red and grey would eventually be adopted for the whole fleet.

1966

⊙ after fleet number = nearby picture
>PTE = transferred to GMPTE on 1 April 1981

The four coaches had Plaxton Panorama bodies whilst Tiger Cub 241, the 1966 Commercial Motor Show exhibit, had a new design of Northern Counties body. It also showed the direction which LUT vehicle policy was to take - high capacity, dual door single deckers with increased accommodation for standing passengers - something that would become the norm in South Lancashire and Merseyside, in contrast to the rear-engined one-man double-deckers chosen by many of the Greater Manchester-area municipalities.

211-213

⊙ after fleet number = nearby picture
>PTE = transferred to GMPTE on 1 April 1981

With the ending of production of the Arab chassis 265-290 were LUT's last Guys, ending an association that went back to 1930 with SLT's trolleybuses. Maybe balancing this in some way were LUT's first Bristols for 40 years. The choice of the Bristol RE for 20 single-deckers was in part to continue using Gardner engines and in part because the RE was perhaps the best of the troublesome rear-engined chassis of the time.

The high-capacity single-deckers were used to convert double-deck services to one-man single-deck operation - limited one man operation of some single deck services having been in operation since late 1958. Of intermediate (32 and 33ft length) they were certified to carry (according to type) 16, 18, 19 or 20 standing passengers but LUT had strong union branches, whose views on what was acceptable could differ from garage to garage, and the number of standing passengers actually carried varied according to the state of union agreements and negotiations. The continuing purchase of composite-framed single-deckers by a major operator was somewhat unusual.

242-244

Chassis: Leyland "Tiger Cub" PSUC1/11
Engine: Leyland O.400 6.54-litre 6-cylinder
Body make: Marshall, steel frame, standard BET design
Body type: B40D + 16 standing, 32ft long

Hire and sale of 242-244

In 11/79 242/44 (but not 243) were withdrawn and taken on hire by W Stonier & Sons Ltd, Tunstall (then owned by Berresford, Cheddleton), with a view to the purchase of 242-244 by Stonier/Berresford. 243 remained in LUT service until withdrawn 8/80.

Matters then developed as follows:-

- 244 was damaged in May 1980 when on hire to Stonier and taken out of service by them
- the need for its repair and costs thereof were disputed by Stonier because its Certificate of Fitness (CoF) expired in August 1980
- LUT therefore terminated the hire of both 242 and 244 and took 242 back from Stonier on 29 June 1980,
- 244 remained at Stonier's, out of use but unrepaired
- 242 then went back into service with LUT and it and 243 were withdrawn when their CoFs expired in August 1980.
- 243, not being involved in the dispute, was sold for scrap a month after it was withdrawn
- 242, being involved in the still unresolved dispute of the terminated hire and 244's repair, was held in store at LUT
- 242 passed to the PTE on 1/4/81 with the rest of the LUT fleet and was sold in 6/81.
- 244, still unrepaired and still at Stonier's, was formally withdrawn from the LUT fleet 8/80
- 244, still unrepaired, was bought by Stonier / Berresford in December 1980 and used by Berresford for spares

1969

⊙ after fleet number = nearby picture
 >PTE = transferred to GMPTE on 1 April 1981

The high capacity single-deck policy was now firmly in place and, for the first time since 1927, there were no new double-deckers. For the first time too, since 1945, there were no Northern Counties bodies. The three AEC Swifts were something of an experimental purchase for assessment. They did not prove a success and were sold after four years to St Helens Corporation, which had a large fleet of Swifts. By chance their LUT fleet numbers fitted neatly into the existing St Helens series.

318-337 were the first new buses in the red and grey livery, hitherto used only on the coaches. Although they saw a return to Northern Counties for bodies, these 20 LH6Ls proved unsatisfactory. Intended by their manufacturer as a lightweight bus for country service they were too light and insufficiently robust for LUT's services. When the time came to consider fitting of Clippercard cancelling equipment in 1979, the PTE decided to dispose of them. They were all withdrawn during the first week of November and sold at once.

1970

⊙ after fleet number = nearby picture
 >PTE = transferred to GMPTE on 1 April 1981
 wdn = withdrawn from service

On paper the Gardner-engined Seddon RU looked a good alternative to the RE. It was being offered at a very competitive price and LUT placed a large order for 50. Although LUT specified some changes, the most visible being a front-mounted radiator like the Bristol RE. The chassis was not entirely successful, the transmission between gearbox and axle being one of the weaker points.

338-341/3/4/6/50-54 entered service the following month

PTE fleet

The renumbering of some of the RUs still in service to 347-349 and (later) 354 was necessitated by the former North Western Bristol REs already numbered 315-344; the Seddons with numbers which clashed with these were numbered into the first available gaps above 344. The Seddons already withdrawn by LUT were not renumbered into the PTE series.

Reserve fleet

When withdrawn by the PTE some of the RUs, including 338/39, 341, 350/51/52/53, 342 (as PTE 347-354) were held in reserve as spares for the second batch of RUs which was sold in late 1982. 339 (as 348) was in service for a time from 8/81.

Confusion over two 354s

On reinstatement in 5/81, 342 (WTD 675H) was renumbered 354 - the first available gap in the operating fleet at the time. However, 354 (WTD 687H) was still in stock although withdrawn and this appears to have caused an error in the PTE's records, 342 (as 354) apparently being confused with the still-in-stock but withdrawn 354 (WTD 687H) resulting in 342 as 354 (WTD 675H) and 354 (WTD 687H) both being deleted from the stock list when 354 (WTD 687H) was sold. Forgotten, WTD 675H lay around until the error was discovered in the preparations for privatisation; 342 as 354 (WTD 675H) was promptly sold in mid-1986.

Subsequent owners

All sold for scrap to Barnsley area breakers.

1971

⊙ after fleet number = nearby picture
 >PTE = transferred to GMPTE on 1 April 1981
 wdn = withdrawn from service

The few Fleetlines were for joint services on which the agreement with the PTE required their use, principally the 82 Bolton - Leigh service. 358 was exhibited at the 1970 Commercial Motor Show. Their dual-door bodies were to SELNEC's standard design but with changes to the front end and differed from the PTE's standard in being 33ft-long rather than the PTE's 9.5m (31ft 2in).

358-363

1973

No new vehicles were delivered in 1973; four vehicles were on loan from the PTE.

On loan from SELNEC PTE 1/8/73 to 30/4/74, by which time the PTE had become Greater Manchester PTE

In 1973 Mercedes Benz buses were very unusual in the United Kingdom and there was strong opposition from several councillors and borough councils when they discovered that SELNEC had bought two Mercedes-Benz underframes, let alone to it operating them in their areas. Their bodying at Northern Counties was kept confidential and in order to get them into service without political problems they were sent "on loan" to the formally independent LUT fleet, neatly solving the difficulty. Administratively they were allocated to the PTE's "Reserve Pool". LUT used them principally on service 83/84 (Leigh – Mosley Common – Swinton – Farnworth). When the fuss had died down they were returned to the PTE and allocated to Oldham. LUT used the SELNEC fleet numbers, EX54/55.

EX54	WVM 668L	Mercedes-Benz 0305	305220-20-002252	Northern Counties 7574	B43D	new 7/73 to LUT 8/73
EX55	WVM 669L	Mercedes-Benz 0305	305220-20-001379	Northern Counties 7575	B43D	new 8/73 to LUT 8/73

Vehicle exchange for Videmat operation

When two extra dual-door double-deckers were needed for LUT's duties on the 82 Bolton to Leigh service which used Videmat "self service" ticket equipment, the PTE arranged to exchange LUT's single-door 399 and 400 (RTJ 427-28L) with the PTE's former-Bolton Atlanteans 6789-90, which were fitted with the Videmat equipment, reducing the lower-deck seating by two. The exchange lasted from 21 December 1973 (to service 9 January 1974) to 28 June 1974, more new dual-door LUT Fleetlines by then being available. 399 retained its LUT number but PTE fleet number 400 was a SELNEC Cheshire Bristol VR and RTJ 428L was therefore allocated PTE fleet number 9400. The picture below shows 6790 working for Bolton in April 1973; at that time it did not have Videmat, payment being with the more usual farebox.

6789	OBN 289H	Leyland PDR1A/1	901262	East Lancs	6821	H43/27D	1/70
6790	OBN 290H	Leyland PDR1A/1	901322	East Lancs	6829	H43/27D	2/70

1974

⊙ after fleet number = nearby picture
 >PTE = transferred to GMPTE on 1 April 1981
 wdn = withdrawn from service

Fleetlines 404-413 had been on order for 1973 delivery with 10 more on order for delivery in each of 1975 and 1976 but with little hope of on time delivery. A prolonged strike at Gardner's combined with the move of Fleetline production from Coventry to Leyland caused long delays in Fleetline deliveries. At the end of 1974, wishing to continue to have Gardner-engined double-deckers, the LUT Board ordered 45 Bristol VRT with Gardner 6LX engines and Northern Counties bodies.

This time the PTE intervened. Not wanting to add to the 25 Bristol VRs it had unwillingly taken into stock as a result of its take over of the majority of the North Western Road Car Co (it had tried hard either to cancel or sell them) and having decided to exercise its option to buy LUT, the PTE directors overruled the LUT Board, cancelling the order for 45 VRs and increased the PTE's Fleetline orders to a total of 220, of which 70 would be for LUT. Delivered in 1978-1980, all 220 were intended to be numbered 8001-8220 in the PTE series as a step towards integration of LUT. However the need for careful management of staff relations caused those for LUT to be numbered in the existing LUT series (505-529, 542, 570-613), the PTE fleet ones becoming 8001-8150. Also, LUT's two existing orders for 33ft Fleetlines were altered to be to the PTE's standard 9.5m version and merged into the PTE's bulk order. Manchester-trained Ken Holt was appointed the PTE post of General Manager Designate with a remit to begin aligning LUT practices with those of the PTE, becoming General Manager when the PTE took over LUT in 1976, Rob Bailey moving to another role within the PTE.

The order for coaches was also altered. Originally for three 10m-long Leopard/Plaxton and two 11m-long Leopard Plaxton in 1974 and the same again in 1975. The PTE decided that the 1975 coaches were not needed and the 1975 order was altered to buses. The 1974 11m coaches were then renumbered from 431/32 to 428/29, next to the other 1974 coaches and keeping the buses in a block, 430-434. The order for 35 Plaxton-bodied Leyland Leopard buses for delivery in 1975/76 was allowed to remain. Although the PTE had decided to standardise on the 10.3m single-door Leyland National, the 35 Leopards, which arrived in 1975/76 as 430-464, were a curious mixture of different lengths and single or dual doorways - the majority being 11m long.

The 1974 Commercial Motor Show Exhibit on the Northern Counties stand (it would be the last of a long line) was 424 which had the stylish new body design that had first appeared on SELNEC's two Mercedes. A result of the 1974 local government reorganisation and the computerisation of motor tax records was that the former Bolton, Bury and Rochdale index marks plus one from Blackburn and two former Lancashire ones were reallocated to the new vehicle licensing office at Bolton, which then had BN, CB, DK, EN, TD, TE, WH, and was where LUT buses were then licensed, the first instance being 424.

427	XTB 752N	7402782	7410LX505	8/74	3/81	Martin

Much of LUT's coach fleet was normally delicensed for the winter season (October - March) and in accordance with this, 425-427 were delicensed for the winter in October 1980. It was decided that with the coming merger into the PTE fleet, the PTE would have an excess of coaches and 43-seaters 425-427 were surplus. They were not relicensed but were retained until March 1981 when they were sold.

431-432 renumbered in 6/75 to 428-429

Chassis: Leyland "Leopard" PSU3B/4R
 Engine: Leyland O.680 11.3-litre 6-cylinder diesel
 Body make: Plaxton "Elite Express III"
 Body type: C51F 11m long

431 > 428	XTB 748N	7402779	7411LX606	8/74	>PTE 33, wdn 6/81, sold 6/81
432 > 429	XTB 749N	7402778	7411LX607	8/74	>PTE 34, wdn 6/81, sold 6/81

Fleet numbers 428-430 were initially allocated for three more 10m PSU4 and 433-434 to two more 11m Leopard coaches to be delivered in 1975. The 1975 order was then changed to one for buses, which arrived in August 1975 and were numbered 430-434, coaches 431-432 (XTB 748-9N) being renumbered 428-429 in June 1975.

Much of LUT's coach fleet was normally delicensed for the winter season (October - March) and in accordance with this, 428-429 were delicensed for the winter in October 1980, passing thus to the PTE. They were not relicensed and were sold in June 1981, never running with their PTE fleet numbers.

Deregulation, privatisation, vehicle sales and new companies

At this point it is helpful to provide a context for the post-PTE owners of LUT vehicles that remained in service in October 1986 and to explain the acronyms GMB, KBSL, GMBN, and GMBS. A more detailed explanation of the corporate changes is on pages 16 and 17.

GMPT

LUT became a wholly owned subsidiary of the Greater Manchester PTE ("PTE") on 1 January 1976. It remained thus until 1 April 1981 when LUT's operations and fleet, including withdrawn vehicles, were absorbed into the PTE's fleet (">PTE" indicates this in the lists). In 1984/85 the PTE had a policy that each bus sold was made unfit for further service and thus could not be used in competition against it.

GMB

On deregulation on 26 October 1986 the PTE's operations and part of its fleet were transferred to a new company, Greater Manchester Buses Ltd ("GMB"), which had been registered in February 1986. The former LUT vehicles retained their current PTE numbers with GMB,

KBSL

Not all the surviving LUT vehicles passed to GMB; several hundred of the PTE's fleet were not required by GMB and they were retained by the PTE. Anticipating this, in July 1986 the PTE (not GMB) set up a joint venture, Kirkby Bus Sales and Leasing Ltd ("KBSL"), with Kirkby Central Ltd (which at the time also owned coachbuilder Plaxton) to dispose of them - inter alia minimising the lease termination costs to the PTE. Although in 1984/85 the PTE had had a policy of making a vehicle unusable for further service before sale, this was no longer viable and there was no restriction on the sale of the surplus vehicles - and many reappeared on services which competed with GMB. Whilst awaiting a new owner or sales, the KBSL vehicles often remained on the PTE's or GMB's premises, the closed Birchfields Road garage was used for this.

It is not strictly accurate to show vehicles as "sold" by the PTE - they were transferred to the joint venture. In many cases the new owner did not actually buy the vehicle but either assumed the PTE's existing lease or arranged a new one. Which Kirkby Group company handled the onward sale to a new one could vary - for example, some former GMT (not LUT) vehicles which went to London Transport in 1987 were supplied by Plaxton Coach Sales Ltd.

GMBN, GMBS

After considerable argument and intense local political resistance and delaying tactics, the government forced Greater Manchester Buses Ltd to be split into Greater Manchester Buses North Ltd ("GMBN") and Greater Manchester Buses South Ltd ("GMBS") and sold to the highest bidder. The former LUT operating area became part of the North company. The two new companies became operational on 13 December 1993 but argument over their sale continued. Eventually at midnight on 31 March 1994 (effectively 1 April) both new companies were sold to their existing employees and management. Viewed by some as contrived deals, neither lasted long.

A new radio control system had been introduced in October 1992 which was unable to handle fleet numbers above 7999 and one consequence of this was that the remaining former LUT Fleetlines numbered in the 69xx series were renumbered into the 49xx series by changing the initial digit from a 6 to a 4. This was effective 10/92 although the change of the fleet numbers on the outside of vehicles took some weeks.

Stagecoach and First Group

GMBS was bought by Stagecoach (sale date 27 February 1996, date of transfer 18 March) and became Stagecoach Manchester; vehicles were repainted into group livery. GMBN was bought by FirstBus (sale date 25 March 1996, date of transfer 1 April) and GMBN then traded as First Greater Manchester using a tomato red livery. In May 1998 it was renamed First Manchester Ltd still using the tomato livery, subsequently adopting the First Group corporate lilac, grey and magenta livery. The former LUT vehicles retained their existing fleet numbers.

Where a former LUT vehicle is shown as passing to First or Stagecoach, the date is the date of transfer given above and not the date of change of company name.

*The liveries of the new companies:
 GMBN 4975
 GMBN 3272
 Stagecoach 4503

1975

○ after fleet number = nearby picture
 >PTE = transferred to GMPTE on 1 April 1981
 wdn = withdrawn from service

Industrial unrest in the country and delays in Fleetline deliveries affected both the PTE and LUT. In 1975 the only new vehicles were the five Leopard buses originally ordered as coaches. Fleet numbers 428-430 were initially allocated for three more 10m PSU4 and 433-434 to two more 11m Leopard coaches to be delivered in 1975. The 1975 order was then changed to one for buses, which arrived in August 1975 and were numbered 430-434, the existing 431-432 (XTB 748-9N) being renumbered 428-429 in June 1975.

GMB = Greater Manchester Buses Ltd, GMBN = Greater Manchester Buses North Ltd, GMBS = Greater Manchester Buses South Ltd. Dates of formation etc of the above and of the acquisitions by First Group and the Stagecoach are on page 162.

430-431

Chassis: Leyland "Leopard" PSU3C/4R
Engine: Leyland O.680 11.3-litre 6-cylinder diesel
Body make: Plaxton, BET-style, composite frame
Body type: B44D + 20 standing, 11m long

Initially ordered as coaches to be delivered in 1975 and numbered 433-434. The order was changed to one for two buses, numbered 430-431.

PTE coaches on loan 1/11/75 to 30/11/76

In 1975 the PTE experimented with the use of coaches on longer limited stop services using six ECW-bodied Leyland Leopards (86-91) which had been delivered in August and September but held in store, pending the start of the experiment. They were licensed 1/11/75 and sent on loan to LUT for use on the LUT-operated 32 (Manchester-Wigan) and 39 (Manchester-Liverpool) services.

Coaches proved not entirely suitable for the task and all were taken out of service for a time after a fatal accident to a crew member; they were also out of service for a further period whilst the rear of the body was strengthened, it having been designed for rear-engined chassis.

The experiment ceased at the end of November 1976. The coaches were returned to the Coaching Unit at Charles Street, Stockport and then transferred to other garages - 88/9/90 to Northenden, Northenden and Leigh respectively on 1/12/76; 86/7 to Bury and Oldham 1/3/77; 91 remaining with the coaching unit.

PTE vehicles on loan, 11/76 to 2/77

To cover vehicle shortages caused by the high level of recertification work on LUT's Seddon RU fleet, in November 1976 twelve double deckers were borrowed from the PTE. Used at LUT's Swinton garage, all were returned to the PTE by mid-February 1977

1977

⊙ after fleet number = nearby picture
 >PTE = transferred to GMPTE on 1 April 1981
 wdn = withdrawn from service

The 1977 deliveries were in accordance with the PTE's policy - Leyland National single-deck buses, Leyland coaches and standard Northern Counties 9.5m double-deckers. The coaches were delivered in the LUT version of the PTE's coach livery. The Nationals were finished in London Transport red - the only red available from the inflexible Workington factory; as a matter of interest, the PTE had those ordered for its own fleet finished in white, sending them to Northern Counties to add the orange paint and various PTE-specified items, such as the cab door.

When the LUT fleet was merged into the PTE fleet in 1981, the Nationals were renumbered into the PTE's National fleet number series and the coaches into the coaching unit series. By 1981 fleet numbers 8001-8020 had been used for PTE standard double-deckers and the Fleetlines were renumbered 6901 upwards, just below the PTE "Standards" series which had started at 7001. Those that went on to GMB retained their PTE fleet numbers.

1978/79

⊙ after fleet number = nearby picture
>PTE = transferred to GMPTE on 1 April 1981
wdn = withdrawn from service

Leyland's production of Fleetlines remained slow and patchy and the Marshall-bodied Leopards 204-210 and some Guy Arabs had to remain in service to cover for the delay. 505-514 were finished in LUT red and grey, the Nationals were again in London Transport red and the coaches again in the LUT white/red/yellow version of the Charterplan livery. 515-529 were delivered in the LUT-style of PTE orange and white.

When the fleet was merged into that of the PTE, the Nationals were renumbered into the PTE's "National" fleet number series and the coaches likewise into the PTE's coaching unit series. By 1981 fleet numbers 8001-8150 had been used for PTE Fleetlines and the LUT standard Fleetlines were renumbered 6901 upwards, just below the PTE "Standards" series which had started at 7001. Those that went on to GMB retained their PTE fleet numbers, the few surviving in October 1992 being moved into the 49xx series due to the new radio control system.

1979

⊙ after fleet number = nearby picture
 >PTE = transferred to GMPTE on 1 April 1981
 wdn = withdrawn from service

A further 23 Nationals were purchased, being available on short delivery. Finished in white ex-factory, they were sent to Northern Counties to be painted into the orange fleet livery and fitted with communications radios and the PTE's standard cab door. As with 1978, Fleetline deliveries continued to be slow and were allocated across the PTE fleet according to need, LUT receiving a single one and then ten more.

Abbreviations. Dates of formation etc of Greater Manchester Buses Ltd ("GMB"), Greater Manchester Buses North Ltd ("GMBN") and Greater Manchester Buses South Ltd ("GMBS"), First Group and the Stagecoach group are on page 162.

⊙ after fleet number = nearby picture
 >PTE = transferred to GMPTE on 1 April 1981
 wdn = withdrawn from service

The final new vehicles for the LUT fleet were the last of the Standard Fleetlines and three Volvo coaches. In addition, the need to speed up the introduction of one-person double-decker operation led to the purchase of 20 former London Transport Daimler Fleetlines.

With the merging of the LUT fleet into the PTE fleet, the new Fleetlines were renumbered into the 69xx series used for the other PTE-Standard Fleetlines from the LUT fleet. Those that passed to GMB retained their fleet numbers, any surviving in October 1992 being moved into the 49xx series due to GMB's introduction of a new vehicle radio system, which could not accommodate fleet numbers above 7999, the surviving PTE Standards in the 8xxx series also being moved to the 4xxx block; it took some time for the numbers on individual vehicles to be changed. The ex-London vehicles were renumbered by adding 2000 to their existing numbers. The coaches were renumbered into the PTE's Coaching Unit series.

Abbreviations. Dates of formation etc of Greater Manchester Buses Ltd ("GMB"), Greater Manchester Buses North Ltd ("GMBN") and Greater Manchester Buses South Ltd ("GMBN"), First Group and the Stagecoach group are on page 162.

Acquired to accelerate the introduction of one-person operation

The initial plan was to overhaul some former Manchester Fleetlines and transfer them to LUT. In January 1980 14 of the last batch of former-Manchester "non Mancunian" Metro Cammell-bodied Daimler Fleetlines new in 1965/66, fleet numbers 4731/34/36/37/40-45/49/50/52/59, (4737 \odot) were placed in store at Birchfields Road garage ready for this work and in February 4731 was taken into the Atherton workshops for assessment.

The cost of the overhaul was then compared with buying "off the shelf" some former London Transport Fleetlines, new in 1973, from Essex dealer Ensign, modifying them to single door, increasing the seating capacity, altering them from automatic to semi automatic gearbox control and fitting the PTE's standard "Manchester" style indicator boxes at the front. The cost of buying and altering the ex-London buses was much less than overhauling the Manchesters.

An initial order for seven was placed in March, increased to 14 in April plus a further six in May. The contract provided for Ensign to remove the central door, alter them from dual door 44/24-seat to single door 44/27-seaters, convert them from automatic gearbox control to semi automatic and paint them orange and white. The PTE-pattern front indicators were fitted by LUT at Atherton, being taken from withdrawn vehicles. Cost and availability caused the 14 first to be Leyland-engined - the first such Fleetlines in the PTE's fleet. They were numbered into the gap left by the withdrawn Bristol LHs.

318-331

Acquired from: Ensign Bus, Grays, formerly London Transport vehicles
Chassis: Daimler "Fleetline" CRL6
Engine: Leyland O.680 11.3-litre 6-cylinder diesel

Preparations for the merger of the fleet into that of GMPTE on 1 April 1981

LUT's spare vehicles level was somewhat higher than that of the PTE. This was adjusted at the end of December 1980 when 34 LUT vehicles were withdrawn to bring the LUT spare vehicle level down to that of the PTE:-

Guy Arab	161/62/64/69, 187-190, 235
Daimler Fleetline	173/75
Bristol RE	294/6-313
Seddon RU	342/43/49/50

350 was shortly reinstated to replace the damaged 372
342 was later put back into service by the PTE, renumbered 354

Withdrawn and stored in the yard at Atherton. Left: 173, 189, 175. Right: 311

Taken into the PTE fleet, 1 April 1981

When the LUT fleet was absorbed into that of the PTE, the Lancashire United company name was used for the PTE's travel agency - Lancashire United Travel. In this August 1982 picture, the former LUT 602, by then renumbered 6979 in the PTE fleet but still based at Atherton, carries an advertisement for the travel agency.

SOUTH LANCASHIRE TRAMWAYS

SOUTH LANCASHIRE TRANSPORT

The background to the formation of SLT, as it was usually known, is described in the Introduction to the main section of this book. The history of the tramways is complex and is well covered in several detailed books and a brief outline will suffice here.

In 1897, the St. Helens & District Tramways Co Ltd, which worked the tramways in and around St. Helens, sold out to St. Helens Corporation, which electrified the system, previously worked by steam or horses, and then leased it to newly-formed The New St. Helens & District Tramways Co Ltd, registered on 4 November 1898, with offices at St. Johns Lane, Liverpool. At the same time the Lancashire Light Railways Co Ltd was formed to build a line some three miles long joining the St. Helens system at Prescott to the Liverpool system at Knotty Ash. It was opened in June 1902. The promoters of both were the Atherton brothers.

Their next venture was based in the town of Atherton, located in the centre of several similar towns that had no tramways. The South Lancashire Tramways Co ("SLT") was registered on 6th August 1900 - its title never included the word Limited - and obtained an Act of Parliament to build 62.25 miles of track, with further Acts authorising a further 13.5 miles - only 30.7 miles were built. The South Lancashire Electric Supply Co Ltd was registered on 29 June 1900 to generate and supply the power and yet another company, the South Lancashire Electric Traction and Power Co Ltd ("SLETP"), was formed on 29th November to take over powers granted in 1896 for lines between St. Helens, Leigh and Bolton. Based at Howe Bridge, Atherton, it became the parent of the group.

A line from Lowton - Leigh - Atherton - Four Lane Ends opened on 20 October 1902 connecting with Bolton's system at Four Lane Ends. A few days later the line from Atherton to Tyldesley, including a branch to Bag Lane, Atherton, followed and next year a line from Atherton via Hindley to Haydock connecting there with the line to St. Helens. In 1905 the line to Tyldesley was extended via Mosley Common to Boothstown.

Before this, however, the Athertons were in financial trouble. Subsidence due to coal mining greatly increased the cost of track work, money ran out, the Athertons departed and in July 1904 the South Lancashire Electric Power and Traction Co went into receivership.

Registered at the end of December 1905, a new company, Lancashire United Tramways Ltd, acquired the assets of SLETP, including the tramways, trams and power station at Howe Bridge.

In 1906 an extension to Lowton St Mary's Station was opened and then a line from Walkden to meet the Farnworth UDC tramways at Brookhouse. This was soon followed by the extension of the line from Boothstown to Worsley, Swinton and Walkden. A branch from Worsley to join the Salford system at Winton opened briefly in 1907. This was worked by SLT but was short-lived owing to a dispute with Eccles, which owned the section into Winton; the line fell into disuse until matters were resolved in 1912-13 after which a service of Salford cars ran as far as Worsley. In 1909 SLT cars from Lowton St Mary's to Four Lane Ends began to run through to Bolton, although Bolton's cars only worked from Bolton to Four Lane Ends.

There were some complex dealings with Farnworth Urban District Council, which owned some 3 miles of tramway, operation of which leased to a company, then to Bolton and finally in 1902 bought eight large bogie cars and operated the service itself. SLT leased the Farnworth system in 1906 along with the adjacent Kearsley's 1.82 miles of track to the Clifton boundary at Unity Brook. The extension beyond here ("The Clifton Light Railway") through Clifton (a detached part of Barton-on-Irwell UDC) was opened in 1907 and ran for 1.4 miles to Newtown, ending 200 yards short of the Salford tracks at Pendlebury - the gap was connected in 1928. In 1927 when the lease of the Farnworth system was renewed, it was decided to sub-let the lease to Bolton. A further service, this time jointly operated, was then introduced by both operators, from Bolton to Farnworth. These two routes, with similar arrangements, remained after conversion to buses.

The Haydock meeting point with the St Helens tram service was changed to Ashton-in-Makerfield from November 1909. This continued after the municipalisation of the St Helens system (in October 1919) until June 1928 when it was replaced by a joint service of SLT and Corporation trams between Ashton and St Helens. When SLT trolleybuses were introduced east of Ashton in August 1930, the Corporation's trams worked St Helens - Haydock - Ashton until the complete route was converted to trolleybuses in June 1931.

In 1913 the last major addition was opened from Walkden via Little Hulton to Buckley Lane, there meeting the Farnworth lines. From December 1915 the through service from Leigh to Bolton was discontinued and was not restored until January 1927. From May 1926 SLT cars operated a Walkden - Swinton - Manchester (Deansgate) service jointly with Salford Corporation.

The SLT system was unusual with long, almost straggly, routes, which had stretches of relatively undeveloped areas between the busy small towns and its generally industrial landscape of mining. It proved increasingly costly to operate as traffic grew - many sections on the line were single track and some streets could not accommodate double tracks. Of greater concern was the effect on tracks and overhead of subsidence from coal mining. Such was the investment in the power station and associated distribution network that in 1922 SLT began to consider conversion to trolleybuses. Although it was decided that existing trackless trolleybuses were insufficiently developed, over the next five years it became clear that something had to be done to replace the trams. The first steps were taken in 1926 when the parent company's name was changed to the Lancashire United Transport & Power Company Ltd. Extra finance was then raised for the conversion to trolleybuses.

A further stimulus was the growing competition from motor buses. There was a developing network of jointly operated express bus services in the region and a growing threat from Bolton-based and well-funded J R Tognarelli - covered in the motor bus part of this book.

In 1928 the decision was taken to convert to trolleybuses. SLT being a statutory company established by Act of Parliament, this needed a further Act. The South Lancashire Transport Act of May 10th 1929 changed the name of the company to the South Lancashire Transport Co (still without the word Limited in its title) and authorised conversion to trolleybuses, including the sections in Farnworth, Kearsley and Clifton but not that from the centre of Leigh to Lowton. It also allowed the company to operate motor buses within a fifteen mile radius of Leigh Town Hall, except in Stretford, Trafford Park (where Lancashire United Transport already worked, together with Salford and Manchester), and any part of Cheshire.

Things then moved swiftly. Platt Bridge (Hindley) depot was wired to accept trolleybuses in addition to tramcars, followed by Swinton, and orders were placed with Guy Motors and Roe for two- and three-axle vehicles. The bodies were low bridge, with side gangways on the upper deck because of low bridges on the St Helens service at Dangerous

Corner, and on the Farnworth service at Worsley and Cleggs Lane, Little Hulton. Oddly, top-covered tramcars had been able to negotiate all of these.

The first conversion took place on 3 August 1930 with the section of the St. Helens route between Atherton and Ashton-in-Makerfield. The rest of the St Helens route followed on 21 June 1931, St. Helens having converted its section, giving a 13.9 mile route from Atherton, through Hindley, Ashton in Makerfield and Haydock to St Helens, and jointly operated by SLT and St Helens Corporation. This was notable for its continued use of what was later named Templeton Road, Platt Bridge - a 400-yard section of part sett-paved former tramway track (the tram track was left in place) which became an increasingly rough and pot-holed "trolleybus only" private road unadopted by the local council. The original cause of its use by SLT from 1903 was to avoid conflict with Wigan Corporation's then 3ft 6in-gauge line, which used the adjacent road. It continued after Wigan's line was converted to standard gauge in 1904 as SLT had no running powers over that road. The much-visited curiosity continued in use throughout the life of the system, somewhat to the irritation of the local householders.

A couple of months later, on 19 August, the Atherton - Tyldesley - Mosley Common - Boothstown - Worsley - Swinton and the Worsley - Swinton - Walkden - Little Hulton - Farnworth routes were converted. These were linked as one long U-shaped route, the journey time being one hour and twelve minutes. Although vehicles worked through the service was effectively still divided and passengers had to rebook at Swinton where there was always a four minute wait (for no good reason). The actual route was 14.5 miles long but the two termini were only some 5 miles apart in a direct line - LUT motor buses provided a direct service. In 1932 the route in Farnworth was diverted to operate into Farnworth via Longcauseway and out via Brackley Street - this required yet another Act of Parliament.

The final conversion was the Lowton - Leigh - Atherton - Over Hulton - Four Lane Ends - Bolton route. SLT's last tram was driven from Leigh to Atherton depot by Managing Director, E H Edwards on the night of 16 December 1933. SLT trolleybuses ran from Leigh, where LUT had a small bus station at Spinning Jenny Street, to Bolton; the Leigh to Lowton St Mary's section became a joint LUT - Leigh Corporation motor bus service, extended to Lane Head. The tram shed at Atherton was converted for trolleybus use, the conversion including a traverser and turntable at the closed end of the shed to allow vehicles to be turned and moved from lane to lane.

The trams on the remaining services were replaced by LUT motor buses; the Farnworth - Clifton service was extended to Swinton and onwards to Glazebrook, via Monton, Patricroft and Irlam. Eight bogie cars (of which six had been new to Farnworth) passed to Bolton Corporation for use on the Farnworth and Walkden routes - then operated by Bolton until converted to motor buses on 12 November 1944. They were then replaced by a joint service to Walkden, and a purely local one to Farnworth, which Bolton operated in lieu of workings on the Leigh route.

Alongside the Leigh trolleybus service, Bolton's trams continued to operate from Four Lane Ends to Bolton until 29 March 1936 when that service was converted to trolleybuses - but in a strange way. Unsure whether it wished to operate trolleybuses, Bolton arranged for SLT to operate the service and the short workings to Hulton Lane on its behalf. SLT bought four Roe-bodied Leyland three-axle highbridge trolleybuses (48-51) to its own specification, on which Bolton paid the interest and depreciation charges and after eight years they became Bolton's property. What was odd was that there was nothing on the vehicle to show this - they were in SLT livery, worked by SLT crews, had South Lancashire Transport as legal owner, were kept and maintained and overhauled at Howe Bridge depot Atherton. The overhead in Bolton's operating area (the boundary was the junction with the A6 road), however, was Bolton's property and responsibility and the corporation had a fully equipped overhead line lorry to service it.

In the early days numbers 48-51 were used on the Bolton services but the Hulton Lane service was soon worked with other three-axle trolleybuses from the SLT fleet and 48-51 were then used on other SLT services except Atherton - St Helens and Atherton - Farnworth, which had low bridges. In later years the four could often be found on the service from Mosley Common to Leigh, which operated alongside the Atherton - Swinton service, providing a more frequent service over the busy section from Leigh to the colliery at Mosley Common.

In contrast to the vehicles, which were bought to a high specification, the overhead was constructed with due regard to economy. Use of turnouts and frogs was kept to the minimum and, apart from termini (and not always then), turning triangles and the like were not connected to the main running lines and crews had to move the trolley booms from one set of wires to the other when turning. Rather than being clamped, span wires were often simply tied off to the poles. The fleet did not have traction batteries or, other than the post-war vehicles, lighting batteries and when the booms came off the

traction-voltage lighting went out. On long sections the vehicles' lights would dim due to voltage drop. Where a bus had to turn or manoeuvre where there was no turning wiring, an SLT crew would arrive with two sets of bamboo poles wired with and joined by heavy cables. One set would be attached to the running wires and the other to the skates on the trolley booms and, thus powered, the bus would be moved or turned, the support crew, suitably equipped with heavy rubber gloves and boots, moving the connecting cables as needed. None of the pre-war vehicles had an upper-deck emergency exit - trolleybuses not being subject to the motor bus Construction Regulations.

The original overhead running wires were spaced at 18in rather than the standard 24in. Over the years some were altered to 24in but a mix of the two remained, sometimes with wires in opposite directions on a road having different spacing. Tramway hangers were reused and the SLT sections (but not Bolton) had earth return rather than an insulated earth. Simple it all may have been but it worked reliably, carried thousands of passengers every day - and made good profits.

After the war authority was obtained to extend the trolleybuses from Farnworth to Moses Gate, and from there along the direct road back to Walkden (in addition to the existing route via Little Hulton). No steps were actually taken to implement this, for the economics of the system had changed. With the nationalisation of the electricity industry in 1948, the generating station at Atherton remained with SLT but its power had to be supplied to Central Electricity Generating Board and SLT had to buy electrical energy from that body - at a higher cost than generating power itself.

The colliery railway branch that included the low bridge at Dangerous Corner was dismantled in 1953 but the service continued to be worked by lowbridge vehicles. It was found that the one at Worsley, again on a branch of the colliery system, was high enough to take a highbridge vehicle at very low speed in the centre of the road and towards the end of operation when there were insufficient lowbridge trolleybuses to work the service, the occasional highbridge trolleybus was used.

By 1955 and with a new general manager, most of the equipment was urgently in need of renewal, and it was decided to convert the SLT system to motor buses. This raised an issue with Leigh Corporation concerning the Leigh to Bolton service, Leigh taking the view that earlier agreements had established its right to a share in the service. LUT considered that Leigh had no such entitlement as it had never operated trams and the Bolton service had been a part of the tramway system. A bitter battle

ensued, with LUT stating at one point that it would continue to run the trolleybuses indefinitely. After due mediation in the traffic courts agreement was reached whereby Leigh would provide one vehicle on the service and in return would grant LUT concessions in respect of bus stops within Leigh.

SLT was a statutory company and its winding up and abandonment of the trolleybuses required a further Act of Parliament. This proved troublesome because of demands by local authorities which would have to take over SLT's statutory responsibilities such as a bridge maintenance and street lighting. The first trolleybus service to be abandoned, on 25 March 1956, was that between Bolton, Hulton Lane and Four Lane Ends which was thereafter operated by Bolton Corporation motor buses. Trolleybuses 48-51 were taken to Bolton's Bridgeman Street garage; the Corporation then sold them for scrap to Birds of Stratford-on-Avon. On 12 November 1956 the joint St Helens to Atherton trolleybus service was replaced by LUT and St Helens motor buses. At the time there was a war situation in the Middle East, known as the Suez Crisis, which affected the country's fuel supplies and caused fuel rationing. As a result the overhead was left *in situ* and the trolleybuses rendered surplus held back from disposal in case of need to reinstate the service. They were not needed; the emergency passed after a few months.

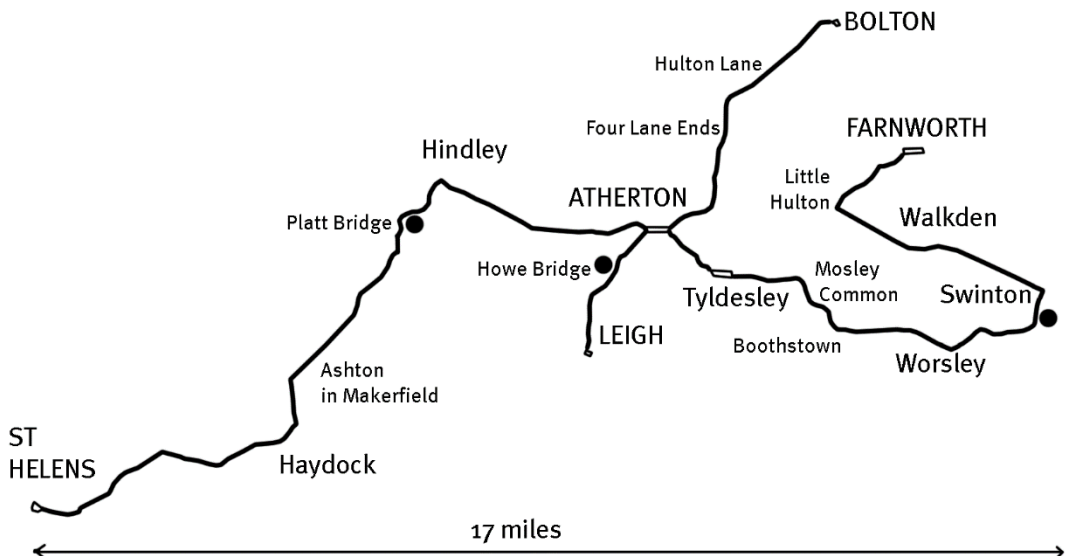

SLT had a considerable cash reserve and it was decided to use this for motor bus purchases on behalf of LUT. Thus, 46 motor buses were ordered by LUT but paid for and initially owned by SLT. Numbered 542-563, 570-593 in the LUT fleet and delivered in 1955/56/57, they carried SLT's name

as legal owner but had the Lancashire United fleetname. They were not restricted to working SLT services, although 570-581 batch were initially used on the former trolleybus service to St Helens. All were later transferred to LUT ownership.

In the final months, as the number of trolleybuses available for service declined, LUT-owned motor buses were sometimes substituted, showing 'TT' (Trackless Trolley) on their destination blinds and carrying 'On hire to SLT' stickers. The Act of Parliament provided for SLT to be wound up at midnight on August 31st 1958 and on that day the final three routes - Leigh - Bolton, Leigh - Mosley Common and Atherton - Swinton - Farnworth were converted to motor bus operation, Leigh duly providing its bus on the Bolton service on and after 1st September. The last service trolleybus worked into Swinton depot just after 11.41 pm on 31 August 1958. At midnight South Lancashire Transport ceased to exist and at 12.40am the final SLT trolleybus, 28, arrived at Atherton from Swinton depot - running on Lancashire United Transport's trade plates. Next day, a luncheon was held to mark the occasion, and a journey over a section of the route was arranged for the directors, local civic dignitaries and long-service crews. For this purpose, suitably inscribed trolleybus 71 was used, as SLT was no longer in existence it was licensed and insured by Lancashire United Transport, whose name it carried as legal owner. Howe Bridge trolleybus depot was converted into LUT's central workshops; the turntable and traverser were removed.

Depots and livery

Described in the LUT Introduction.

TRAMCARS

⓪ after fleet number = nearby picture

1901

Not numbered

Truck: not known
Motors: not known
Body maker: G F Milnes, Hadley Castle
Seating: 20, single deck

The car was built in 1897 for the Simplex Syndicate of London to demonstrate the conduit power supply system it had developed. It ran on a short length of track having been installed at the Prescott Cable Works of the British Insulated Wire Co Ltd.

By 1901 the car was out of use and in October of that year the 1901 South Lancashire Electric Traction and Power Co Ltd bought it (on behalf of SLT) from the British Insulated Wire Co for £300 and despatched it to Milnes to be rebuilt for overhead trolley power collection, paying Milnes £75 in July 1902 for the job.

The car was delivered to Atherton but was not numbered and never licensed for service use, although it was included in the Board of Trade returns until 1905. Timetables of 1905 advertised a "Special Private Car", carrying 20 passengers and painted white, which could be hired for weddings, funerals, outings and the like.

It left the fleet in 1906, and appears to have been taken by the Atherton Brothers when they left; it may well have been sent by them to one of the systems overseas with which they became involved.

1902/03

1-45

The order was for 50 cars of which the first five went to The Lancashire Light Railways Co Ltd for working the Liverpool & Prescott Light Railway; they eventually were transferred to SLT, becoming fleet numbers 83-87 (q.v.). The 45 SLT cars were delivered in two batches - 30 in 1902 and 15 in 1903.

Cars: supplied complete by G F Milnes, Hadley Castle
Truck: Busch Waggon and Maschinenfabrik A.G., Germany (supplied through Milnes)
single four-wheel truck, 6ft wheelbase, girder frame,
Motors: Societe Anonyme Electricite et Hydraulique, Charleroi, Belgium, 2 x 25hp (supplied by Witting Bros Ltd)
Body maker: Milnes
Seating: 33/22 open top, double deck

Note that Milnes Voss, Birkenhead, was a separate firm from G F Milnes & Co.

1-30 delivered 5/02 to 8/02, some used 9/02 for tests and inspection. Service started 20/10/02.

Long term loan of SLT cars to the New St Helens Co

From 11/09 the Haydock "meeting point" of the New St Helens Co and SLT (Atherton) routes was moved to Ashton-in-Makerfield and three SLT cars from this batch were transferred on long-term loan to the New St Helens company to provide stock for this change.

After a complaint from St Helens Corporation, the three cars on loan were numbered in the New St Helens fleet and repainted in the New St Helens livery, which was a darker shade of red than that of SLT.

The three cars were exchanged at times for overhaul etc, the new loan car taking the number of the one returned for overhaul or whatever. Thus:

New St Helens 44 was (in turn) SLT 24, 13 and 10
New St Helens 45 was (in turn) SLT 25, 29 and 22
New St Helens 46 was (in turn) SLT 26, 28, 33 and 40

Precise dates are given in the car list.

SLT 22 and 40 were still running with the New St Helens company (as their 45/6) when St Helens Corporation took over on 1 October 1919, and were possibly among a few hired to the latter for a time along with some ex-Lancashire Light Railways cars.

Also, SLT numbers 20, 36/9 were on short-term loan to the New St Helens company for periods between 1911 and 1913 (precise dates are shown in the list). They were not repainted or renumbered and kept their SLT identities, being referred to by St Helens Corporation as "South Lancashire duplicate cars". There may well have been others on similar loan for shorter periods up to 1919.

Modifications:

Truck rebuilt to Brill 21E pattern - this had a 7ft 6in wheelbase and used side frames supplied by EEC in 1919 and placed in store until required. The dates in the list are the dates the modified car re-entered service.

UEC body frames - these were supplied as frames to SLT in 1917 which fitted and finished them at the next convenient overhaul, this took some time and by then the United Electric Car Co had become English Electric (EEC). The dates in the list are the dates they re-entered service.

EEC body frames - these were supplied by EEC in 1918 and 1921, and were stored until SLT had time to fit and finish them. The dates in the list are the dates they re-entered service.

UEC top covers - these were supplied to SLT, which fitted them. As with the previous new frames, they were done when convenient. The dates in the list are the dates they re-entered service.

|--|--|

On scrapping, several of the lower-deck bodies were sold for use as sheds.

1906

46-58

Acquired from Farnworth Urban District Council, 1/4/06

A tower wagon was also acquired, probably horse drawn

Cars: supplied complete by Westinghouse, Trafford Park

Truck: Brill 22E bogie

Motors: 2 x 25 hp Westinghouse

Body maker: G F Milnes (sub-contracted from Westinghouse)

Seating: 38/30 open top, quickly altered by SLT to 40/34
then to 52/34 on modification & rebuild

Modifications:

1921-22: Four cars (46, 49 and 56-57) rebuilt with EMB 'Burnley' bogies, EEC open-balcony top covers and staircases modified to normal - anti-clockwise rising through 180 degrees. Seating became 52/34. The bodies did not have new frames.

1923-25: Seven cars (47-48, 50, 53-55 and 58) rebuilt with EMB 'Burnley' bogies, bodies rebuilt using new EEC frames with open balcony top covers, supplied in 1923-24. The frames were fitted and the bodies completed by SLT at overhaul in 1923-25, staircases modified to 'normal' - anti-clockwise rising through 180 degrees, seating became 52/34.

1927-28: The above eleven cars were fitted with GEC WT32P 50hp motors.

The other two cars, 51-52, were not modified on overhaul and remained open-top.

Sale:

When the Bolton service ended on 16 December 1933 six cars were sold to Bolton; four more were stored into 1934 in the hope that Bolton might buy them also. Details are in the lists. Several of the lower-deck bodies were sold for use as sheds.

46	11/01: new to Farnworth (1) 1/4/06: acquired by SLT 4/22: rebuilt - EMB bogies; EEC balcony top-cover 7/27: GEC motor 12/33: withdrawn 1934: stored in case wanted by Bolton, then scrapped	1/4/06: acquired by SLT 12/23: rebuilt - EMB bogies, new EEC frame and balcony top cover 3/28: GEC motor 10/32: withdrawn (accident damage) & scrapped
47	11/01: new to Farnworth (2) 1/4/06: acquired by SLT 3/25: rebuilt - EMB bogies, new EEC frame and balcony top cover 12/27: GEC motor 12/33: withdrawn; sold to Bolton Corporation (33) 1/39: scrap	54 O 8/02: new to Farnworth (9) 1/4/06: acquired by SLT 12/24: rebuilt - EMB bogies, new EEC frame and balcony top cover 10/27: GEC motor 6/28-8/30: licensed to operate in St Helens (on joint service) 12/33: withdrawn; sold to Bolton Corporation (36 > 336) 5/46: scrap
48	11/01: new to Farnworth (3) 1/4/06: acquired by SLT 11/25: rebuilt - EMB bogies, new EEC frame and balcony top cover 2/28: GEC motor 12/33: withdrawn; sold to Bolton Corporation (34 > 334) 12/46: scrap	55 8/02: new to Farnworth (10) 1/4/06: acquired by SLT 8/25: rebuilt - EMB bogies, new EEC frame and balcony top cover 6/27: GEC motor 12/33: withdrawn; sold to Bolton Corporation (37 > 337) 11/46: scrap
49	11/01: new to Farnworth (4) 1/4/06: acquired by SLT 8/22: rebuilt - EMB bogies; EEC balcony top-cover 1/27: GEC motor 12/33: withdrawn 1934: stored in case wanted by Bolton, then scrapped	56 8/02: new to Farnworth (11) 1/4/06: acquired by SLT 12/22: rebuilt - EMB bogies; EEC balcony top-cover 4/27: GEC motor 12/33: withdrawn 1934: stored in case wanted by Bolton, then scrapped

51	1/02: new to Farnworth (6) 1/4/06: acquired by SLT not modified on overhaul 8/30: withdrawn & scrap	58 8/02: new to Farnworth (13) 1/4/06: acquired by SLT 10/24: rebuilt - EMB bogies, new EEC frame and balcony top cover 4/28: GEC motor 6/28-8/30: licensed to operate in St Helens (on joint service) 12/33: withdrawn; sold to Bolton Corporation (38) 1/39: scrap
52	1/02: new to Farnworth (7) 1/4/06: acquired by SLT not modified on overhaul 8/30: withdrawn & scrap	
53	1/02: new to Farnworth (8)	

59-82

Cars: Supplied complete by British Thomson-Houston ("BTH")
Truck: Brush single truck built to Brill 21E design
Motors: 2 x 20 hp BTH
Body maker: 59-72: Brush (sub contracted by BTH)
 73-82: United Electric Car Co
 (sub contracted by BTH)
Seating: 36/22, with "Bellamy" top cover

Modifications:

1915: 78 - body rebuilt by SLT and short top replaced by UEC full-length balcony top cover.
 1915/16: 73/4 and 82 - rebuilt by UEC with new body frames, their short tops were replaced by full-length balcony top covers.
 1916-17: 61/8/9 - short tops replaced by UEC full-length balcony top covers.
 1917-21: 62/3/7, 70/5/7, 80/1 - rebuilt by SLT using new UEC body frames, the short tops were replaced by full-length balcony top covers. The frames were supplied by UEC in 1917 and stored by SLT until used.
 1922-25: short top covers on 59, 60/4/5, 71/6/9 were replaced by EEC full-length balcony top covers.
 66 and 72 were not modified when overhauled.

59	9/06: into service 8/25: EEC balcony top cover 8/31: withdrawn & scrapped	69	9/06: into service 1/17: UEC balcony top cover 8/31: withdrawn & scrapped

On scrapping, several of the lower-deck bodies were sold for use as sheds

1919

83-87

83-87 were the balance of the 1902 SLT order for 50 cars.

When new they were owned by The Lancashire Light Railways Co Ltd "Liverpool & Prescott Light Railway" (LLR) but were operated on its behalf by The New St Helens & District Tramways Company Ltd, in whose fleet they were 37-41. The five cars were complete in March 1902 and then stored to await the Official Inspection of the Liverpool & Prescott Light Railway (LPLR) in April, which was then delayed, opening to public traffic in June.

From c1908 some of the larger New St Helens bogie cars were used on the LLR line instead of 37-41, which were then used on New St Helens, services - principally that to Prescott via Rainhill. However they remained LLR property until transfer to SLT when St Helens Corporation took over in October 1919, the LPLR line was sold to Liverpool Corporation at the same time.

Acquired from: Liverpool & Prescott Light Railway (Lancashire Light Railways Co Ltd), 1/10/19
Cars: supplied complete by G F Milnes, Hadley Castle
Truck: Busch Waggon and Maschinenfabrik A.G., Germany
single four-wheel truck, 6ft wheelbase, girder frame,
Motors: Societe Anonyme Electricite et Hydraulique, Charleroi, Belgium, 2 x 25hp (agent: Witting Bros Ltd)
Body maker: Milnes
Seating: 33/22 open top, double deck
Modifications: c1921: 85, 87 - truck rebuilt to Brill 21E-type 7ft 6in wheelbase, using frames supplied by EEC
It is probable that only 85/7 was repainted in SLT livery.

83	3/02:	completed		c -/21:	truck modified to Brill 21E-type	
	6/02:	into service owned by LLR, fleet number 37		by5/22:	in service at SLT	
	1/10/19:	acquired by SLT, fleet number 83		8/30:	withdrawn and scrapped	
	10/19- -/20:	likely ran on hire to St Helens Corporation		86	3/02:	completed
	by 4/21:	in service at SLT			6/02:	into service owned by LLR, fleet number 40
	-/21:	withdrawn and stored, extant 1927		1/10/19:	acquired by SLT, fleet number 86	
	by -/31:	scrapped		10/19- -/20:	likely ran on hire to St Helens Corporation	
84	3/02:	completed		-/21:	withdrawn (probably on return from St Helens)	
	6/02:	into service owned by LLR, fleet number 38		-/27:	still in store	
	1/10/19:	acquired by SLT, fleet number 84		by -/31:	scrapped	
	10/19- -/20:	likely ran on hire to St Helens Corporation	87	3/02:	completed	
	-/21:	withdrawn (probably on return from St Helens)		6/02:	into service owned by LLR, fleet number 41	
by -/27:	scrapped by SLT	1/10/19:		acquired by SLT, fleet number 87		
85	3/02:	completed		10/19- -/20:	likely ran on hire to St Helens Corporation	
	6/02:	into service owned by LLR, fleet number 39		c -/21:	truck modified to Brill 21E-type	
	1/10/19:	acquired by SLT, fleet number 85	by4/21:	in service at SLT		
	10/19- -/20:	likely ran on hire to St Helens Corporation	6/30:	withdrawn (damaged) and scrapped		

On scrapping, several of the lower-deck bodies were sold for use as sheds.

88-89

Acquired from: Liverpool & Prescot Light Railway (Lancashire Light Railways Co Ltd), 10/10/19
Cars: supplied complete by British Electric Car Co, Trafford Park
Truck: British Electric Car Co SB60 four wheel, single truck
Motors: Westinghouse 2 x 25hp
Body maker: British Electric Car Co
Seating: 33/22 open top double deck

These two cars had been built for Aberdeen Corporation as part of an order for 12. Four were delivered and found unsatisfactory; they were modified and accepted. Two more which were in work were left with the BEC and the rest of the order was cancelled. The two "in work" cars were then bought by the LLR, the purchase authorised on 14/7/02.

When new 88-89 were owned by The Lancashire Light Railways Co Ltd ("Liverpool & Prescot Light Railway") but were operated on its behalf by The New St Helens & District Tramways Company, in whose fleet they were 42-43. From c1908 some of the larger New St Helens bogie cars were used on the LLR line instead of 42-43, which were then used on New St Helens, services - principally that to Prescot via Rainhill. However they remained LLR property until transfer to SLT when St Helens Corporation took over in October 1919, the L&PLR line being sold to Liverpool Corporation on the same date.

- 88** 12/02: into service, owned by LLR, fleet number 42
 1/10/19: acquired by SLT, fleet number 88
 10/19- /20 possibly ran on hire to St Helens Corporation
 2/21: in service at SLT
 not modified
 -/24: withdrawn & stored
 -/27: extant
 by -/31: scrap
- 89** 12/02: into service, owned by LLR, fleet number 43
 1/10/19: acquired by SLT, fleet number 89
 not modified
 -/24: withdrawn & stored
 -/27: snowplough
 by -/31: scrap

On scrapping, the lower-deck bodies were probably sold for use as sheds.

1927

44-45

Through running between Leigh and Bolton had been stopped but recommenced in 1927. The through service was worked solely by SLT. Bolton insisted upon the use of top-covered bogie cars and would not allow use of SLT's two surviving open-top bogie cars or single truck cars. Having argued without success and taking account of the extra revenue, SLT reluctantly bought two new trams. They looked very much like SLT's existing fleet of rebuilt bogie cars, having open balconies and driving platforms - both of which were by then somewhat outdated.

Car: supplied by English Electric, Preston
Truck: EMB Co "Burnley" bogie
Motors: GEC 2 x 50 hp
Body maker: English Electric
Seating: 52/34 top covered
 45 (but not 44) had upholstered seating in the lower saloon using a foam rubber interior - an early use of the latter for seating in a public transport vehicle

Modifications: none

- 44** 7/27: into service
 12/33: withdrawn
 12/33: sold to Bolton Corporation (39 > 339)
 12/46: scrap
- 45** 7/27: into service
 12/33: withdrawn
 12/33: sold to Bolton Corporation (40 > 340)
 11/46: scrap

The newly-built generating station and depot at Howe Bridge, 1904.

Perhaps the most famous section of route was the private 400-yard length of unsurfaced former tramroad about half a mile south of Platt Bridge. Known as Templeton Road, it was unadopted. With the tram tracks and associated sett paving still in place, it became increasingly rough, potholed and either dusty or muddy - but it was in use to the end. Number 46 leaves Templeton Road bound for St Helens.

TROLLEYBUSES

In November 1929, quotations were obtained from "the only five firms making this class of vehicle"-

Guy Motors Ltd with Chas H Roe (1923) Ltd body	£1,961
Clough Smith & Co Ltd (Karrier chassis) with Chas H Roe (1923) Ltd Roe body	£2,004
English Electric Co Ltd, complete	£2,032
Ransomes Sims and Jefferies Ltd complete	£2,065
Richard Garrett & Sons Ltd with Chas H Roe (1923) Ltd body	£2,179

The order was placed with Guy and Roe as Guy Motors' standard product was the only one suitable for SLTs' requirements and also Guy appeared to have the largest number of such buses in service. The other firms would have to modify their products to meet SLT's specification. A three-year guarantee was negotiated on the chassis and electrical equipment, instead of the usual one year - it would prove to be a shrewd move by LUT but a costly one for the manufacturers.

1930

⊙ after fleet number = nearby picture

1-10

Chassis:	Guy BTX 3-axle
Motors:	Rees-Roturbo 60 hp These proved underpowered and their standard of workmanship "unsatisfactory". All were subsequently replaced with 90hp Metropolitan Vickers motors. An explanatory note follows the vehicle details for this batch.
Control equipment:	Electric Construction Co regenerative
Body maker:	Roe, teak frame
Seating:	L29/31R lowbridge Altered to 25/31 seat during 1932 by reducing four rows of seats on the upper deck by one seat each, giving the LUT/SLT preferred layout of alternate rows of three and four in the side-gangway upper-deck. The seats were arranged (from the front) upper deck: 3,4,3,4,3,4,2,2; lower deck: 5 rearward facing on the bulkhead, then 4 rows of forward-facing seats (2x2) and longitudinal seats over the wheel arch for 5 each side. Individual vehicles varied over the years, with the 3- and 4-seat rows interchanged.
Rebuilding:	The bodies were rebuilt several times - a description is given immediately after the vehicle details for this batch. Dates and other details are listed in the separate section that follows the vehicle list below.

St Helens service

When this started in June 1931, SLT trolleybuses that worked within St Helens had to have hackney licences from the St Helens Hackney Carriage Office; the St Helens licence number was painted on the lower nearside rear of the body.

Rebuilding

The dates are when the vehicle came back into service after body rebuild. It has not been possible to establish months of start, completion etc for the rebuilding with the precision achieved elsewhere in this book, due to a small batch of SLT ledgers and reports having been lost before the records were placed in the relevant archives. There is no significance in whether a rebuilt vehicle had a four or **eight**-leg trolley gantry. Those not shown getting a flat front panel in 1948-49 retained their original shaped panel until later rebuild or withdrawal.

|---|---|

Subsequent owners:

H Wallace was a motor dealer, probably with links to Cubbins.

2, 5, 9 sold to Cubbins 2/57; sale then delayed until 7/57 as contingency for possible use during the fuel shortages resulting from the Suez war. None were used.

Most of the vehicles sold to TPE in 8/58 were taken by TPE during the following month, the 8/58 sale date was to close SLT's accounts.

3, 8 TF 2074/79 Cubbins, scrap

6 TF 2077 scrap dealer, Brinksway, Stockport (used as store shed)

Myths:

The chassis number of 10 is incorrectly quoted elsewhere as 23558;

There are reports of some trolleybuses passing from Cubbins to Colbro. None did.

Motor changes, trolleybuses 1-46

It was early days for trolleybus technology when Rees Roturbo 60hp motors were chosen for the six-wheel BTXs 1-30; in service, 60hp proved too small. The shortfall was not a major problem on the relatively flat land of the Atherton, Leigh and St Helens areas but the Bolton service had a long continuous climb in both directions to Four Lane Ends and there the lack of power was exacerbated by a growing need for extra capacity. The four-wheel BTs (31-46) had 90hp Metropolitan Vickers ("MV") motors and therein lay the solution.

A successful pilot installation was done with BTX 21 in 1934 and progressively from 1935 the MV 90hp motors were taken from all 16 BTs and fitted to some of the BTXs, some, possibly all, of the BTs getting the 60hp Rees motors from the BTXs. 90hp BTXs were then used on the Bolton service and BTs 39-46 (and probably 38) were licensed for operation into St Helens, enabling many duties on that service to be run by four-wheel 60hp BTs. In 1937/38 fourteen new 90hp MV motors were bought and fitted to the remaining 14 BTXs. Second-hand BTX 47 was not involved - it had a GEC 70/75hp motor, which it retained.

Rees Roturbo went out of business in 1936, which probably contributed to the decision to fit all 16 BTs (31-46) with new GEC 80hp motors. Orders were placed with GEC for six in 1938 and ten more in 1940; outbreak of war delayed delivery of the latter and it appears to have been 1942 before the last was delivered and fitted. It is possible that those done in 1938 had their MV 90hp units removed and fitted to BTXs, the BTs getting new GEC motors and the Rees motors being discarded.

Number 6 with the flat front panel. The rear view of number 9 shows the absence of an upper-deck emergency door, the revised rear platform window fitted on rebuild and the St Helens licence number at the lower left of the rear panel.

Taken outside the garage, this line up shows the different steps in the piano-front of the BTXs (26 second from left and three others fourth, fifth and sixth) and the BTs (40, third from left). Second-hand ex-Guy demonstrator, 47, is on the left

Rebuilding of Roe bodies on trolleybuses 1-53

The teak-framed Roe bodies proved particularly robust and their framing required very little work over their long working life of 26-28 years. However, in the late 1940s and early 1950s the appearance of many of the vehicles changed significantly. The principal visible work was to 'modernise' their appearance. This took place over the period 1950 to 1955, the results differing substantially according to what was done so that no two vehicles were exactly alike.

From 1943 onwards, in order to replace the stencil indicators with roller blinds, the "piano" step on 1-30 was moved up to just below the front upper deck windows. This was not needed on 31-46, which had the higher step from new; 1-30 then looking the same as 31-46. From around mid-1945, the full-drop (1-30) or half-drop (31-59) side windows were replaced by sliding windows and the nearside lower deck extractor vents on 11-46 were panelled over.

In 1948/49, the shaped front cab panel, which was prone to accident damage and costly to replace, was replaced with a simple flat panel on 1, 3, 4, 6, 9, 13, 15, 21, 26, 28, 37, 39, 41, 43 and 46.

From late 1950 and in all of 1951 twelve (5, 8, 11, 14, 16, 22, 23, 25, 29, 30, 42, 44) were rebuilt by S H Bond Ltd at its works in Sharston, Manchester. The "piano front" of the body was rebuilt with a modern-styled front with a curved sloping profile with deep windscreens with steeply curved lower edges, clearly copied from Manchester's post-war Crossley trolleybuses. The shallow lower-deck side panels and two prominent guard rails beneath them were replaced with much deeper side panels and a single guard rail. They were painted in the grey roof livery, 22, 25, 29 and 44 had large-size shaded fleet numbers and the others the smaller shaded numbers; some later being repainted in the red with primrose band scheme. The Roe "waist rail" was removed on 44.

In 1952 Bond similarly rebuilt the bodies of four more (10, 17, 18, 20), they differed from the previous set in some small details, the most visible being the size of the sliding opening windows. SLT had hoped its own workshops would have capacity to do these but in the event this was not the case. They were painted in the red with primrose band livery with smaller-size shaded fleet numbers. After accident damage 10 subsequently had the front & foremost side upper-deck and cab windows fitted with rubber-set glazing.

In 1952 five 'in house' rebuilds were done in the Atherton workshops (12, 31, 32, 40, 41). The "Manchester" style front was fitted but aft of this the rebuild was simpler, retaining the shallow depth side panelling and two guard rails. They were finished in the red with primrose band livery with small shaded fleet numbers. Atherton's rebuilds had twin strips of beading in the centre of the front dome.

In 1953 two more, numbers 1 and 7, were given more comprehensive rebuilds with "Manchester" fronts, new, curved rear domes and all the windows set in rubber mounting. Number 1 was done by Bond and number 7 by SLT at Atherton. They differed in many details, not least the front upper deck. Both were finished in red with primrose band livery with sans serif fleet number transfers.

In 1954/55 four more (6, 24, 27, 28) were rebuilt by SLT in the Atherton workshops. Similar to the previous batch of five SLT rebuilds, the "Manchester" style of front was fitted and retaining the shallow depth side panelling and two guard rails. They differed in that their upper-deck windows (front & foremost side) plus cab side windows were set in rubber. 6, 24 and 28 had their nearside windscreens set in rubber glazing strip rather than a plated frame. They were painted red with primrose stripe with sans serif fleet numbers. It may well be that more were planned but the programme was stopped in 1955 on the retirement of E H Edwardes and, shortly after that, the decision to begin to abandon the trolleybus system. Also in 1954 Bolton-owned 48, which had been involved in a front-end collision, was fitted with a Manchester-style front in the Atherton workshops with rubber-strip glazing as on 27. It was the only highbridge trolleybus rebuilt in this way.

The pictures on the next page show each type of the major rebuilds for each batch. Dates and brief details of rebuilds for each batch are shown separately after the batch's main vehicle list.

Upper left: Rebuilt with flat panel but otherwise unchanged in appearance is number 4.

Upper right: Bond rebuild 5.

Centre left and right: Bond rebuild number 1 and SLT rebuild 7, both with new rounded rear domes.

Lower left: Bond rebuild 10 with its modified front windows after accident damage.

Lower right: 28 with rubber-set nearside windscreen.

There were noticeable differences in the 1952 and 1954/55 SLT rebuilds, principally at the upper deck front.

Right is 40 (1952), below is 24, the final rebuild completed 1955.

The shaped front panel was replaced on 49-53 and possibly 48 but only 48 (below) was rebuilt with a modernised front end - in March/April 1954 after its front was damaged in an accident. SLT did the work although it was a Bolton-owned bus.

1931/32

⊙ after fleet number = nearby picture

11-30

Chassis:	Guy BTX 3-axle
Motors:	Rees-Roturbo 60 hp
	These proved underpowered and their standard of workmanship "unsatisfactory". Over the years 1934-1938 all were replaced with 90hp motors, some exchanged with 90hp Metropolitan Vickers units taken from 31-46, and the remainder with new units. An explanatory note follows the vehicle details for trolleybuses 1-10.
Control equipment:	Metropolitan Vickers regenerative (13 vehicles, numbers not known) English Electric regenerative (7 vehicles, numbers not known)
Body maker:	Roe, teak frame
Seating:	L27/29R lowbridge The seats were arranged (from the front) upper deck: 4,4,3,4,3,4,3,2; lower deck: 5 rearward facing on the bulkhead, then 3 rows of forward facing seats (2x2) and longitudinal seats over the wheel arch for 6 each side. In later years the number, location and mix of the 4 and 3-seat rows varied, 30 was unique in having nine rows of upper-deck seating, although still totalling 27 seats.
Rebuilding:	The bodies were rebuilt several times - a description is given immediately after the vehicle detail for trolleybuses 1-10. Dates and brief details are listed in the separate section that follows the vehicle list for this batch.

St Helens service

When this started in June 1931, SLT trolleybuses that worked within St Helens had to have licences from the St Helens Hackney Carriage Office; this licence number was painted on the lower nearside rear of the body.

Subsequent owners

14/5/7/9, 22, 30 sold to Cubbins 2/57; sale then delayed until 7/57 as contingency for possible use during the fuel shortages resulting from the Suez war, None were used.

H Wallace was a motor dealer, probably with links to Cubbins.

Most of the vehicles sold to TPE in 8/58 were taken by TPE during the following month, the 8/58 sale date was to close SLT's accounts.

Most if not all of those that went to Colbro passed to Blamires, Bradford, for scrap

1933

⊙ after fleet number = nearby picture

31-46

Chassis:

Guy BT 2-axle

Motors:

Metropolitan Vickers 90 hp

From 1935 some, possibly all, of the 90hp motors were exchanged with the Rees Roturbo 60hp motors removed from Guy BTXs. The whole batch was subsequently fitted with new GEC 80hp motors; it is possible that some were fitted when the 90hp units were removed, without the vehicle getting a Rees unit. An explanatory note follows the vehicle details for trolleybuses 1-10.

Control equipment:

Metropolitan Vickers regenerative

Body maker:

Roe, teak frame

Seating:

L22/26R lowbridge

The seats were arranged (from the front) upper deck: 3,3,3,3,3,2,2; lower deck: 5 rows of forward facing seats (2x2) and longitudinal seats over the wheel arch for 3 each side

Rebuilding:

The bodies were rebuilt several times - a description of the modifications is given immediately after the vehicle detail for trolleybuses 1-10. Dates and individual vehicle details are listed in the separate section that follows the vehicle list for this batch.

Fifteen delivered in September and stored pending Bolton's completion of the overhead in its area. Bought for the Bolton – Leigh service, their seating capacity quickly proved too small and they were moved to the other services. The sixteenth, number 46, was exhibited on the Roe stand at the November 1933 Commercial Motor Show.

The batch proved troublesome when new, with severe vibrations and axle failures, not helped by a dispute between Guy and Metro Vickers as to the cause and Guy carrying "practically no spares". A frustrated SLT corrected the faults itself, recovering the cost from Guy Motors. The matter soured relationships with Guy Motors and, considering the then poor financial position of Guy Motors, LUT decided not to buy any more buses of any sort from the firm - something that the wartime Guy Arab would change drastically.

Trolleybuses that worked within St Helens had to have licences from the St Helens Hackney Carriage Dept and displayed this licence number on the back of the body.

45	○ TJ 3334	BT 23946	GO3020	12/33	4/58	8/58	TPE, scrap	St Helens Licence No 35 in 1935
46	○ TJ 3335	BT 23944	GO3019	12/33	11/56	7/57	Cubbins, scrap	St Helens Licence No 36 in 1935

Exhibited on the Roe stand at the November 1933 Commercial Motor Show

It is not proven but seems highly likely that 38 got St Helens Licence 29 in 1935 and that this was subsequently allowed to lapse.

Rebuilding

The dates are when the vehicle came back into service after rebuild. It has not been possible to establish months of start, completion etc for the rebuilding with the precision that we have achieved elsewhere in this book, due to a small batch of SLT ledgers and reports having been lost before the records were placed in the relevant archives. There is no significance in whether a rebuilt vehicle had a four- or six-leg trolley gantry. Those not shown getting a flat front panel in 1948-49 retained their original shaped panel until later rebuild or withdrawal.

31	12/50: out of service until 1952: body rebuilt by SLT with modernised front, side panels unchanged	40	1952: body rebuilt by SLT with modernised front, side panels unchanged

Subsequent owners

H Wallace was a motor dealer, probably with links to Cubbins.

31/4/9, 40/3/6 sold to Cubbins 2/57; sale then delayed until 7/57 as contingency for possible use during the fuel shortages resulting from the Suez war, none were used.

Most of the vehicles sold to TPE in 8/58 were taken by TPE during the following month, the 8/58 sale date was to close SLT's accounts.

Most if not all of those that went to Colbro passed to Blamires, Bradford, for scrap

1935

47

Acquired from: Guy Motors Ltd, 1/7/35
Chassis: Guy BTX 3-axle
Motors: GEC 70/75hp
Control equipment: English Electric regenerative
Body maker: Guy, timber frame
Seating: H27/29R highbridge
Modified: Roe-pattern cab/front panel 1938/9

47 Ø JW 5370 BTX 23637 (new -/31) 1/35 10/51 12/51 North, scrap

Built 1931, Guy Motors demonstrator; not registered until 7/34.

7/34- 12/34: ran on loan to Southend Corporation, fleet number 124.

1/1/35: SLT on loan from Guy, still in green livery with Southend fleet number 124

1/7/35: bought by SLT; numbered 47 but not immediately repainted into SLT livery

Little used after 1948, except for rush hour and driver tuition duties.

1936

⊙ after fleet number = nearby picture

When SLT announced its intention to convert its lines to trolleybus operation, Bolton Corporation was not enthusiastic, preferring to continue with trams, which operated a substantial route network in the town, and when SLT trolleybuses took over from trams on the Leigh – Bolton service in December 1933, Bolton continued to work the local service with tramcars. By 1936, Bolton had had second thoughts and decided to replace trams on this section with trolleybuses of its own.

Although committed to trams, it was considering wider use of trolleybuses but until a decision was made had no wish to incur the costs of operating a small fleet of them. It was therefore arranged that, although Bolton would put up and maintain the overhead within its boundaries, which it did until the end of the system in 1958, four vehicles to SLT specification would be ordered for this local service and that SLT would operate and crew them on Bolton's behalf, the municipality paying SLT for the running costs and debt charges. These four trolleybuses became Bolton's property after eight years (ending on 31/3/44) but to all intents and purposes were part of the SLT fleet. When new they worked exclusively on the Bolton local service, later their operation was usually (but not always) on it and the full Bolton – Leigh service. In the event, the war put a stop to plans for further trolleybuses in Bolton. The Corporation reconsidered the plans several times after the war but not with any real determination.

Although numbered in the SLT fleet, from 1/4/44 they were Bolton Corporation's property and thereafter were not included in SLT's fleet totals, although SLT continued to maintain, operate and crew them, Bolton continuing to pay the cost. When withdrawn they were returned to the Corporation which stored them in its Bridgeman St garage yard and then sold them for scrap.

48-51

Chassis: Leyland TTB4 3-axle
Motors: three (almost certainly 48-50): Metropolitan Vickers 90 hp
 one (almost certainly 51): GEC 90 hp,
 all replaced c1947/8 with Metropolitan Vickers 115hp
Control equipment: three (almost certainly 48-50): Metropolitan Vickers regenerative
 one (almost certainly 51): GEC regenerative
Body maker: Roe, teak frame
Seating: H35/29R highbridge
Modified: 48 28/2/54: out of service after accident on 27/2/54
 body rebuilt by SLT with modernised front; side panels unchanged
 5/54: returned to service (the only highbridge trolleybus modernised)
 48-51 -/48-9: flat front panel (48 not confirmed)

Subsequent owners

48-51 all sold by Bolton 7/56 to Bird, Stratford-on-Avon for scrap

Motor changes, trolleybuses 48-59

In 1946 SLT bought a number of new 115hp Metropolitan Vickers motors. Four were fitted to the Bolton vehicles, 48-51, the Corporation paying the cost, for which it was invoiced in 1949 although the motors may have been fitted some time before that. The other two motors were probably first fitted to 52 and 53 but this is not certain, as motors were changed when in need of servicing or repair and there are reports of 52-55 all having had 115hp motors at different times. In 1955 the SLT fleet list shows that by then 115hp motors were fitted to 52 and 54; there is no definitive information on how long they had been thus or to which other Leylands they may have been fitted from time to time.

71 Ø	HTD 868	60006	M3167	10/48	9/58	see below, TPE 12/58, used as store until 1963

71 was repainted and decorated for a single ceremonial journey from Atherton depot to Leigh and back on 1st September 1958, the day following the closure of the trolleybus system. As SLT had been wound up at midnight it carried LUT's name as legal owner and carried only invited passengers. However, along with 66-70 it had actually become TPE's property at midnight on 31/8/58 and was, presumably, the subject of an informal agreement for its use.

66/8-71 were also retained in a vain hope of finding a second hand purchaser. This appears to have been a joint agreement between TPE and SLT; the vehicles all became TPE property at midnight 31/8/58 but remained on LUT's premises until December.

1955-1957

By 1955 SLT had a considerable cash reserve and with its approaching winding up the board decided to use this to pay for new motor buses ordered by LUT, which would be legally owned by SLT but would carry LUT fleet names and be used by both companies. Thus, 46 motor buses new in 1955/56/57 were ordered by LUT and numbered 542-563, 570-593 in the LUT fleet. They carried SLT as legal owner but had Lancashire United fleetnames and were not restricted to working SLT services, although 570-581 were used initially at Hindley garage on the former trolleybus service to St Helens. The move may also have had tax advantages. 552-563 were transferred to LUT ownership on 31/12/56, being replaced in the SLT motor bus "fleet" by 570-593, which again had Lancashire United fleetnames. Numbers 542-551 and 570-593 (and all other assets of SLT) became LUT property at one minute past midnight on 31/8/58-1/9/58 when SLT ceased to exist.

The vehicles are listed briefly below; they are shown in full in the main LUT section of this book.

542-551	WTB 41-50	Guy Arab IV	NCME	H33/28R	New 1956
552-561	WTB 61-70	Atkinson PL745H	Roe	DP40F	New 1955
562-563	WTB 71-72	Leyland PSUC1/1	Weymann	B44F	New 1956
570-593	YTD 871-894	Daimler CVG5K	Metro-Cammell	H33/28R	New 1956/57

Myth: Guy Arab/Northern Counties 594-602 (311-319 ATC) have been quoted as SLT-owned. They were always owned by LUT.

CHAPTER xxxiii

An Act to transfer the undertaking of the South Lancashire Transport Company to Lancashire United Transport Limited to authorise the discontinuance of the services of trolley vehicles authorised under the South Lancashire Transport Acts and Order 1900 to 1948 and for other purposes. [23rd July 1958.]

WHEREAS—

(1) The South Lancashire Transport Company (hereinafter referred to as “the S.L.T. Company”) was incorporated by the South Lancashire Tramways Act 1900 by its then name of the South Lancashire Tramways Company and under the powers contained in the South Lancashire Tramways Acts 1900 to 1911 constructed a system of tramways in the county palatine of Lancaster:

(2) By the South Lancashire Transport Act 1929 the S.L.T. Company was authorised to abandon its said tramways and under the provisions of the South Lancashire Transport Acts and Order 1900 to 1948 the S.L.T. Company is now empowered to provide and run services of trolley vehicles on certain of the routes of its tramways and on other routes defined in the said Acts and Order and to provide and run services of omnibuses or public service vehicles:

(3) The issued share capital of the S.L.T. Company consists of seven hundred and fifty-four thousand five hundred and twenty-three shares of one pound each and each and all these shares are held by or on behalf of Lancashire United Transport Limited (hereinafter referred to as “the L.U.T. Company”):

1

(4) The requirements for passenger road transport in the area in the county palatine of Lancaster in which the services of trolley vehicles and omnibuses or public service vehicles of the S.L.T. Company are operated would be met more efficiently and economically by services of public service vehicles integrated with the other services of the L.U.T. Company:

(5) It is expedient that the S.L.T. Company's undertaking should be transferred to and vested in the L.U.T. Company together with all outstanding debts and liabilities and that the S.L.T. Company should be dissolved:

(6) It is expedient that the L.U.T. Company should be authorised to discontinue the services of trolley vehicles as in this Act provided and that the other provisions of this Act should be enacted:

(7) The objects of this Act cannot be effected without the authority of Parliament:

May it therefore please Your Majesty that it may be enacted and be it enacted by the Queen's most Excellent Majesty by and with the advice and consent of the Lords Spiritual and Temporal and Commons in this present Parliament assembled and by the authority of the same as follows:—

1. This Act may be cited as the South Lancashire Transport Act 1958.

2.—(1) In this Act unless the context otherwise requires—

“apparatus” includes all posts poles standards brackets cables conductors tubes mains transformers feeders wires and other apparatus and equipment provided for or in connection with the working and lighting of trolley vehicles and trolley vehicle routes;

“day of transfer” means the thirty-first day of October nineteen hundred and fifty-eight or such earlier date not being less than one month from the passing of this Act as the L.U.T. Company by resolution of the directors may determine;

“existing Acts and Order” means the South Lancashire Transport Acts and Order 1900 to 1948 which are set out in the schedule to this Act and includes all byelaws and regulations in force under those enactments or under any enactment incorporated therewith;

“local authority” and “statutory undertakers” have the same respective meanings as in the Local Government Act 1933;

“L.U.T. Company” means Lancashire United Transport Limited;

2

At midnight on 31 August 1958 the South Lancashire Transport Company ceased to exist. Next day, a luncheon was held to mark the occasion and a journey over a section of the route was arranged for the directors, local civic dignitaries and long-service crews. 71 was repainted and lettered for the trip but, as SLT was no longer in existence, it was licensed and insured by Lancashire United Transport Ltd, whose name it carried as legal owner.

LUT & SLT TICKETS

A history of LUT and SLT tickets requires a book to itself; these images are a representative selection.

31/1	31/1	31/1	31/1	31/1

Above are examples of the standard SLT tram and LUT bell-punch bus tickets; the reverse side was used for advertising and for the war effort during World War 2. The long ticket is the Williamson, Ashton-under-Lyne, "Willebrew", used on longer distance services - the machine clipped off a section of the ticket appropriate to the fare. Below are three examples of workman's weekly tickets - "Chloride" was at Clifton Junction in the Irwell Valley below Pendlebury - the firm's products included Exide car batteries.

Top is the Hall "Autographic" hand written ticket, below that is the Bell Punch Company's "Automaticket", again hand written, both used on the long distance services, in this example the X60 to Blackpool. On local services, after the bell punch, the company used the TIM machine - here are two examples, one for SLT/LUT. Next came the Setright - white tickets for normal use, red for longer distance.

The Videmat "self service" made a carbon copy image of the coins paid - it was used for a time on the Leigh-Bolton service. Finally (lower right) LUT (after an early trial) and the PTE turned to the Almex machine.

BANGOR BLUE

Background

The background to LUT's activities in North Wales and the formation and demise of the companies in which it became involved - Avery & Roberts Ltd, A&R (Motors) Ltd, Tourists' Hotels Ltd and Bangor Blue Motors Ltd - and the influence of the BET Group are described on pages 6 and 7 of this book.

Sources

Although there are no LUT archives for Bangor Blue, the company's operations were researched by the late Bruce Maund, whose notes we have used extensively. The Gwynedd County Archives have good motor taxation records, including copies of many log books, and there are some Companies House records for the various corporate bodies involved. Gustav Roberts was active in promoting the company and there are several reports in *The Commercial Motor* of the period that include fleet summaries (not always consistent). Together these sources have enabled a hopefully comprehensive record to be assembled, although full details of some, including most of the Liverpool-registered vehicles, are missing - the Liverpool Motor Tax records not having survived.

Charabanc seating

Local hackney carriage authorities varied in allowing passengers to sit in seats alongside the driver, some not permitting this whilst others allowed one, two, three or four. There were similar variations in the permitted seating adjacent to emergency exits on buses. As a result, smaller charabancs were variously given as 14, 16, 18, 20 or 21 seats, The larger 23- and 28-seaters were likewise sometimes quoted as 23, 24, 25, 26, 28, 29 or 30.

Avery and Roberts Ltd Liverpool

Formed: 15 October 1905

Partners: Gustav Roberts and Percy Avery (Avery resigned late 1921)

Registered office: 64 Stanley Street, to 154 Mount Pleasant, Liverpool, 1913, to 81 Renshaw Street, Liverpool, 1922 - the latter was also the firm's showroom.

Garage and workshops: rented section of LUT's garage at 5-7 Bentley Road, Liverpool; 1919-1931.

Motor dealer with agency for Dennis, Unic and other makes. Supplied vehicles to LUT, Tourists' Hotels and Bangor Blue; also operated taxis, some haulage and did war work during the war. Operated charabancs in Liverpool but this was not allowed under the agreement with LUT when Avery & Roberts Ltd became LUT's Liverpool agents and managers in 1919 - the agent and manager arrangement ceased in or about October 1927. Company wound up soon after Gustav Robert's death in 1931. The partners also owned A & R (Motors) Ltd (below).

A&R (Motors) Ltd Criccieth & Pwllheli

O after fleet number = nearby picture

There had been a previous Avery and Roberts company with this name that operated taxis in Liverpool. It was wound up in 1917, permission being given by Companies House in 1920 for re-use of the A&R (Motors) name.

Formed: 1920.

Partners: Gustav Roberts and Percy Avery (Avery resigned late 1921)

Registered office: 154 Mount Pleasant, Liverpool, moved to 81 Renshaw Street, Liverpool, 1922

Garages: Criccieth and Pwllheli

Service: Pwllheli - Criccieth - Portmadoc

Service sold to Crosville 1 October 1927; fleet taken into Bangor Blue, 30 September 1927

All vehicles supplied by Avery and Roberts Ltd. CC 147 and CC 149 were re-issued registrations. From 1922 to 1927 A&R (Motors) vehicles were often on hire to Bangor Blue and were sometimes shown in publicity as being owned by Bangor Blue. The reasons for the fleet being taken by Bangor Blue in September 1927 are explained on pages 6 and 7. KC 6303 may have had a Strachan & Brown body.

KA 4602

Tourists' Hotels Ltd (Motor Section)

Llangollen & Llanfairfechan

Name often quoted incorrectly at Tourist Hotels Ltd

Formed: 15 October 1919

Registered office: 154 Mount Pleasant, Liverpool; moved to 81 Renshaw Street, Liverpool, 1922

Shareholders: LUT, Gustav Roberts, several Merseyside businessmen.

Owned tourist-orientated hotels at Llangollen (Ponsonby Arms), Llanfairfechan (Queens Hotel) both from 1920 and Beddgelert (The Royal Goat Hotel), (January 1922), which were used for LUT and other operators' tours.

Vehicles kept at Ponsonby Arms, Llangollen and Queens Hotel, Llanfairfechan

In February 1922 Motor Section merged into Bangor Blue Motors Ltd. Hotel business insolvent December 1922 and refinanced with additional new owners; remained active until 1948, the hotels being requisitioned during the war.

Three new charabancs were purchased for the company's first operating season. Supplied by Avery & Roberts, TB 1098/99 were paid for by LUT and TB 1218 by A&R (Motors) Ltd. Also, LUT and A&R (Motors) charabancs were used as required, if in the area.

TB 1098	Dennis 3-ton "Subsidy A"	13247	Charlesworth	Ch28	3/20	2/22	to Bangor Blue - see pages 219/220
TB 1099	Dennis 3-ton "Subsidy A"	13248	Charlesworth	Ch28	3/20	2/22	to Bangor Blue - see pages 219/220
TB 1218	Daimler CK22	3176	not traced	Ch20	3/20	2/22	to Bangor Blue - see pages 219/220

The Dennis chassis numbers quoted may be engine numbers. TB 1098/99 chassis built 1919 for War Dept but not taken; TB 1218 reconditioned ex-War Department chassis. TB 1098/99 (and TB 1218) were never owned or operated by LUT.

Bangor Blue Motors Ltd

Bangor

1921

⊙ after fleet number = nearby picture

Registered 17 March 1921 with an authorised capital of £2,000, to operate charabancs and local services in Bangor.

Registered office: 280 High Street, Bangor.

Initial promoters appear to have included J & L Roberts, Bangor, and J Fred Francis & Sons Ltd, Colwyn Bay and possibly a Lancashire-based partner. Gustav Roberts had an interest by October 1921 - when CC 442 was acquired from North Wales Silver its place of ownership was registered as Avery and Roberts' Liverpool office. The business was taken over by LUT, A&R (Motors) Ltd and Tourists Hotels in February 1922.

Winstanley, Wigan, no date; void 1934

TB 1174 returned to supplying dealer in Lancashire, 2/22,

Leggott, Manchester, lorry, void 1932

Bangor Blue Motors Ltd

Bangor

1922 onwards

(LUT, A&R, Tourists' Hotels)

Bangor Blue's authorised capital was increased to £15,000 on 19 January 1922 and on or about 1 February 1922, control was acquired by Tourists' Hotels Ltd (4,780 £1 shares), Lancashire United Tramways Ltd (3,200 £1 shares) and A & R (Motors) Ltd (2,550 £1 shares) - LUT and Avery & Roberts Ltd both had a substantial holding in Tourists' Hotels Ltd and thereby together had a controlling interest in Bangor Blue.

Head office moved to 263 High Street, Bangor.

Liverpool office at Avery & Roberts/LUT offices at 81 Renshaw Street.

Directors: E H Edwardes, G A A Roberts, H England.

Secretary: Thomas Threlkeld (secretary of Avery & Roberts Ltd and A & R (Motors) Ltd); based at Renshaw Street.

Manager: C P Paige (to June 1924); C E V Carpenter (September 1924 to end) - both based at Bangor.

Livery: blue and white

The original partners left the business and some of the Leylands in the fleet were returned to or taken back by the Lancashire-based dealer that supplied them. As part of their investment, LUT and A&R (Motors) each provided two vehicles; Tourists' Hotels contributed its Motor Section.

A new 80-vehicle garage was built at Bryn Llwyd, Bangor. Buses were also based at Menai, Llanfairfechan (Queens Hotel), Llanrwst, Penmaenmawr (Central Buildings) and later at Beaumaris and Llangefni. A network of regular services based on Bangor was developed, serving Bethesda, Bettws-y-Coed, Caernarvon, Deiniolen, Holyhead, Penmaenmawr, Amlwch, Mallaeth Bay, Llangefni, Llanrwst and Llandegfan. An extensive full and half-day and evening tours programme operated from Bangor and Llanfairfechan

LUT's contribution was two newly-rebodied Dennis buses, which were painted into Bangor Blue livery at Atherton - the legal owner lettering of Bangor Blue vehicles was of the same oval shape as that of LUT. There is evidence that control was divided between LUT and Roberts - most chassis appear to have been supplied by Avery and Roberts Ltd, which had agencies for Dennis and Unic, whereas bodies were often supplied by LUT's chosen supplier of the time and were likely added to LUT orders.

Right: the new garage at Bryn Llwyd, Bangor.

Below: Advertisements for the three hotels - from the 1921 LUT touring brochure.

1922

Supplied by Avery & Roberts Ltd

CC 3211	Dennis 3-ton "Subsidy A"	12439	not traced	B20F	5/22	4/28	Llandudno Coaching
	<i>6/27: rebodied Ransomes Sims and Jefferies (637) B23F</i>						
CC 3228	Unic M10	2555	not traced	Ch20	5/22	1/26	Jack, Conway, lorry
	<i>Chassis new 1919; Motor Tax records indicate it had not been previously registered.</i>						
	<i>Appears to be part of an Avery and Roberts stock batch of seven, chassis numbers 2550-56</i>						
CC 3496	Ford TT	6486108	not traced	B14F	11/22	4/28	Llandudno Coaching

The seating, both before and after rebody, of CC 3211 seems small for a Dennis 3-ton Subsidy, which would usually have a 28 or 30-seat body. The chassis and engine numbers recorded in the vehicle's log book, are correct for a Subsidy A 3-ton and the type entered in that log book is "Subsidy". No satisfactory explanation of this has been found.

Subsequent owners

CC 3211 **Crosville**, 2/31 (already withdrawn)
 Blake, dealer, Salford, 4/31, converted to lorry
 G C Cook, London, dealer, 5/31
 Tuck Bros, London, lorry, scrapped 1934
 CC 3228 scrap 1928
 CC 3496 Blake, dealer, Salford, 1/31, scrap

CC 3228

1923

Chassis supplied by Avery & Roberts Ltd, body order arranged by LUT

CC 3872	Dennis 3-ton "Subsidy A"	13423	Strachan & Brown	B25F	5/23	4/28	Llandudno Coaching
	<i>Chassis built 1919 for War Dept but not taken</i>						
CC 3967	Dennis 3-ton	20084	Strachan & Brown	B30F	5/23	4/28	Llandudno Coaching
	<i>Chassis built for Samuelson, London; the order was cancelled</i>						
CC 3968	Dennis 3-ton	20085	Strachan & Brown	B30F	5/23	4/28	Llandudno Coaching
	<i>Chassis built for Samuelson, London; the order was cancelled</i>						

All three had Strachan & Brown's patented opening roof "roll top" body, similar to LUT's rebodied TB 1100/01. CC 3872 may have been new to an owner in the Isle of Man in 1919 or 1920 as a charabanc and traded in to Avery and Roberts in 1923 - see also CC 4637 and CC 4695 on page 222. CC 3967/68 were new chassis.

Used vehicles supplied by Avery & Roberts Ltd

?	Republic	not traced	not traced	Ch20	c4/23	c4/25	not traced
?	Unic M10	2552	not traced	Ch20	c4/23	4/28	sold for scrap
?	Unic M10	2553	not traced	Ch20	c4/23	4/28	sold for scrap
?	Unic M10	2554	not traced	Ch20	c4/23	4/28	sold for scrap

The Unics appear to be part of an Avery and Roberts stock batch of seven, chassis numbers 2550-56, new in 1919. They were not registered in Caernarvon and by the time they arrived with Bangor Blue were probably trade-ins to Avery & Roberts. It is likely that one was formerly MN 578, new 6/20 to Taxi and Automobile, Douglas, Isle of Man, returned to Avery & Roberts c8/23 and reregistered in Liverpool.

CC 7413	Guy B	22433	not traced	B24F	7/27	4/28	Llandudno Coaching

CC 7411: Chassis and engine numbers appear wrong for 1927 build. It is possible that it was an M10, chassis 2550 and had been in Avery and Roberts' stock for some years. See Unics on page 221.

CC 7412: Chassis number recorded by Bangor Blue (and perpetuated in motor tax and other subsequent operator records) as D 22059; there is a small possibility that it was 22454 and not 22054.

Myth: CC 7421 is given as a Bangor Blue Guy B in some lists - CC 7421 was a privately-owned BSA motor cycle.

Subsequent owners

CC 7114 **Crosville**, 2/31
 Blake, dealer, Salford, 10/31
 Hemmings, Pensnett, lorry, void 1938

Four West Riding Bristol 2-ton passed direct from West Riding to Llandudno Coaching

They were part of a batch of 12 new in 1924 and in process of being acquired by LUT and Bangor Blue from West Riding (numbers 189-200) in January 1927. Eight, HL 2036-2043, became LUT 103-110, the intent being that the other four (West Riding 189-192) should go to Bangor Blue. The emergent dispute over Bangor Blue caused the sale of the four to be put on hold; they were eventually sold by West Riding direct to Llandudno Coaching in April 1928.

In April 1932 Blakes had CC 4840, CC 7116, CC 7413 and HL 2034/35 for sale, as chassis. Blakes' date for CC 7413 was incorrect and the 'Manchester' address was 'advertiser's licence' - Blackfriars Road was (and still is) firmly in Salford. The firm also had a depot in Liverpool. In 1930 the company was J Blake & Co Ltd, renamed Blakes Motors Ltd early in 1931.

BLAKES MOTORS, Ltd.

C04840. Dennis, chassis 1924, fitted with pneumatic tyres all round and electric lighting, suitable for 2½ tons, price £36.

C07116. Dennis forward-control chassis, detachable cylinder head engine, pneumatic tyres all round and electric lighting, price £76.

C07413. Guy low-loading chassis, fitted with 30 h.p. engine, year of manufacture 1925, four-wheel brakes, electric lighting, 36-in. by 6-in. pneumatic tyres all round, price £75.

EY2741, EY2742, HL2033, HL2034. Bristols (four), forward-control chassis, fitted with 30 h.p. engines, showing long platform for bulk loads, suitable for 2 tons, fitted with 34-in. by 7-in. pneumatic tyres all round and electric lighting, price (each) £60.

OUR Sales Department is open until 8 p.m. each day, including Saturdays. Sundays by appointment.

BLACKFRIARS ROAD, Manchester.
PHONES, Blackfriars 7288-9 and 8037.

LUT & SLT SUNDRY VEHICLES

Whereas LUT's bus records are comprehensive, there is less information on what LUT referred to as its "sundry vehicles" fleet - a scarcity of information that persists into the 1970s. This list is the best that we have been able to assemble but is likely to be incomplete. Motor cars provided for staff members, for example as part of their remuneration package, have been excluded. Around 1923-25 LUT's "garage business" did casual garage work including overhauling and painting cars, charabancs and buses of private operators; this business also reconstructed a few cars for resale. There was no comprehensive numbering scheme for the sundry vehicles fleet; however, a few have been recorded with fleet numbers:

- TB 4728 - "No 1 Daimler wagon"
 - KB 1886 - "No 2 Daimler wagon"
 - HL 2038 - "Service Van No 3"
 - TE 7074 - "4F"
 - Unknown - "4A" (noted in 6/56)
- Nothing is known of Bangor Blue service vehicles, if any.

1900-1909

SLT

In the earlier years SLT used horse-drawn vehicles (tower wagons etc).

B 2161 ○	Leyland X	not traced	tower wagon	3/09	4/19 scrap

Comment

TC 3778/80	registration plates appear to have been exchanged in error during the war and Lancs CC Motor Tax Void Register shows their disposals reversed. The one carrying TC 3778 then ran on trade plates .
TC 3778	on trade plates from -/50; little used, derelict at Atherton by -/58
TC 3780	having been sold to Salford Corporation Gas Dept, c/45, it was bought back by SLT c9/49. The tower was removed and fitted to TJ 5739
TE 2774	ran on trade plates
TE 2781	taxed 1939-1944 as 4-ton goods vehicle
TE 7074	ran on trade plates
BTF 882, CTJ 57	"Badger" chassis, torque converter transmission, hydraulic ram operated tower.
CTJ 35	green livery

Subsequent owners

HL 2036	Edwardes of Langport Ltd, Somerset, workshop bus - the firm were plumbing and heating engineers, the owners were relations of E H Edwardes; vehicle extant 1952
TC 3778	TPE, -/59, scrapped 1960
TC 3780	derelict at Atherton -/53, sold for scrap by -/55
TC 9786	final owner Holden, showman, Rochdale; void 1947
TE 2781	Raven Garage, Prees Heath, 1/45, scrap
TE 7074	TPE, scrap 1960
BTF 882	TPE, licensed 1/60-2/60, then scrap; TPE used it for dismantling SLT overhead
CTJ 48	private owner; void 1958
CTJ 49	private owner; void 1961
CTJ 57	TPE, licensed 3/60 to 12/60, then scrap; TPE used it for dismantling SLT overhead
DTJ 695	private owner; void 1955
DTJ 696	private owner; void 7/65

Myth

CTJ 889 has frequently been recorded as a third Leyland Badger tower wagon. LUT/SLT had only two Badger tower-wagons, BTF 882 and CTJ 57; CTJ 889 was a Wolseley private car, never owned by SLT or LUT.

Newly converted Leyland TD1 TE 2774 with crane and axle dolly

TE 7074, TC 3778 and BTF 882.

1940-1949

SLT

Company names

The titles (at the relevant times) of the principal companies.

Manufacturers

ACV	See AEC.
ADC	Associated Daimler Co Ltd. Short-lived joint venture of AEC and Daimler in the 1920s.
AEC	Associated Equipment Co Ltd, Southall. Bus chassis maker, originally part of the London General group. In 1947/8 AEC acquired Crossley, Roe and Park Royal, a group parent company Associated Commercial Vehicles Ltd (ACV) being formed. Became member of the Leyland group in 1962.
Alexander	Walter Alexander & Company (Coachbuilders) Limited, Falkirk
Atkinson	Atkinson Lorries Ltd, Walton-le Dale, Preston. Renamed Atkinson Vehicles Ltd in 1954. Acquired by Seddon (q.v.) 1970.
Austin	Austin Motor Co Ltd, Longbridge, Birmingham. Merged with Nuffield Group (Morris) to form British Motor Corporation 1952.
Barton & Danson	Small coachbuilders based in Orrell, Wigan. Started 1925, closed 1931. Spin off from Massey.
Bedford	Brand name for vans, lorries and buses produced by Vauxhall Motors Ltd, Luton. UK subsidiary of General Motors Corporation.
BLMC, BMC	See British Leyland.
Bond	S H Bond Ltd, Sharston, Manchester. Long established commercial vehicle body maker, overhauled and rebuilt bus bodies in the late 1940s and 1950s, also built a small number of bus bodies.
Brill	J G Brill Co Ltd, Philadelphia, USA. Tramcar maker. Equipment used in UK by Milnes and by agents Witting Eborall Ltd.
Bristol	Bristol Tramways and Carriage Co Ltd, Bristol; member of Tilling group. Became Bristol Commercial Vehicles Ltd in 1943 and Leyland group 1966. Chassis and body maker; bodyworks known as BBW.
British Commercial	British Commercial Lorry & Engineering Co Ltd, Manchester. "BCLE". Short-lived dealer and coachbuilder.
British Electric Car Co	British Electric Car Co Ltd, Trafford Park, Manchester. 1902-1904. See United Electric Car Co.
British Leyland	British Leyland Motor Corporation Ltd. Formed 1968; merger of Leyland Motors with British Motor Corporation. Owned, inter alia, Leyland, Daimler, Guy, Bristol, ECW, Park Royal, Roe. Partly nationalised 1975 in government rescue, holding company becoming British Leyland.
British Motor Corporation	British Motor Corporation Ltd. (BMC). 1952 merger of Austin and Nuffield (Morris etc).
British Thomson Houston	British Thomson Houston, Rugby, Warwickshire. In 1928 became part of the AEI Group.
Bromilow & Edwards	Bromilow and Edwards Ltd, Bolton. Commercial vehicle body builders; made few bus bodies.
Brush	Brush Coachworks - division of the Brush Electrical Engineering Co Ltd, Loughborough.
BTH	See British Thomson Houston.
Burlingham	H V Burlingham Ltd, Blackpool. Bus and coach body builders.
Charlesworth	Charlesworth Bodies Ltd, Coventry. Charabancs body maker.
Commer	Commer Cars Ltd, Luton (part of the Rootes Group).
Coventry Climax	Coventry Climax Ltd, Coventry. Fork-lift truck maker, owned by Jaguar from 1963.
Crossley	Crossley Motors Ltd, Manchester. Bus and motor car maker. Became part of the ACV Group 1948.
Daimler	The Daimler Co Ltd, Coventry, subsidiary of Birmingham Small Arms Ltd; held rights to use the Daimler name on vehicles made in the UK. Renamed Transport Vehicles (Daimler) Ltd 1936. Business acquired by Jaguar Cars Ltd, 1958; merged with British Motor Corporation (BMC) 1966, becoming part of British Motor Holdings Ltd which merged with Leyland in 1968 to become British Leyland Motor Corporation. Daimler Fleetline production continued, being moved to Leyland in 1974.
David Brown	David Brown Ltd, Park Works, Huddersfield.
Davidson	Davidson (Trafford Park) Ltd, Manchester. Bus and commercial body builders.
Dennis	Dennis Brothers Ltd, Guildford. Bus and lorry chassis maker.
Duple	Duple Motor Bodies Ltd (at the relevant period). Hendon, London. Bus and coach body builders.
Duple (Midland)	Duple Motor Bodies (Midland) Ltd, Kegworth, Derbyshire. Subsidiary of Duple (above).
East Lancs	East Lancashire Coachbuilders Ltd, Blackburn. Bus body builders.
Eastwood & Kenning	Eastwood & Kenning Ltd, Manchester. Short-lived successors to Davidson.
ECW	Eastern Coachworks Ltd, Lowestoft. Bus and coach body builders. Part of Tilling group. See Bristol.
Eaton	Subsidiary of Eaton Corporation, USA. Axle maker in UK.
Electric Construction Co	Electric Construction Co Ltd, Wolverhampton. Tramcar maker.
English Electric	The English Electric Co Ltd. Built bus bodies at its Dick Kerr Works, Preston - ceased bus work in 1941.
FIAT	Fabbrica Italiana Automobili, Turin, Italy. Makers of FIAT cars, trucks etc.
Foden	Foden's Ltd, Sandbach, Cheshire. Lorry maker, made few buses.
Ford	Ford Motor Co Ltd, Trafford Park, Manchester to 1930, then Dagenham, Essex. UK subsidiary of Ford Motor Co, USA.
Gardner	L Gardner & Sons Ltd, Barton Hall Engine Works, Patricroft, Lancashire.
GEC	The General Electric Co Ltd, various locations.

Guy	Guy Motors Ltd, Fallings Park, Wolverhampton. Acquired by Jaguar Cars Ltd in 1961, merged with British Motor Corporation (BMC) 1966, becoming part of British Motor Holdings Ltd which merged with Leyland in 1968 to become British Leyland Motor Corporation; Guy UK-model bus production ended 1969.
Harry Jackson	Harry Jackson & Co, Openshaw, Manchester. Small commercial vehicle body maker.
Hillman	Subsidiary and brand of Rootes Motors Ltd (Hillman Car Co Ltd).
Hora	E & H Hora Ltd, London. Vehicle body builder.
Jackson	See Harry Jackson.
Karrier	Karrier Motors Ltd. It and Sunbeam were owned by the Rootes Group from 1934, the Karrier and Sunbeam trolleybus business was sold to the Brockhouse Group in 1945 and then to Guy Motors in 1948. The Karrier and Sunbeam chassis were identical, differing only in badging.
Leyland	Leyland Motors Ltd, Leyland, Lancs. See also Guy, Daimler, BLMC. Acquired Triumph cars and then Rover the holding company becoming the Leyland Motor Corporation
Leyland National	Leyland National Ltd, Workington. Built the Leyland National; part of British Leyland.
London Lorries	London Lorries Ltd, Kentish Town, London. Commercial vehicle body maker 1918-1933.
Marshall	Marshall's (Cambridge) Ltd; bus bodies built by Marshall Specialist Vehicles Division (Marshall SV).
Massey	Massey Bros, Pemberton, Wigan. Coachbuilders. Not a limited company at the time it supplied LUT.
Meadows	Henry Meadows Ltd, Wolverhampton. Maker of gearboxes and engines.
Mercedes Benz	Brand name of Daimler-Benz AG, Stuttgart.
Metropolitan Cammell	Metropolitan-Cammell Carriage Wagon and Finance Co Ltd, Saltley, (later Elmdon), Birmingham. Shared a joint sales company (Metropolitan Cammell Weymann Ltd) with Weymann's Ltd. Merged with Weymann in 1966 and then, strictly, became MCW Ltd. Major bus body builder.
Metropolitan Vickers	Metropolitan Vickers Electrical Co Ltd, Trafford Park, Manchester. Part of the AEI group from 1928.
Milnes	G F Milnes & Co Ltd, Hadley Castle, Shropshire, previously of Birkenhead. Tramcar body builder.
Milnes Voss	Milnes Voss & Co Ltd, Birkenhead. Tramcar body builder, separate firm from Milnes.
Morris	Morris Motors Ltd, Cowley, Oxford. Part of the Nuffield group. Merged with Austin to form British Motor Corporation 1952.
Morris Commercial	Subsidiary of Morris Motors Ltd. Made vans and lorries.
MoS	Ministry of Supply.
NCME	abbreviation for Northern Counties (see next line).
Northern Counties	Northern Counties Motor & Engineering Co Ltd, Wigan. Bus body builder.
Park Royal	Park Royal Vehicles Ltd, Park Royal, London. Major bus body builders. In ACV group from 1948.
Pelican	Pelican Engineering Co Ltd, Hunslet, Leeds. Gardner engine specialist.
Plaxton	Plaxton's (Scarborough) Ltd, Scarborough. Coachbuilders.
Ransomes Sims & Jefferies	Ransomes Sims & Jefferies Ltd, Orwell Works, Ipswich. Agricultural engineers; built a small number of vehicles including trolleybuses.
Rees-Roturbo	Rees Roturbo Manufacturing Co Ltd, electrical engineers, Wolverhampton. Closed 1936.
Republic	Republic Motor Truck Co, USA. Maker of truck and bus chassis.
Roe	Chas H Roe (1923) Ltd, Crossgates Carriage Works, Leeds.
Rover	The Rover Company Ltd, Solihull, Birmingham. Motor car maker. Became part of the Leyland Motor Corporation in 1967 and British Leyland in 1968.
RSJ	see Ransomes Sims & Jefferies Ltd
Samlesbury	Samlesbury Engineering Ltd, Samlesbury Airfield, Lancs. Body maker, built some bodies for Leyland. Name often mis-spelled Salmesbury.
Scott-Stirling	Scott-Stirling Motor Co, Twickenham. Early bus maker. Closed down 1908.
Seddon	Seddon Diesel Vehicles Ltd, Woodstock Factory, Oldham. Bus and lorry manufacturer.
Strachan	Strachan's Successors Ltd. Bus body builders.
Strachan & Brown	Strachan and Brown Ltd. Coachbuilders in the 1920s.
Sunbeam	Sunbeam Trolleybus Co Ltd, Wolverhampton. It and Karrier were owned by the Rootes Group from 1934, the trolleybus business was sold to the Brockhouse Group in 1945 and then to Guy Motors in 1948. The Karrier and Sunbeam chassis were identical, differing only in badging.
Traffic	Traffic Motor Truck Corporation, St Louis, USA.
Trojan	Trojan Ltd, Croydon. Owned by Leyland at the time; works in Kingston upon Thames.
Tylor	J B Tylor Ltd, made early engines (type JB4) for AEC. Often mis-spelled Tyler.
Unic	Automobiles Unic SA, France.
United Electric Car Co Ltd	Formed when the Electric Railway and Tramway Works Ltd, Preston took over G F Milnes and British Electric Car Co, 1905. Taken over by Dick, Kerr Ltd 1917; became part of English Electric in 1918.
Volvo	AB Volvo, Gothenburg, Sweden. Bus and car maker.
Westinghouse	British Westinghouse Electrical and Manufacturing Co Ltd, Trafford Park, Manchester. Built some tramcars. Acquired 1916 by Metropolitan Carriage & Wagon and Vickers Ltd and became Metropolitan Vickers (v.s.)
Weymann	Weymann's Ltd, Addlestone, Surrey, Major bus body builder. Shared a joint sales company (Metropolitan Cammell Weymann Ltd) with Metro Cammell, whose steel frame was used in Weymann bodies. Merged with Metro Cammell in 1986 and then, strictly, became MCW Ltd.

Willowbrook	Willowbrook Ltd, Loughborough. Coachbuilders.
Witting	Witting Bros Ltd (also Witting Eborall Ltd), London. Agents for and suppliers of electrical equipment.
Wolseley	Wolseley Motors Ltd. Subsidiary of the Nuffield group.
ZF	ZF Friedrichshafen AG, Germany. Gearbox maker.

Vehicle operators

Titles at the relevant times only; those given in full in the lists are not repeated here (for example Webster, Tognarelli, Lees).

Banfield	C W Banfield Ltd, London. Coach and contractor bus operator.
BET	British Electric Traction group, London. Major bus operating group, companies included BMMO, Ribble, Standerwick, North Western, Northern General, Yorkshire Woollen, Potteries, Trent. Became part of National Bus Co in 1968.
BMMO	Birmingham and Midland Motor Omnibus Co Ltd - better known as Midland Red. Large bus & coach operator that built its own vehicles. Part of the BET group.
City Coach Co	City Coach Co Ltd, Brentwood, Essex. Coach operator.
Crosville	Crosville Motor Services Ltd, Chester.
Glover	T Glover, Haydock. Coach operator.
Hunt	R Hunt & Sons, Bickerstaffe, Lancs. Coach operator.
Jersey Motor Transport	Jersey Motor Transport Co Ltd, St Helier, Jersey, CI.
Lamb	J Lamb, Appley Bridge, Wigan. Coach operator. Later at Upholland.
Lansdowne	Lansdowne Luxury Coaches Ltd (owned by the Leader family), Leytonstone, London. Coach operator - also dealt in used buses - see AMCC in next section.
LGOC	London General Omnibus Co Ltd. The principal London bus operator. Predecessor to London Transport.
London Transport	London Transport Executive, nationalised body responsible for transport in London.
MacShane	D & G MacShane Ltd, Liverpool. Coach and contract hire operator.
Midland Red	see BMMO.
Midway	Midway Garage & Haulage, Orrell Street, Wigan.
Moss	George Moss Ltd, Leigh. Builders and contractors. Works bus.
Northern General	Northern General Transport Co Ltd, Gateshead. Major operator, member of the BET group and then the National Bus Co.
North Western	North Western Road Car Co Ltd, Stockport. Bus operator, part of BET group.
Ortona	Ortona Motor Co Ltd, Cambridge. Early bus operator in the city, became part of Eastern Counties O C Ltd
Potteries	Potteries Motor Traction Ltd, Stoke on Trent. Major operator, member of the BET group and then the National Bus Co.
Ribble	Ribble Motor Services Ltd, Frenchwood, Preston. Major operator, member of the BET group and then the National Bus Co.
Spring Side Paper Mills	Charles Turner & Sons Ltd, Belmont, Bolton, paper makers. Works bus.
Standerwick	W C Standerwick Ltd, Blackpool. Subsidiary of Ribble.
Tilling	Major bus group, competitor to the BET. Became nationalised in 1948 and the basis of the National Bus Co. in 1968.
Toft Bros & Tomlinson	Toft Brothers & Tomlinson Ltd, Darley Dale, Derbyshire. Hauliers.
Trent	Trent Motor Traction Ltd, Derby. Major operator, member of the BET group and then the National Bus Co.
Tyne-Tees-Mersey	Pool of operators that ran express services from Newcastle to Liverpool. Principal companies were LUT, Northern General, North Western, United , West Yorkshire and Yorkshire Woollen.
United	United Automobile Services Ltd, Darlington. Major operator, member of the Tilling group and then the National Bus Co.
Waterdale	Waterdale Dyeing and Finishing Co Ltd, Mereclough Works, Prestwich. Works bus.
West Riding	West Riding Automobile Co Ltd, Wakefield. Similar size to LUT, independent operator not part of any group at the time of the book.
West Yorkshire	West Yorkshire Road Car Co Ltd, Harrogate. Tilling group company.
Yelloway	Yelloway Motor Services Ltd, Rochdale. Independent coach and express service operator.
Yorkshire Woollen	Yorkshire Woollen District Transport Co Ltd, Dewsbury. Major operator, member of the BET group and then the National Bus Co.

Dealers and dismantlers

Adamson	W Adamson, vehicle dealer, Bolton (associated with or maybe proprietor of Kenyon, Trafford Bar)
Allsop	Thomas Allsop Ltd, Sheffield, dealer in used commercials and buses. Located at Norton Aerodrome, Woodseats and then Penistone Road, Hillsborough at the relevant time.
AMCC	Long established trading name of the vehicle dealing business owned by the Leader family's Lansdowne Luxury Coaches Ltd, Leytonstone, London. AMCC itself was not a registered company.
Barnsley area breakers	From the late 1960s into the 1990s there was a plethora of small and medium-sized breakers in this area, some run by coal miners during their off-shift hours. For most of this period, there was a lucrative market for used Gardner and Leyland engines which agents would buy from the scrap dealer and ship to Hong Kong for use in Chinese off-shore boats. The yards were confusing and vehicles often passed from one to another. To a large degree which firm scrapped what bus and if they did so on behalf of some other breaker is of no relevance. The firms included: Paul Sykes, J Sykes, M Meynell, D Higgs, C F Booth, D Rollinson, Hartwood Exports, T Goodwin, K Askin, Wombwell Diesels, Whiting Brothers, D C Morris, G P Ripley, A C Ripley, T Wigley, Hardwick, Passenger Vehicles Sales ("PVS"). Some were sole traders, groups of family members or partnerships, others registered limited companies.
Blair	R Blair, yard off London Road, Manchester. Dismantler; sold some buses, many for use as holiday caravans.
Blake	Blake's Motors Ltd, Blackfriars Street, Salford. Dealer in used lorries. Also had branch in Liverpool.
Colbro	Colbro Ltd, Jawbone Works, Rothwell, Leeds. Dealer in used buses. Worked closely with PVD (q.v.)
Cowley	Frank Cowley, Blackfriars Rd, Salford (major dealer in used buses; not a limited company at the relevant time); yards at Pennington (Leigh), Fallowfield and an early one at Prestwich. LUT shareholder in the 1960s.
Cubbins	Partnership of S J & R Cubbins, various yards in Farnworth. Bus dismantlers. The Cubbins family also had a substantial fairground business with several showman's vehicles.
Ensign	Ensign Bus Ltd, Grays, Essex. Major bus dealer.
Hitchen	J M Hitchen, dealer and vehicle breaker, Edward Street Garage, Chorley.
Kenyon	Kenyon, vehicle breaker, Trafford Bar, Stretford (see also Adamson).
Kirkby, KBSL	Kirkby group, North Anston, Yorkshire. Major bus and coach dealer. Detailed explanation on page 162.
Lister	G Lister, used passenger vehicle dealer, Bolton.
Martin	Based in Weaverham and later in Middlewich, Cheshire. Initially an operator of coaches and contract vehicles, developed into a major dealer in used buses. Various trading names were used at different times, including Martin & Sons Ltd (to 1975), Martin's Bus and Coach Sales Ltd (1976 on) and others.
Millburn	E & N Sanderson, trading as Millburn Garage. Postwar registered as Millburn Motors Ltd. Glasgow based but with additional premises at Bamber Bridge/Walton-le Dale and then Walmer Bridge, both near Preston.
North	J W North, Hull, moved to Leeds 1934; later W North of Leeds Ltd (by then owned by the Kaye family) and then W North's (Passenger Vehicles) Ltd. Yards at Stourton and Whinmoor, then moved to Sherburn in Elmet Aerodrome. Major dealer in used buses. Also traded as 'Dismantlers & Autowreckers'.
PVD	Passenger Vehicle Disposals Ltd, Dunchurch. Dealer in used buses and coaches.
TPE	Transport (Passenger Equipments) Ltd, Macclesfield. Used vehicle dealer. Yards at Heatley, Moss Lane Macclesfield, Bollington (Altrincham). Also used Butley Ash yard of J C Broadhead. Owned by Walter Charnock, previously Sales Manager and Designer for S H Bond's bus activities.
Warburton	S Warburton, vehicle breaker, Warrington.
Woodward	Woodward's (Atherton) Ltd, Atherton. Dealer in cars and commercials; also ran a small coach fleet.

323, 332 and 327 and three others behind them await the scrapman's torch in TPE's yard at Macclesfield on 23rd October 1963.

TAILPIECE - LUT

The buses that occupied more hours of the authors' time and caused them more headaches than all the rest put together were Leyland LT1 Lions 153-188, 189-205 and LT2s 206-225. New in 1929, 1930 and 1931 respectively, their withdrawal began early in 1936 and was to have been completed in 1940/41. War intervened and those still in stock were kept, some continuing in service, some converted to ambulances and others put into store. The changes in plan for their withdrawal resulted in their fleet numbers clashing with new buses and as a result several had three or even four fleet numbers in the space of a few years.

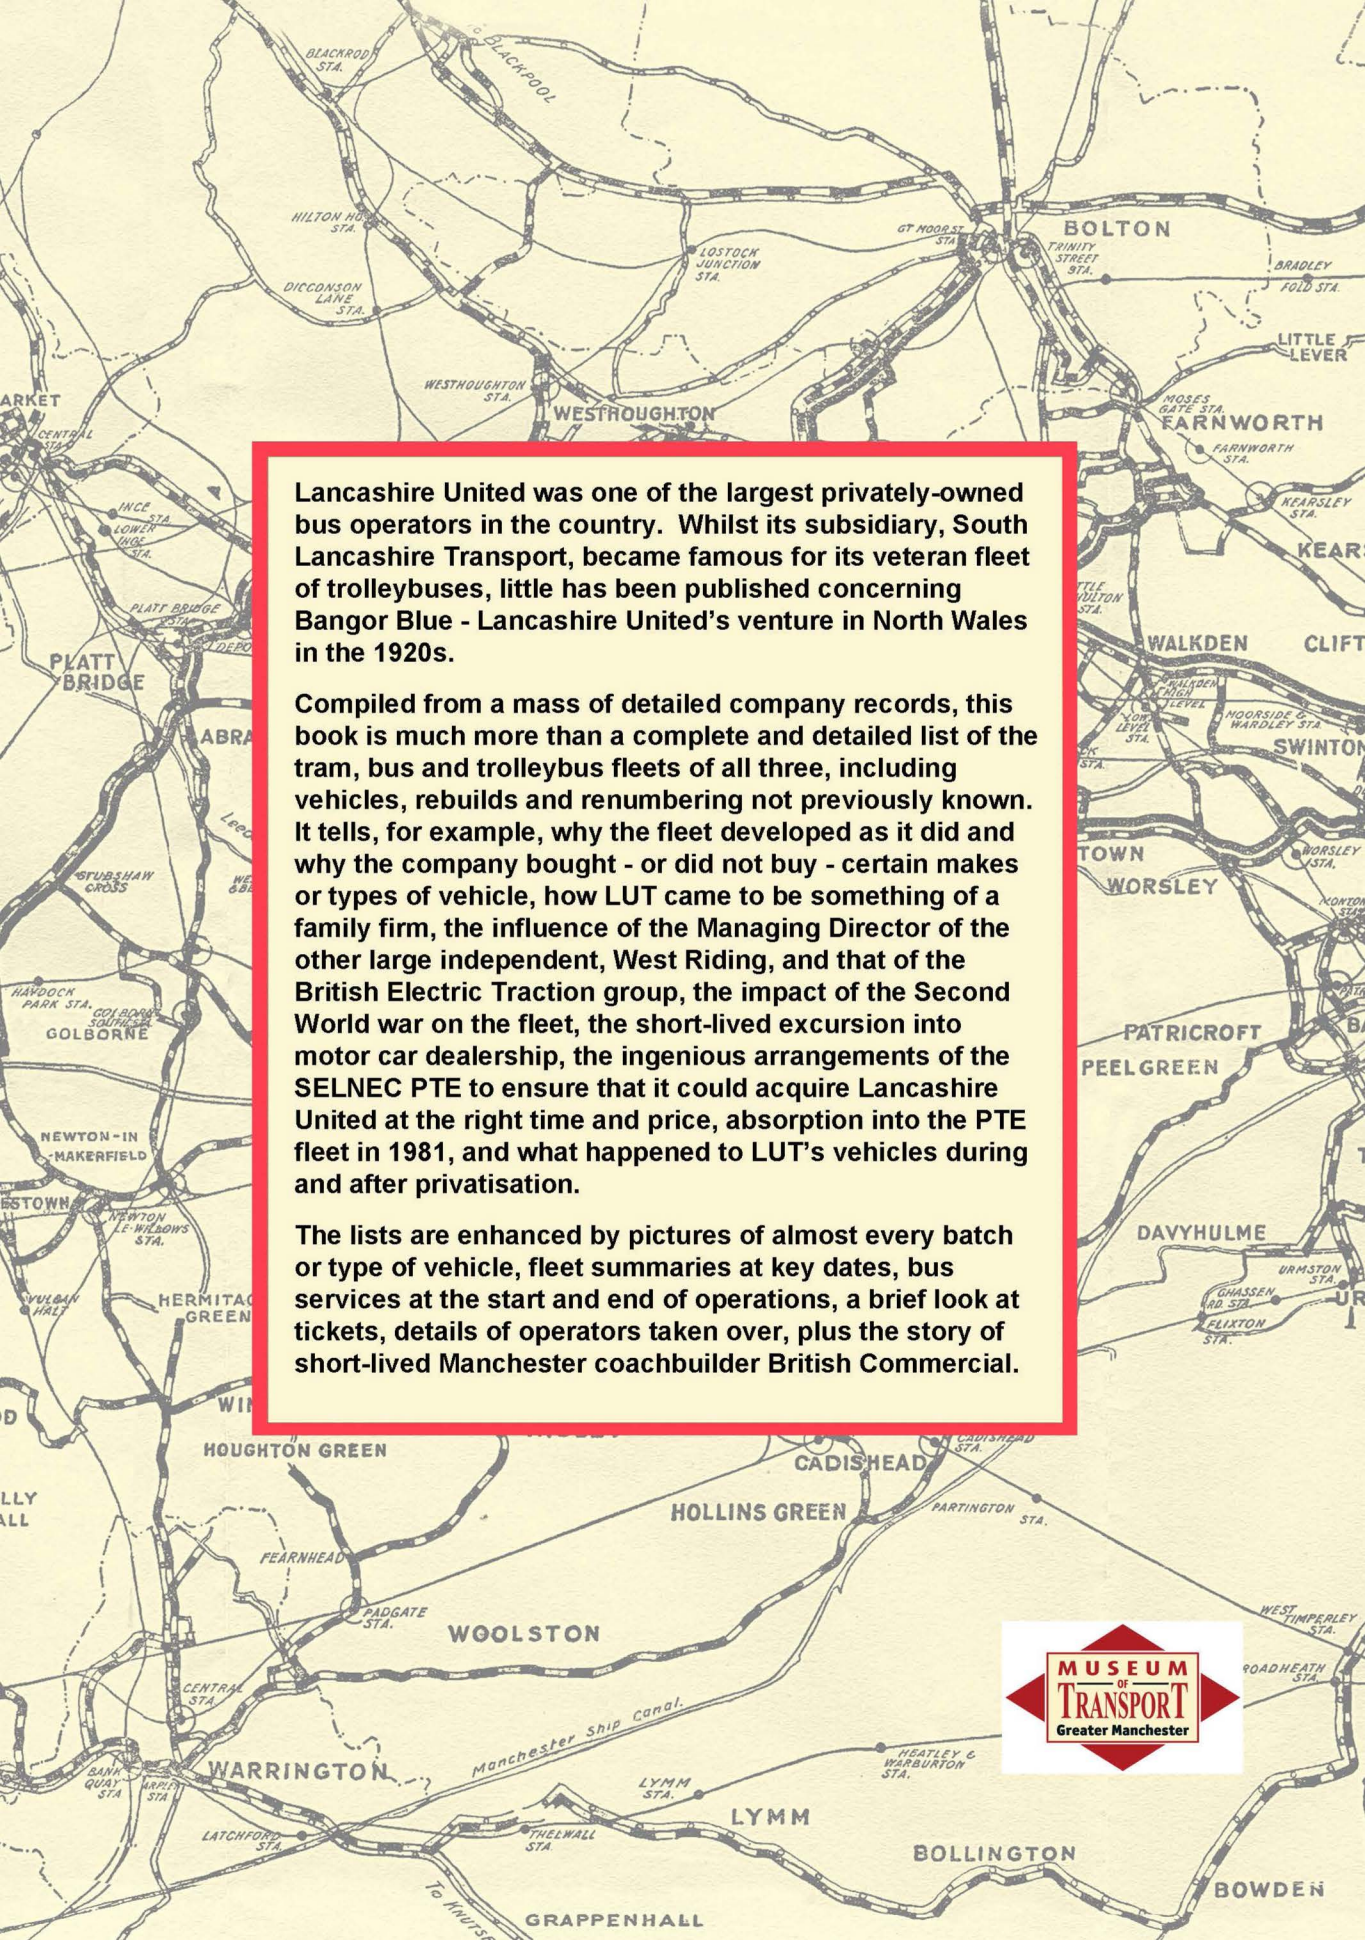

When the war ended many were sold and went on to new lives, including fifteen bought by motor car manufacturer Rover to run workers' services to its new factory at Solihull. Others were overhauled and put back into LUT service, the last being withdrawn in November 1948.

New in March 1929, Davidson-bodied TE 7068 started life as 167, then became 178 and finally 197. Withdrawn in January 1947 it was retained in store as a hedge against late delivery of new buses and not sold until April 1948 - by that time it had a radiator from an LT2 of the 206-225 batch, complete with LANCASHIRE UNITED radiator badge. It was bought by paper makers Charles Turner & Sons Ltd to take workers to the firm's Spring Side Paper Mills at Belmont, on the moors outside Bolton. It ran for them until September 1952 when it was traded in to Salford dealer Frank Cowley, in whose Pennington, Leigh, yard this picture of it was taken by Chris Heaps.

TAILPIECE - SLT

In the year 2017 there is very little left of SLT other than items rescued for preservation - principally SLT car 65 and the stone lintel from the main entrance to the Howe Bridge offices, which are now in the Museum of Transport, Greater Manchester, (www.gmts.co.uk) along with LUT buses 27 (1959 Guy Arab), 97 (1962 Daimler Fleetline) and LUT's AEC Matador recovery vehicle, but at least one smaller item has survived against all the odds. At the time of writing, this cast iron and concrete inspection cover over what was a tramway electrical cable chamber remained undisturbed and in excellent condition at Pennington Mill Bridge on the route of SLT's Lowton tramway. Few of those who drive along St Helens Road notice it, let alone have any idea of its age or history. These pictures, taken by local historians John and Yvonne Eckersley, make a fine ending to this book.

Lancashire United was one of the largest privately-owned bus operators in the country. Whilst its subsidiary, South Lancashire Transport, became famous for its veteran fleet of trolleybuses, little has been published concerning Bangor Blue - Lancashire United's venture in North Wales in the 1920s.

Compiled from a mass of detailed company records, this book is much more than a complete and detailed list of the tram, bus and trolleybus fleets of all three, including vehicles, rebuilds and renumbering not previously known. It tells, for example, why the fleet developed as it did and why the company bought - or did not buy - certain makes or types of vehicle, how LUT came to be something of a family firm, the influence of the Managing Director of the other large independent, West Riding, and that of the British Electric Traction group, the impact of the Second World war on the fleet, the short-lived excursion into motor car dealership, the ingenious arrangements of the SELNEC PTE to ensure that it could acquire Lancashire United at the right time and price, absorption into the PTE fleet in 1981, and what happened to LUT's vehicles during and after privatisation.

The lists are enhanced by pictures of almost every batch or type of vehicle, fleet summaries at key dates, bus services at the start and end of operations, a brief look at tickets, details of operators taken over, plus the story of short-lived Manchester coachbuilder British Commercial.
